

IMX93IEC

i.MX 93 Applications Processors Data Sheet for Industrial Products

Rev. 7 — 12 February 2026

Product data sheet

- For functional characteristics and the programming model, see *i.MX 93 Applications Processor Reference Manual* (IMX93RM).

1 i.MX 93 introduction

The i.MX 93 family represents NXP’s latest power-optimized processors for smart home, building control, contactless HMI, IoT edge, Automotive, and Industrial applications.

The i.MX 93 includes powerful dual Arm® Cortex®-A55 processors with speeds up to 1.7 GHz integrated with a NPU that accelerates machine learning inference. A general-purpose Arm® Cortex®-M33 running up to 250 MHz is for real-time and low-power processing. Robust control networks are possible via CAN-FD interface. Also, dual 1 Gbps Ethernet controllers, one supporting Time Sensitive Networking (TSN), drive gateway applications with low latency.

The i.MX 93 Industrial qualified part is particularly useful for applications such as:

- Industrial human machine interface (HMI)
- Industrial vision
- Scanning and printing
- EV Charging
- Industrial automation
- Touchless access control
- Energy meter
- Energy grid equipment

Table 1. Features

| Subsystem | Features |
|-----------------------------|--|
| Cortex®-A55 MPCore platform | Two Cortex®-A55 processors operating up to 1.7 GHz <ul style="list-style-type: none"> • 32 KB L1 Instruction Cache • 32 KB L1 Data Cache • 64 KB per-core L2 cache • Media Processing Engine (MPE) with Arm® Neon™ technology supporting the Advanced Single Instruction Multiple Data architecture • Floating Point Unit (FPU) with support of the Arm® VFPv4-D16 architecture |
| | Supports of 64-bit Arm® v8.2-A architecture |
| | 256 KB cluster L3 cache |
| | Parity/ECC protection on L1 cache, L2 cache, and TLB RAMs |
| Cortex®-M33 core platform | <ul style="list-style-type: none"> • Stand by monitoring with Cortex®-A55 and other high-power modules power gated |
| | Cortex®-M33 CPU operating up to 250 MHz <ul style="list-style-type: none"> • Supports FPU • Supports MPU • Supports NVIC • Supports FPB |

Table continues on the next page...

Table 1. Features ...continued

| Subsystem | Features |
|------------------------------|---|
| | <ul style="list-style-type: none"> • Supports DWT and ITM • Two-way set-associative 16 KB System Cache with parity support • Two-way set-associative 16 KB Code Cache with parity support • 256 KB tightly coupled memory (TCM) |
| Neural Processing Unit (NPU) | <p>Neural Network performance (256 MACs operating up to 1.0 GHz and 2 OPS/MAC)</p> <ul style="list-style-type: none"> • NPU targets 8-bit and 16-bit integer RNN • Handles 8-bit weights |
| Image Sensor Interface (ISI) | <ul style="list-style-type: none"> • Standard pixel formats commonly used in many camera input protocols • Programmable resolutions up to 2K • Image processing for: <ul style="list-style-type: none"> — Supports one source of up to 2K horizontal resolution — Supports pixel rate up to 200 Mpixel/s • Image down scaling via decimation and bi-phase filtering • Color space conversion • Interlaced to progressive conversions |
| On-chip memory | Boot ROM (256 KB) for Cortex®-A55 |
| | Boot ROM (256 KB) for Cortex®-M33 |
| | On-chip RAM (640 KB) |
| External memory interface | <p>16-bit DRAM interface:</p> <ul style="list-style-type: none"> • LPDDR4X/LPDDR4 with inline ECC • Supports up to 2 Gbyte DDR memory space |
| | <p>Three Ultra Secure Digital Host Controller (uSDHC) interfaces:</p> <ul style="list-style-type: none"> • One eMMC 5.1 (8-bit) compliance with HS400 DDR signaling to support up to 400 MB/sec • One SDXC (4-bit, no eMMC5.1, with extended capacity) • One SDIO (4-bit, SD/SDIO 3.01 compliance with 200 MHz SDR signaling and up to 100 MB/sec) |
| | <p>FlexSPI Flash with support for XIP (for Cortex®-A55 in low-power mode) and support for either one Octal SPI or Quad SPI FLASH device. It also supports both Serial NOR and Serial NAND flash using the FlexSPI.</p> |
| Pixel Pipeline (PXP) | <ul style="list-style-type: none"> • BitBlit • Flexible image composition options—alpha, chroma key |

Table continues on the next page...

Table 1. Features ...continued

| Subsystem | Features |
|------------------------------------|--|
| | <ul style="list-style-type: none"> • Porter-Duff operation • Image rotation (90°, 180°, 270°) • Image resize • Color space conversion • Multiple pixel format support (RGB, YUV444, YUV422, YUV420, YUV400) • Standard 2D-DMA operation |
| LCDIF Display Controller | <p>The LCDIF can drive any of three displays:</p> <ul style="list-style-type: none"> • MIPI DSI: up to 1920x1200p60 • LVDS Tx: up to 1366x768p60 or 1280x800p60 • Parallel display: up to 1366x768p60 or 1280x800p60 |
| MIPI CSI-2 Interface | <p>One 2-lane MIPI CSI-2 camera input:</p> <ul style="list-style-type: none"> • Complaint with MIPI CSI-2 specification v1.3 and MIPI D-PHY specification v1.2 • Supports up to 2 Rx data lanes (plus 1 Rx clock lane) • Supports 80 Mbps – 1.5 Gbps per lane data rate in high speed operation • Supports 10 Mbps data rate in low power operation |
| MIPI DSI Interface | <p>One 4-lane MIPI DSI display with data supplied by the LCDIF</p> <ul style="list-style-type: none"> • Compliant with MIPI DSI specification v1.2 and MIPI D-PHY specification v1.2 • Capable of resolutions achievable with a 200 MHz pixel clock and active pixel rate of 140 Mpixel/s with 24-bit RGB. • Supports 80 Mbps—1.5 Gbps data rate per lane in high speed operation • Supports 10 Mbps data rate in low power operation |
| Audio | <ul style="list-style-type: none"> • Three SAI interfaces: <ul style="list-style-type: none"> — SAI1 supports 2 lanes TX and 1 lane RX — SAI2 supports 4 lanes TX and RX — SAI3 supports 1 lane TX and RX — SAI2 and SAI3 support glue-less switching between PCM and stereo DSD operation • One SPDIF supports raw capture mode that can save all the incoming bits into audio buffer • 24-bit PDM supports up to 8-microphones (4 lanes) |
| GPIO and input/output multiplexing | General-purpose input/output (GPIO) modules with interrupt capability |
| | Input/output multiplexing controller (IOMUXC) to provide centralized pad control |

Table continues on the next page...

Table 1. Features ...continued

| Subsystem | Features |
|------------------|---|
| Power management | Temperature sensor with programmable trip points |
| | Flexible power domain partitioning with internal power switches to support efficient power management |
| Connectivity | Two USB 2.0 controllers and PHYs interfaces |
| | Two Controller Area Network (FlexCAN) modules, each optionally supporting flexible data-rate (FD) |
| | Two Improved Inter Integrated Circuit (I3C) modules |
| | Two 32-pin FlexIO modules |
| | Three Ultra Secure Digital Host Controller (uSDHC) interfaces |
| | Two Ethernet controllers (capable of simultaneous operation): <ul style="list-style-type: none"> • One Gigabit Ethernet controller with support for Energy Efficient Ethernet (EEE), Ethernet AVB, and IEEE 1588 • One Gigabit Ethernet controller with support for TSN in addition to EEE, Ethernet AVB, and IEEE 1588 |
| | Eight Low Power SPI (LPSPi) modules |
| | Eight Low Power I2C modules |
| | Eight Low Power Universal Asynchronous Receiver/Transmitter (LPUART) modules: <ul style="list-style-type: none"> • Programmable baud rates up to 5 Mbps |
| Security | Trusted Resource Domain Controller (TRDC) <ul style="list-style-type: none"> • Supports 16 domains |
| | Arm® TrustZone® (TZ) architecture, including both Trustzone-A and Trustzone-M |
| | On-chip RAM (OCRAM) secure region protection using OCRAM controller |
| | EdgeLock® secure enclave |
| | Battery Backed Security Module (BBSM) <ul style="list-style-type: none"> • Secure real-time clock (RTC) |
| System debug | Arm® CoreSight™ debug and trace technology |
| | Embedded Trace FIFO (ETF) with 4 KB internal storage to provide trace buffering |

Table continues on the next page...

Table 1. Features ...continued

| Subsystem | Features |
|-----------|---|
| | Unified trace capability for dual core Cortex [®] -A55 and Cortex [®] -M33 CPUs |
| | Cross Triggering Interface (CTI) |
| | Support for 4-pin (JTAG) debug interface and SWD |

1.1 Ordering information

Table 2 provides examples of orderable part numbers covered by this Data Sheet.

Table 2. Ordering information

| Part number | Part differentiator | Number of Cores (A55) | Max speed | NPU | GDET | Camera | Display | Connectivity | Audio | DDR | Package |
|--------------------------------------|---------------------|-----------------------|-----------|-----|----------|--|--|--|------------|----------|---------------------------|
| MIMX9352C VVXMAB MIMX9352C VVXMAC | 5 | 2 | 1.7 GHz | NPU | Disabled | <ul style="list-style-type: none"> 2-lane 1080p30 MIPI CSI Parallel camera | <ul style="list-style-type: none"> 4-lane 1080p60 MIPI DSI 4-lane LVDS Parallel display | <ul style="list-style-type: none"> 2x GbE 2x USB 2.0 | 7x I2S TDM | 3.7 GT/s | 11 x 11 mm, 0.5 mm pitch |

[1] Only support Low Drive mode

Figure 1 describes the part number nomenclature so that characteristics of a specific part number can be identified (for example, cores, frequency, temperature grade, fuse options, and silicon revision). The primary characteristic which describes which data sheet applies to a specific part is the temperature grade (junction) field.

- The i.MX 93 Applications Processors for Commercial Products Data Sheet (IMX93CEC) covers parts listed with a "D (Commercial temp)"
- The i.MX 93 Applications Processors for Industrial Products Data Sheet (IMX93IEC) covers parts listed with a "C (Industrial temp)"
- The i.MX 93 Applications Processors for Extended Industrial Products Data Sheet (IMX93XEC) covers parts listed with a "X (Extended Industrial temp)"
- The i.MX 93 Applications Processors for Automotive Products Data Sheet (IMX93AEC) covers parts listed with an "A (Automotive temp)"

Ensure to have the proper data sheet for specific part by verifying the temperature grade (junction) field and matching it to the proper data sheet. If there are any questions, visit the web page nxp.com/IMX or contact an NXP representative for details.

2 Block diagram

Figure 2 shows the functional modules in the i.MX 93 processor system.^[1]

[1] Some modules shown in this block diagram are not offered on all derivatives. This block diagram may also show less modules than available in some derivatives. See Table 2 for details.

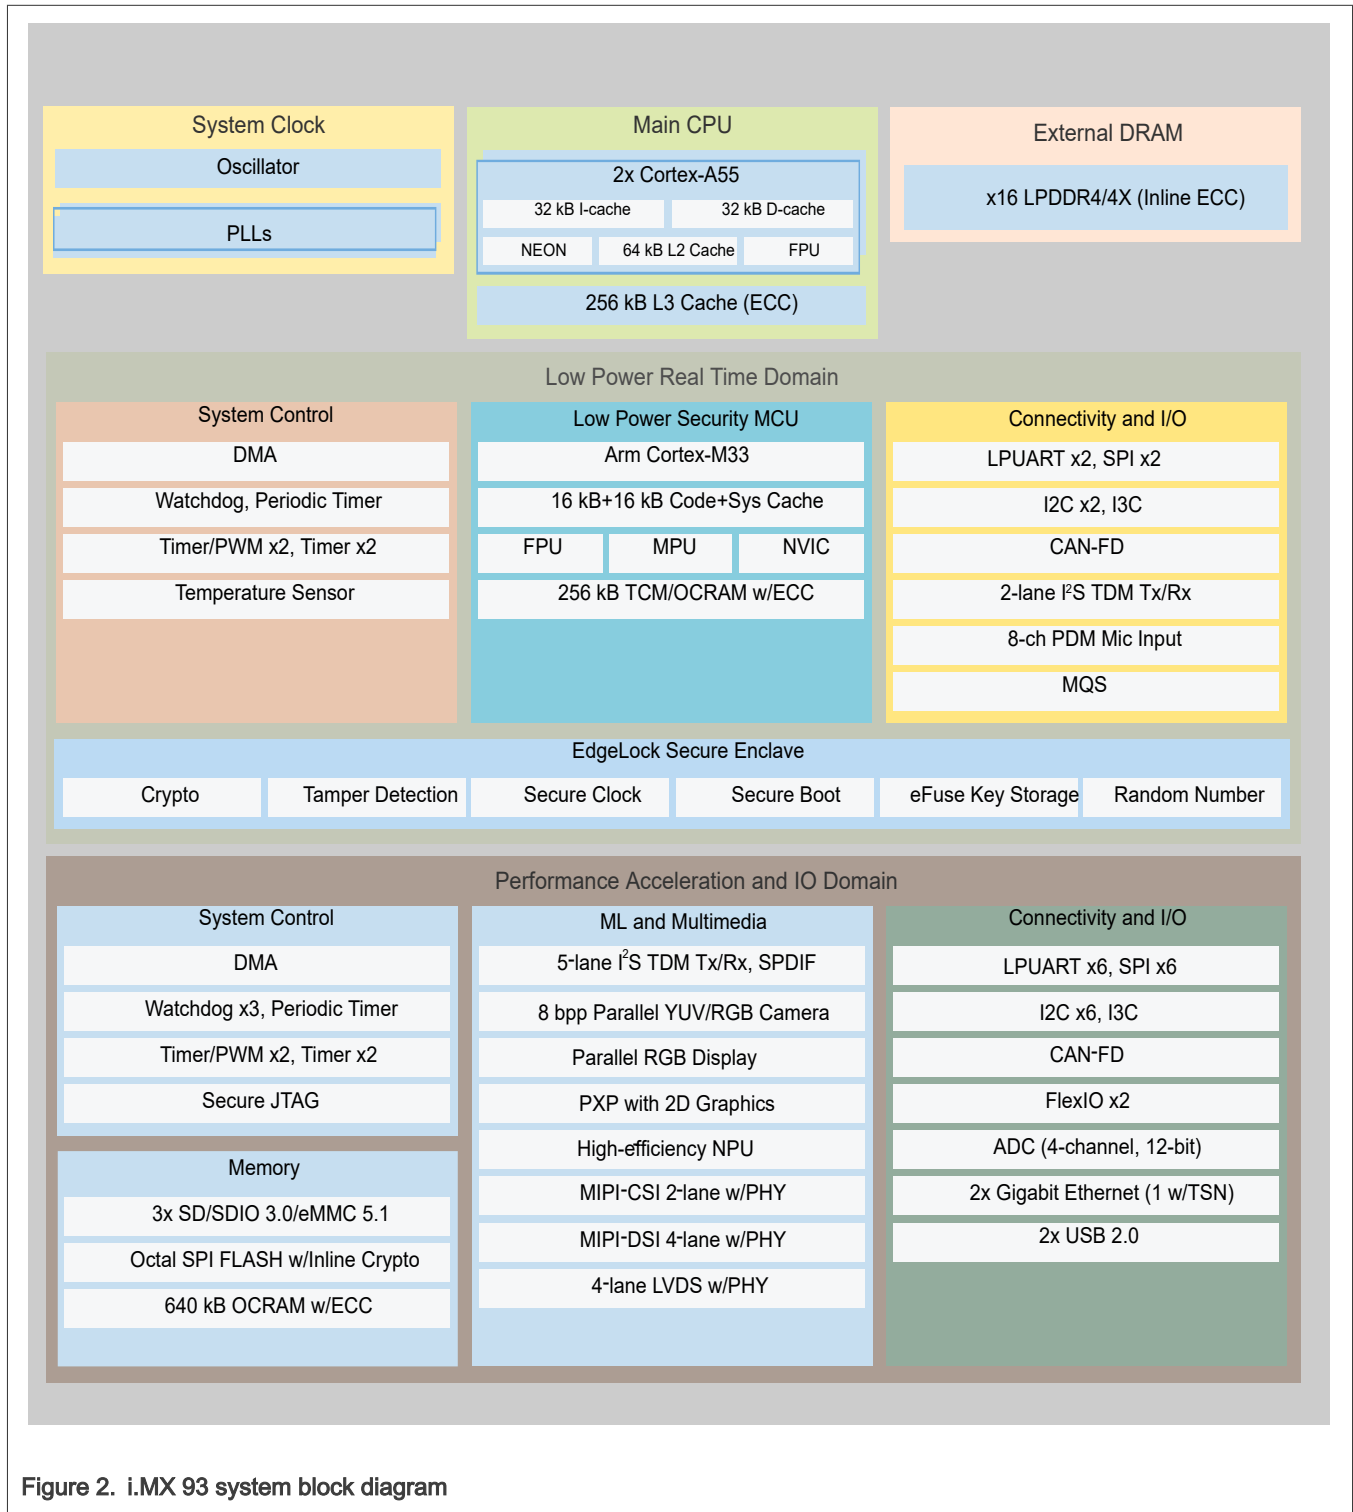

Figure 2. i.MX 93 system block diagram

3 Special signal considerations

Table 3 lists special signal considerations for the i.MX 93 processors. The signal names are listed in alphabetical order.

The package contact assignments can be found in [Package information and contact assignments](#). Signal descriptions are provided in the *i.MX 93 Reference Manual (IMX93RM)*.

Table 3. Special signal considerations

| Signal Name | Remarks |
|---------------------|--|
| CLKIN1/CLKIN2 | CLKIN1 and CLKIN2 are input pins without internal pull-up and pull-down. An external 10K pull-down resistor is recommended if they are not used. |
| NC | These signals are No Connect (NC) and should be unconnected in the application. |
| ONOFF | A brief connection to GND in the OFF mode causes the internal power management state machine to change the state to ON. In the ON mode, a brief connection to GND generates an interrupt (intended to be a software-controllable power-down). A connection to GND for a period of time longer than the value configured in the BBNSM_CTRL[BTN_TIMEOUT] causes a forced OFF (PMIC_ON_REQ output "L"), as long as there is no pending RTC alarm event or tamper event. |
| POR_B | POR_B has no internal pull-up/down resistor, and requires external pull-up resistor to NVCC_BBSM_1P8. It is recommended that POR_B is properly handled during power up/down. Please see the EVK design for details. |
| RTC_XTALI/RTC_XTALO | To hit the exact oscillation frequency, the board capacitors must be reduced to account for the board and chip parasitics. The integrated oscillation amplifier is self-biasing, but relatively weak. Care must be taken to limit the parasitic leakage from RTC_XTALI and RTC_XTALO to either the power or the ground (> 100 MΩ). This de-biases the amplifier and reduces the start-up margin. If you want to feed an external low-frequency clock into RTC_XTALI, the RTC_XTALO pin must remain unconnected or driven by a complementary signal. The logic level of this forcing clock must not exceed the NVCC_BBSM_1P8 level and the frequency shall be < 50 kHz under the typical conditions. |
| XTALI_24M/XTALO_24M | The system requires 24 MHz on XTALI/XTALO. The crystal cannot be eliminated by an external 24 MHz oscillator. If this clock is used as a reference for USB, then there are strict frequency tolerance and jitter requirements. See Clock sources and relevant interface specifications chapters for details. |

3.1 Unused input and output guidance

If a function of the i.MX 93 is not used, the I/Os and power rails of that function can be terminated to reduce overall board power. [Table 4](#) is recommended connectivities for LVDS and other digital I/Os. [Table 5](#) is recommended connectivities for MIPI. [Table 6](#) is recommended connectivities for USB.

Table 4. Unused function strapping recommendations

| Function | Ball name | Recommendations if unused |
|----------|--|---------------------------|
| ADC | ADC_IN0, ADC_IN1, ADC_IN2, ADC_IN3 | Tie to ground |
| TAMPER | TAMPER0, TAMPER1 | Tie to ground |
| LVDS | LVDS_CLK_P, LVDS_CLK_N, LVDS_Dx_P, LVDS_Dx_N | Not connected |

Table continues on the next page...

Table 4. Unused function strapping recommendations ...continued

| Function | Ball name | Recommendations if unused |
|----------------------|--|--|
| | VDD_LVDS_1P8 | Tie to ground through 10 K resistors without change |
| Digital I/O supplies | NVCC_GPIO, NVCC_WAKEUP, NVCC_AON, NVCC_SD2 | Tie to ground through 10 KΩ resistors if entire bank is not used |

Table 5. MIPI strapping recommendations

| Function | Ball name | Recommendations |
|------------------------------------|--|-----------------|
| Only MIPI_CSI used | VDD_MIPI_0P8, VDD_MIPI_1P8 | Supply |
| | MIPI_DSI1_CLK_P, MIPI_DSI1_CLK_N, MIPI_DSI1_Dx_P, MIPI_DSI1_Dx_N | Not connected |
| Only MIPI_DSI used | VDD_MIPI_0P8, VDD_MIPI_1P8 | Supply |
| | MIPI_CSI1_CLK_P, MIPI_CSI1_CLK_N, MIPI_CSI1_Dx_P, MIPI_CSI1_Dx_N | Not connected |
| Neither MIPI_CSI nor MIPI_DSI used | VDD_MIPI_0P8, VDD_MIPI_1P8 | Tie to ground |
| | MIPI_CSI1_CLK_P, MIPI_CSI1_CLK_N, MIPI_CSI1_Dx_P, MIPI_CSI1_Dx_N | Not connected |
| | MIPI_DSI1_CLK_P, MIPI_DSI1_CLK_N, MIPI_DSI1_Dx_P, MIPI_DSI1_Dx_N | Not connected |
| | MIPI_REXT | Tie to ground |

Table 6. USB strapping recommendations

| Function | Ball name | Recommendations |
|----------------------------|--|-----------------|
| Only USB1 used | VDD_USB_3P3, VDD_USB_1P8, VDD_USB_0P8 | Supply |
| | USB2_VBUS, USB2_D_P, USB2_D_N, USB2_ID, USB2_TXRTUNE | Not connected |
| Only USB2 used | VDD_USB_3P3, VDD_USB_1P8, VDD_USB_0P8 | Supply |
| | USB1_VBUS, USB1_D_P, USB1_D_N, USB1_ID, USB1_TXRTUNE | Not connected |
| Neither USB1 nor USB2 used | VDD_USB_3P3, VDD_USB_1P8, VDD_USB_0P8 | Tie to ground |
| | USB1_VBUS, USB1_D_P, USB1_D_N, USB1_ID, USB1_TXRTUNE | Not connected |
| | USB2_VBUS, USB2_D_P, USB2_D_N, USB2_ID, USB2_TXRTUNE | Not connected |

4 Electrical characteristics

This section provides the device and module-level electrical characteristics for the i.MX 93 family of processors.

4.1 Chip-level conditions

This section provides the device-level electrical characteristics for the IC. See [Table 7](#) for a quick reference to the individual tables and sections.

Table 7. i.MX 93 chip-level conditions

| For these characteristics, ... | Topic appears ... |
|--|--|
| Absolute maximum ratings | Absolute maximum ratings |
| Thermal resistance | Thermal resistance |
| Operating ranges | Operating ranges |
| Clock sources | Clock sources |
| Maximum supply currents | Maximum supply currents |
| Power modes | Power modes |
| Power supplies requirements and restrictions | Power supplies requirements and restrictions |

4.1.1 Absolute maximum ratings

CAUTION

Stresses beyond those listed in the following table may reduce the operating lifetime or cause immediate permanent damage to the device. The table below does not imply functional operation beyond those indicated in the operating ranges and parameters table.

Table 8. Absolute maximum ratings

| Parameter description | Symbol | Min | Max | Unit | Notes |
|--|--|------|-------|------|-------|
| Core supplies input voltages | VDD_SOC | -0.3 | 1.15 | V | — |
| GPIO supply voltage | NVCC_GPIO, NVCC_WAKEUP, NVCC_AON | -0.3 | 3.8 | V | — |
| I/O supply for SD2 | NVCC_SD2 | -0.3 | 3.8 | V | — |
| DDR PHY supply voltage | VDD2_DDR | -0.3 | 1.575 | V | — |
| DDR I/O supply voltage | VDDQ_DDR | -0.3 | 1.575 | V | — |
| I/O supply and I/O Pre-driver supply for BBSM bank | NVCC_BBSM_1P8 | -0.3 | 2.15 | V | — |
| USB VBUS input detected | USB1_VBUS, USB2_VBUS | -0.3 | 3.95 | V | — |
| Power for USB OTG PHY | VDD_USB_0P8 | -0.3 | 1.15 | V | — |

Table continues on the next page...

Table 8. Absolute maximum ratings ...continued

| Parameter description | Symbol | Min | Max | Unit | Notes |
|-----------------------------------|------------------|------|----------------|------|-------|
| | VDD_USB_1P8 | -0.3 | 2.15 | V | — |
| | VDD_USB_3P3 | -0.3 | 3.95 | V | — |
| MIPI PHY supply voltage | VDD_MIPI_0P8 | -0.3 | 1.15 | V | — |
| | VDD_MIPI_1P8 | -0.3 | 2.15 | V | — |
| LVDS PHY supply voltage | VDD_LVDS_1P8 | -0.3 | 2.15 | V | — |
| Analog core supply voltage | VDD_ANA_0P8 | -0.3 | 1.15 | V | — |
| | VDD_ANAx_1P8 | -0.3 | 2.15 | V | [1] |
| Input/output voltage range [2] | V_{in}/V_{out} | -0.3 | NVCC_XXX + 0.3 | V | — |
| Storage temperature range | $T_{STORAGE}$ | -40 | 150 | °C | — |

[1] VDD_ANAx_1P8 refers to VDD_ANA0_1P8, VDD_ANA1_1P8, and VDD_ANAVDET_1P8.

[2] Input and output voltages on the GPIO pins must remain within a minimum of -300 mV and a maximum of NVCC_XXX + 300 mV, where NVCC_XXX is the operational GPIO supply voltage at the SoC. These limits include any DC offsets from the driving device as well as any AC transients—such as overshoot or undershoot—occurring during signal switching.

Table 9. Electrostatic discharge and latch-up ratings

| Parameter description | | Rating | Reference | Comment |
|-------------------------------|--|---------|-----------|---------|
| Electrostatic Discharge (ESD) | Human Body Model (HBM) | ±1000 V | JS-001 | — |
| | Charged Device Model (CDM) | ±250 V | JS-002 | — |
| Latch-up (LU) | Immunity level: • Class II @ 105 °C ambient temperature | A A | JESD78 | — |

4.1.2 Thermal resistance

4.1.2.1 14 x 14 mm FCBGA package thermal characteristics

Table 10 lists the 14 x 14 mm FCBGA package thermal resistance data.

Table 10. 14 x 14 mm FCBGA thermal resistance data

| Rating | Board Type ^[1] | Symbol | Values | Unit |
|---|---------------------------|-----------------|--------|------|
| Junction to Ambient Thermal Resistance ^[2] | JESD51-9, 2s2p | $R_{\theta JA}$ | 21.7 | °C/W |
| Junction-to-Top of Package | JESD51-9, 2s2p | Ψ_{JT} | 0.1 | °C/W |

4.1.3 Power architecture

The i.MX power architecture is designed with the expectation that a dedicated PMIC supplies all required power rails, ensuring compliance with stringent power-up and power-down sequencing requirements. While discrete component-based implementations are technically viable, they typically lead to increased BOM cost, greater design complexity, and a larger PCB footprint. In contrast, the proposed PMIC solution is BOM-optimized, minimizes board area by integrating multiple power functions into a single package, and simplifies system design by providing a validated, production-tested power management solution that inherently meets the voltage and sequencing specifications of the i.MX platform.

NVCC_BBSM_1P8 must be powered first and stay until the last.

The digital logic inside chip will be supplied with VDD_SOC, which can be nominal or overdrive voltage or a "Low Drive" voltage.

The DRAM controller and PHY have multiple external power supplies:

Table 13. Power supplies of the DRAM controller and PHY

| Power supplies | Modules |
|----------------|---|
| VDD_SOC | SoC synthesized DRAM controller digital logic |
| VDD_ANA_0P8 | DRAM PLL and PHY digital logic |
| VDD_ANAx_1P8 | DRAM PLL and PHY analog circuitry |
| VDD2_DDR | 1.1 V DRAM PHY I/O supply |
| VDDQ_DDR | 0.6 V DRAM PHY I/O supply for LPDDR4X |

For all the integrated analog modules, their 1.8 V analog power will be supplied externally through power pads. These supplies are separated with other power pads on the package to keep them clean, but they can be directly shared with other power rails on the board to reduce the number of power supplies from the PMIC.

For the integrated LVDS PHY, MIPI PHY, and USB PHYs, their 3.3 V (where supported), 1.8 V, and digital power will be supplied externally through power pads. The powers to those PHYs are separated with other power pads on the package to keep them clean, but they can be directly shared with other power rails on the board to reduce the number of power supplies from the PMIC.

For BBSM/RTC, the 1.8 V I/O pre-driver supply and 1.8 V I/O pad supply will also be supplied externally. The BBSM_LP core digital domain logic is supplied by an internal LDO.

[Figure 3](#) is the power architecture diagram for the whole chip. Note that it only shows power supplies, and does not show capacitors that may be required for internal LDO regulators.

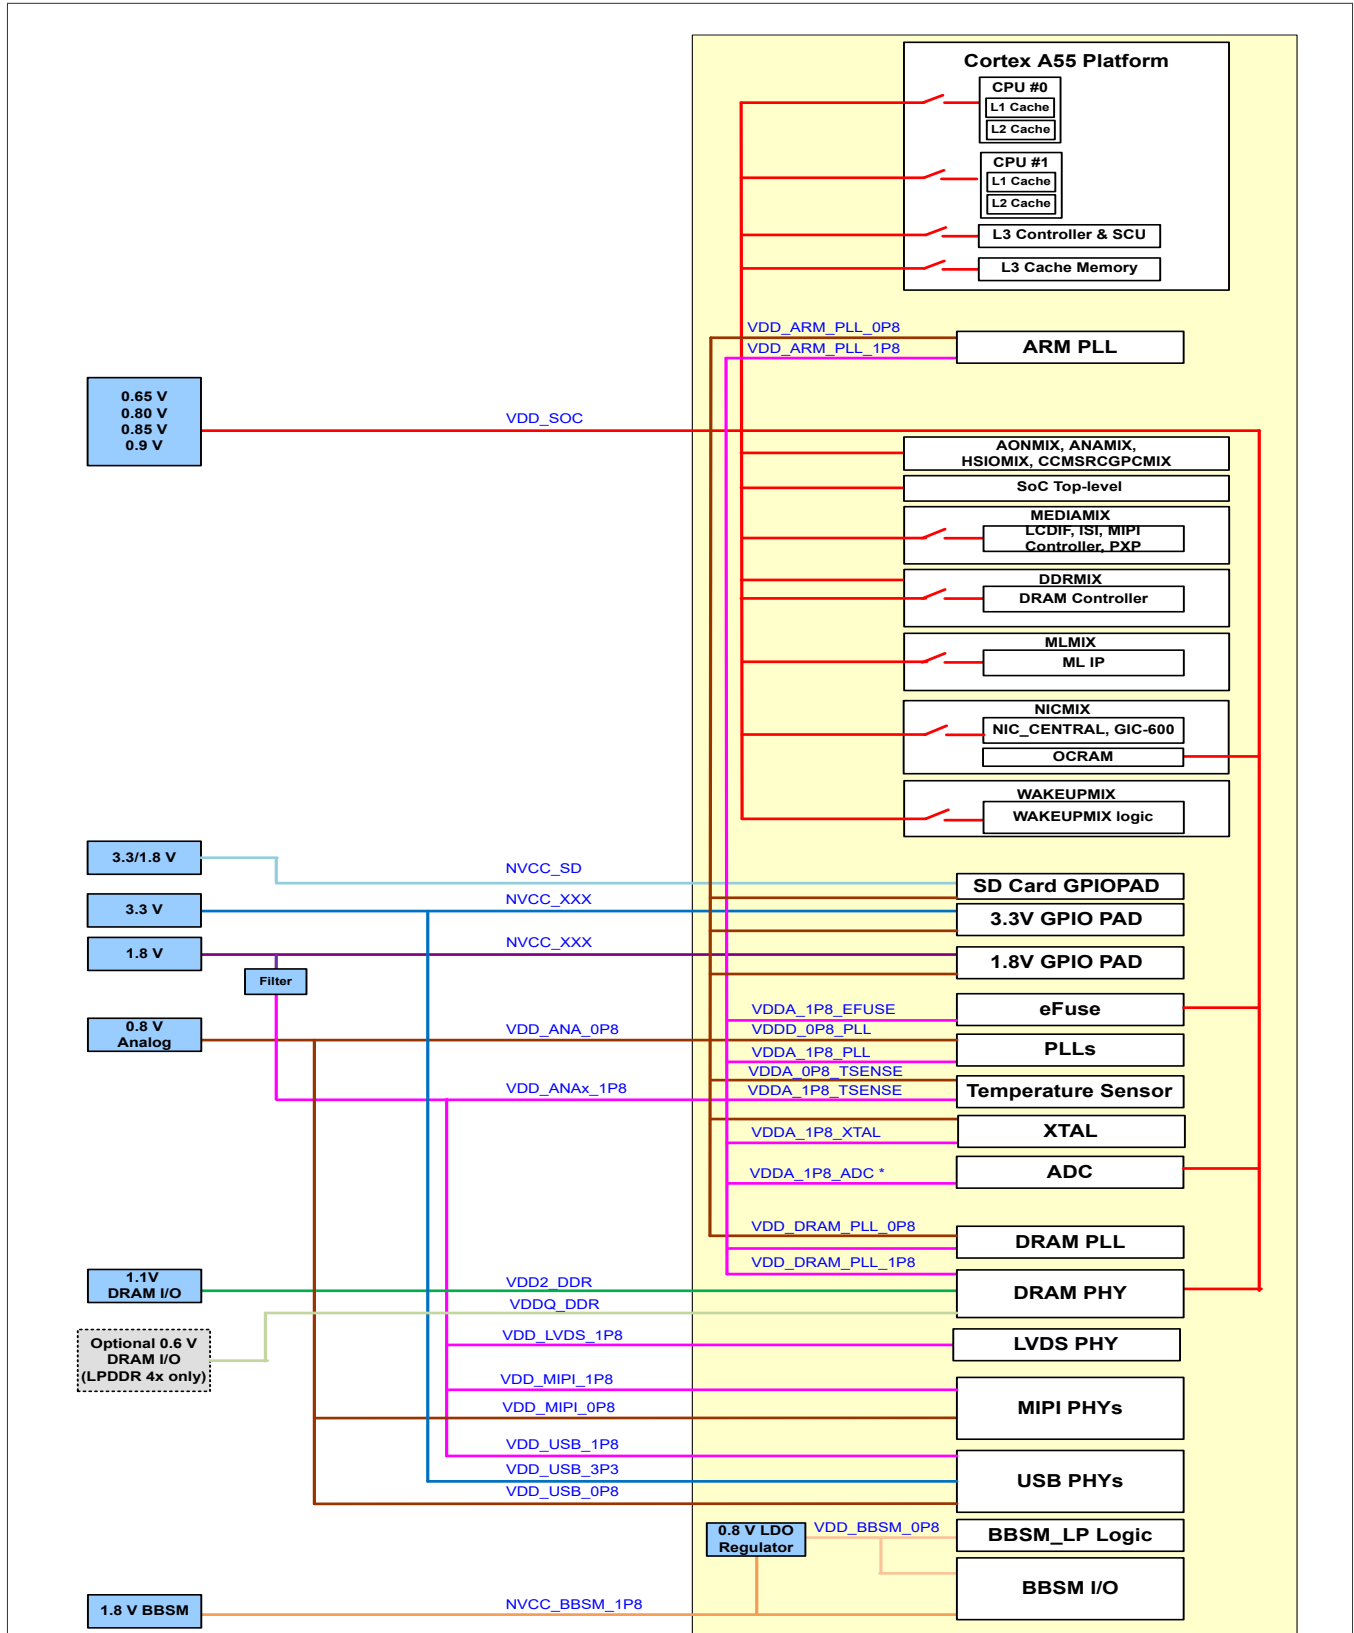

Figure 3. Power architecture of i.MX 93 family of processors

Note: If ADC is used, external voltage reference is recommended for VDD_ANAx_1P8 to improve the ADC ENOB.

4.1.4 Operating ranges

Table 14 provides the operating ranges of the i.MX 93 processors. For details on the chip's power structure, see the "Clock and Power Overview" chapter of the *i.MX 93 Reference Manual* (IMX93RM).

Table 14. Operating ranges

| Parameter Description | Symbol | Min | Typ | Max ^[1] | Unit | Comment |
|---|---------------|-------|------|--------------------|------|--------------------------------------|
| Power supply for SoC logic and Arm core | VDD_SOC | 0.85 | 0.90 | 0.95 | V | Power supply for SoC, overdrive mode |
| | | 0.80 | 0.85 | 0.90 | V | Power supply for SoC, nominal mode |
| | | 0.76 | 0.80 | 0.84 | V | Power supply for SoC, low drive mode |
| | | 0.61 | 0.65 | 0.70 | V | Power supply for SoC, suspend mode |
| Digital supply for PLLs, temperature sensor, LVCMOS I/O, MIPI, and USB PHYs | VDD_ANA_0P8 | 0.76 | 0.80 | 0.84 | V | — |
| | VDD_MIPI_0P8 | | | | | |
| | VDD_USB_0P8 | | | | | |
| 1.8 V supply for PLLs, eFuse, Temperature sensor, LVCMOS voltage detect reference, ADC, 24 MHz XTAL, LVDS, MIPI, and USB PHYs | VDD_ANAx_1P8 | 1.71 | 1.80 | 1.89 | V | [2] |
| | VDD_LVDS_1P8 | | | | | |
| | VDD_MIPI_1P8 | | | | | |
| | VDD_USB_1P8 | | | | | |
| 3.3 V supply for USB PHY | VDD_USB_3P3 | 3.069 | 3.30 | 3.45 | V | — |
| Voltage supply for DRAM PHY | VDD2_DDR | 1.06 | 1.10 | 1.14 | V | — |
| Voltage supply for DRAM PHY I/O | VDDQ_DDR | 1.06 | 1.10 | 1.14 | V | LPDDR4 |
| | | 0.57 | 0.60 | 0.67 | V | LPDDR4X |
| I/O supply and I/O pre-driver supply for GPIO in BBSM bank | NVCC_BBSM_1P8 | 1.62 | 1.80 | 1.98 | V | — |
| Power supply for GPIO when it is in 1.8 V mode | NVCC_AON | 1.62 | 1.80 | 1.98 | V | — |
| | NVCC_SD2 | | | | | |
| Power supply for GPIO when it is in 3.3 V mode | NVCC_GPIO | 3.00 | 3.30 | 3.465 | V | — |
| | NVCC_WAKEUP | | | | | |

Table continues on the next page...

Table 14. Operating ranges ...continued

| Parameter Description | Symbol | Min | Typ | Max ^[1] | Unit | Comment |
|-------------------------------------|-------------------------------|-----|-----|--------------------|------|---|
| Temperature Ranges | | | | | | |
| Junction temperature —Industrial | T _j ^[3] | -40 | — | +105 | °C | See the application note, i.MX 93 Product Lifetime Usage Estimates for information on product lifetime (power-on hours) for this processor. |
| Ambient temperature —Industrial | T _a | -40 | — | — | | |

[1] Applying the maximum voltage results in maximum power consumption and heat generation. NXP recommends a voltage set point = (V_{min} + the supply tolerance). This result in an optimized power/speed ratio.
 [2] VDD_ANAx_1P8 refers to VDD_ANA0_1P8, VDD_ANA1_1P8, and VDD_ANAVDET_1P8.
 [3] T_j minimum temperature supported at startup where T_j = T_a.

4.1.5 Maximum frequency of main modules

Table 15 provides the maximum frequency of main modules in the i.MX 93 of processors.

Table 15. Maximum frequency of main modules^[1]

| Main modules | Frequency (Low Drive mode) | Frequency (Nominal mode) | Frequency (Overdrive mode) |
|--------------------------------------|-------------------------------|-----------------------------|-------------------------------|
| EdgeLock [®] Secure Enclave | 133 MHz | 200 MHz | 250 MHz |
| Cortex [®] -M33 core | 133 MHz | 200 MHz | 250 MHz |
| Cortex [®] -A55 cores | 0.9 GHz | 1.4 GHz | 1.7 GHz |
| DRAM | 933 MHz | 1400 MHz | 1866 MHz |
| NPU | 500 MHz | 800 MHz | 1000 MHz |

[1] For more detailed information about clock, see Chapter Clock Controller Module (CCM) of *i.MX 93 Application Processor Estimated Power-on Hours*.

4.1.6 Clock sources

4.1.6.1 External clock sources

The i.MX 93 processor is designed to function with quartz crystals to generate the frequencies necessary for operation. 24 MHz for the main clock source and 32.768 kHz for the real time clock. External clock can be injected into RTC_XTALI if the frequency precision and jitter precision are sufficient.

The XTAL input is used to synthesize all of the clocks in the system with the RTC_XTAL input contribution to time keeping and low frequency operations.

Table 16 shows the interface frequency requirements.

Table 16. External input clock frequency

| Parameter Description | Symbol | Min | Typ | Max | Unit |
|-------------------------------------|-------------------|-----|-----------------------|-----|------|
| RTC_XTALI Oscillator ^[1] | f _{ckil} | — | 32.768 ^[2] | — | kHz |

[1] External oscillator or a crystal with internal oscillator amplifier.
 [2] Recommended nominal frequency is 32.768 kHz.

Table 17 shows the maximum frequency of external clock.

Table 17. Audio external clock frequency

| Parameter Description | Symbol | Low drive mode | Nominal mode | Overdrive mode | Unit |
|---------------------------|--------------------------------------|----------------|--------------|----------------|------|
| EXT_CLK maximum frequency | $f_{\text{ext_clk}}$ ^[1] | 133 | 200 | 200 | MHz |

[1] Audio EXT_CLK signal muxed on either pin SD2_VSELECT or PDM_BIT_STREAM1.

Table 18 shows the external input clock for OSC32K.

Table 18. RTC_OSC

| | Symbol | Min | Typ | Max | Unit |
|-----------|------------|---------------------|--------|---------------------|------|
| Frequency | f | — | 32.768 | — | kHz |
| RTC_XTALI | V_{IH} | 0.9 x NVCC_BBSM_1P8 | — | NVCC_BBSIM_1P8 | V |
| | V_{IL} | 0 | — | 0.1 x NVCC_BBSM_1P8 | V |
| | Duty cycle | 45 | — | 55 | % |

For the case where an external clock is desired to be the source of the 32.768 kHz clock, the RTC_XTALI pin may be driven with the RTC_XTALO pin disconnected.

4.1.6.2 On-chip oscillators

An external 24 MHz crystal is used in conjunction with the integrated amplifier to form a crystal oscillator that is used as the reference clock for all frequency synthesis on the processor.

Table 19. 24M quartz specifications^[1]

| Symbol | Parameter Description | Min | Typ | Max | Unit |
|--------|-----------------------|-----|-----|-----|------|
| fXTAL | Frequency | â€” | 24 | â€” | MHz |
| CLOAD | Cload | â€” | 12 | â€” | pF |
| DL | Drive level | â€” | â€” | 100 | ÂµW |
| ESR | ESR | â€” | â€” | 120 | â„¦ |

[1] An external 24 MHz crystal is used in conjunction with the integrated amplifier to form a crystal oscillator that is used as the reference clock for all frequency synthesis on the processor.

Table 20 shows 32K oscillator specifications.

Table 20. 32.768 kHz quartz specifications

| Symbol | Parameter Description | Min | Typ | Max | Unit |
|--------|---|-----|--------|-----|------|
| fXTAL | Frequency (crystal mode) ^[1] | â€” | 32.768 | â€” | kHz |
| CLOAD | Cload | â€” | 12.5 | â€” | pF |
| ESR | ESR | â€” | â€” | 90 | Kâ„¦ |

[1] Actual working drive level is dependent on real design. Please contact crystal vendor for selecting drive level of crystal.

4.1.7 Maximum supply currents

Power consumption is highly dependent on the application. Estimating the maximum supply currents required for power supply design is difficult because the use cases that requires maximum supply current is not a realistic use cases.

To help illustrate the effect of the application on power consumption, data was collected while running commercial standard benchmarks that are designed to be compute and graphic intensive. The results provided are intended to be used as guidelines for power supply design.

Table 21. Maximum supply currents

| Power rail | Max current | Unit |
|---|--|------|
| VDD_SOC | 2700 | mA |
| VDD_ANA_0P8 | 50 | mA |
| VDD_ANAx_1P8 [1] | 250 | mA |
| NVCC_BBSM_1P8 | 2 | mA |
| NVCC_GPIO, NVCC_WAKEUP, NVCC_AON | $I_{max} = N \times C \times V \times (0.5 \times F)$ Where: N—Number of IO pins supplied by the power line C—Equivalent external capacitive load V—IO voltage (0.5 x F)—Data change rate. Up to 0.5 of the clock rate (F). In this equation, I_{max} is in Amps, C in Farads, V in Volts, and F in Hertz. | |
| VDDQ_DDR | 160 | mA |
| VDD2_DDR | 525 | mA |
| VDD_MIPI_0P8 (for MIPI CSI-2 2-lane Rx PHY) | 18 | mA |
| VDD_MIPI_0P8 (for MIPI-DSI 4-lane Tx PHY) | 33 | mA |
| VDD_MIPI_1P8 (for MIPI CSI-2 2-lane Rx PHY) | 2.5 | mA |
| VDD_MIPI_1P8 (for MIPI-DSI 4-lane Tx PHY) | 9.5 | mA |
| VDD_USB_3P3 (for USB PHY) | 25.2 | mA |
| VDD_USB_1P8 (for USB PHY) | 36.2 | mA |
| VDD_USB_0P8 (for USB PHY) | 22.2 | mA |
| VDD_LVDS_1P8 | Max dynamic current 45 | mA |

[1] VDD_ANAx_1P8 refers to VDD_ANA0_1P8, VDD_ANA1_1P8, and VDD_ANAVDET_1P8.

4.2 Power modes

This section introduces the power modes used in the i.MX 93.

4.2.1 Power mode definition

The i.MX 93 supports the following power modes:

- **RUN Mode:** All external power rails are on, the Cortex-A55 is active and running; other internal modules can be on/off based on application.
- **Low Power RUN Mode:** This mode is defined as a very low power run mode with all external power rails are on. In this mode, all the unnecessary power domain (MIX) can be off, except AONMIX and the internal modules required, such as OSC24M/PLL. Cortex-M33 CPU in AONMIX handles all the computing and data processing. Cortex-A55 is power down and DRAM can be in self-refresh/retention mode. All the modules in the AONMIX, such as SAI/CAN/LPUART, can be used directly. To use modules in other power domain, such as WAKEUPMIX, the user can turn on additional peripherals and related power by Cortex-M33 as needed. Additional low power modes are also supported, but do not have power characterized in the Data Sheet. See the Reference Manual for a full set of power management capabilities.
- **IDLE Mode:** This mode is defined as a mode, which the Cortex-A55 can automatically enter when there is no thread running and all high-speed devices are not active. The Cortex-A55 can be put into power gated state but with L3 data retained, DRAM and the bus clock are reduced. Most of the internal logic is clock gated, but still remains powered. Compared with RUN mode, all the external power rails from the PMIC remain the same and most of the modules still remain in their state, so the interrupt response in this mode is very small.
- **SUSPEND Mode:** This mode is defined as the most power saving mode where all the clocks are off (including the Cortex-M33 CPU), all the unnecessary power supplies are off and all power gateable portions of the SoC are power gated. The Cortex-A55 CPU are fully power gated, all internal digital logic and analog circuit that can be powered down will be off, and all PHYs are power gated. DRAM is set at self-refresh/retention mode. VDD_SOC (and related digital supply) voltage is reduced to the "Suspend mode" voltage. The exit time from this mode will be much longer than IDLE, but the power consumption will also be much lower.
- **BBSM Mode:** This mode is also called RTC mode. Only the power for the BBSM domain remains on to keep RTC and BBSM logic alive.
- **OFF Mode:** All power rails are off.

Note:

Beyond the modes defined here, additional options can be configured in software, such as to adjust clock frequencies or gate clocks through the CCM programming model, or to adjust on-die power-gating through the SRC or GPC programming model, or to adjust the voltage supplied to the VDD_SOC supply as per [Operating ranges](#) in the Data Sheet.

[Table 22](#) summarizes the external power supply states in all the power modes.

Table 22. The power supply states

| Power rail | OFF | BBSM | SUSPEND (Analog on) | IDLE | RUN/LP RUN |
|----------------------|-----|------|---------------------|------|------------|
| NVCC_BBSM_1P8 | OFF | ON | ON | ON | ON |
| VDD_SOC | OFF | OFF | ON | ON | ON |
| VDD2_DDR VDDQ_DDR | OFF | OFF | ON | ON | ON |
| NVCC_<XXX> | OFF | OFF | ON | ON | ON |

Table continues on the next page...

Table 22. The power supply states ...continued

| Power rail | OFF | BBSM | SUSPEND (Analog on) | IDLE | RUN/LP RUN |
|--|-----|------|------------------------|------|------------|
| VDD_ANA_0P8 VDD_MIPI_0P8 VDD_USB_0P8 | OFF | OFF | ON | ON | ON |
| VDD_ANAx_1P8 VDD_LVDS_1P8 VDD_MIPI_1P8 VDD_USB_1P8 VDD_USB_3P3 | OFF | OFF | ON | ON | ON |

4.2.2 Low power modes

The state of each module in the IDLE, SUSPEND, and BBSM mode are defined in the [Table 23](#).

Table 23. Low power mode definition

| | IDLE | SUSPEND | BBSM |
|-------------------------|--------------------|--------------|------|
| CCM LPM mode | WAIT | STOP | N/A |
| Arm Cortex®-A55 CPU0 | OFF | OFF | OFF |
| Arm Cortex®-A55 CPU1 | OFF | OFF | OFF |
| Shared L3 cache | ON | OFF | OFF |
| Display | OFF | OFF | OFF |
| DRAM controller and PHY | ON | OFF | OFF |
| ARM_PLL | OFF | OFF | OFF |
| DRAM_PLL | OFF | OFF | OFF |
| SYSTEM_PLL 1/2/3 | ON | OFF | OFF |
| XTAL | ON | OFF | OFF |
| RTC | ON | ON | ON |
| External DRAM device | Self-Refresh | Self-Refresh | OFF |
| USB PHY | In Low Power State | OFF | OFF |
| DRAM clock | 266 MHz | OFF | OFF |

Table continues on the next page...

Table 23. Low power mode definition ...continued

| | IDLE | SUSPEND | BBSM |
|--------------------------|--------------|--------------------|------|
| NOC clock | 133 MHz | OFF | OFF |
| AXI clock | 133 MHz | OFF | OFF |
| Module clocks | ON as needed | OFF | OFF |
| EdgeLock® Secure Enclave | ON | ON | ON |
| GPIO Wakeup | Yes | Yes | OFF |
| RTC Wakeup | Yes | Yes | Yes |
| USB remote wakeup | Yes | No ^[1] | No |
| Other wakeup source | Yes | No ^[2] | No |
| WAKEUPMIX | ON | OFF ^[3] | OFF |
| MLMIX | ON | OFF | OFF |
| NICMIX | ON as needed | OFF | OFF |

[1] USB remote wakeup can be "Yes" if required.
 [2] Other wakeup source can be "Yes" if required.
 [3] WAKEUPMIX can be "ON" if required.

Note:

- Automatic enter self-refresh when there is no DRAM access.
- Put into self-refresh mode by software before entering low power mode.
- Turn off externally by PMIC when PMIC_STBY_REQ signal is asserted.
- Remote wakeup can be supported if the USB PHY power is on in this mode.

4.2.3 Chip power in different Low Power modes

Table 24 shows power consumption in different LP modes.

Table 24. Chip power in different LP modes

| Mode | Supply | Voltage (V) | Power (mW) ^[1] |
|---------|----------------------------|-------------|---------------------------|
| BBSM | NVCC_BBSM_1P8 | 1.8 | 0.14 |
| SUSPEND | NVCC_GPIO, NVCC_SD2 | 3.3 | 2.65 |
| | NVCC_WAKEUP ^[2] | 1.8 | 1.20 |
| | VDDQ_DDR | 0.6 | < 0.01 |
| | VDD2_DDR | 1.1 | 0.25 |

Table continues on the next page...

Table 24. Chip power in different LP modes ...continued

| Mode | Supply | Voltage (V) | Power (mW) ^[1] |
|------|----------------------|-------------|---------------------------|
| | VDD_ANA*_1P8 | 1.8 | 1.85 |
| | VDD_ANA_0P8 | 0.8 | 0.40 |
| | VDD_MIPI_0P8 | 0.8 | 0.65 |
| | VDD_USB_0P8 | 0.8 | 0.45 |
| | VDD_USB_3P3 | 3.3 | 0.25 |
| | VDD_SOC | 0.65 | 7.40 |
| | Total ^[3] | — | 15.1 |

[1] All the power numbers defined in the table are at 25°C. Use case dependent.

[2] To achieve this low power consumption values for I/O power rails in SUSPEND mode, it is recommended to configure the IOMUX of those pins to GPIO input and change the PAD control settings to pull-up or pull-down depends on the board design before entering SUSPEND mode.

[3] Sum of the listed supply rails.

4.3 Power supplies requirements and restrictions

The system design must comply with power-up sequence, power-down sequence, and steady state guidelines as described in this section to guarantee the reliable operation of the device. Any deviation from these sequences may result in the following situations:

- Excessive current during power-up phase
- Prevention of the device from booting
- Irreversible damage to the processor (worst-case scenario)

Figure 4 illustrates an example about power sequence of i.MX 93 processors.

Figure 4. The power sequence of i.MX 93 processors

Note: POR_B must be asserted whenever VDD_SOC is powered down, but NVCC_BBSM_1P8 is powered up (when the processor is in BBSM mode).

4.3.1 Power-up sequence

The power-up sequence of i.MX 93 is defined as follows:

1. Turn on NVCC_BBSM_1P8
2. [The SoC will assert PMIC_ON_REQ at this point in time.]
3. Turn on VDD_SOC digital voltage supplies.
4. Turn on all VDD*_0P8 analog, PHY, and PLL supplies.
5. Turn on all remaining 1.8 V supplies. This includes VDD*_1P8 analog, PHY, PLL supplies, and any 1.8 V NVCC_XXX I/O supplies.
6. Turn on DDR I/O supplies.
7. Turn on 3.3 V supplies. This includes all 3.3 V NVCC_XXX I/O supplies and VDD_USB_3P3. [This 3.3 V supply step may be simultaneous with either the 1.8 V or the DDR supplies if desired.]
8. POR_B release (it should be asserted during the entire power-up sequence.)

4.3.2 Power-down sequence

The power-down sequence of i.MX 93 is defined as follows:

- Turn off NVCC_BBSM_1P8 last
- Turn off VDD_SOC after the other (non-BBSM) power rails or at the same time as other (non-BBSM) rails.
- No sequence for other power rails during power down.

4.4 PLL electrical characteristics

Table 25 shows the PLL electrical parameters.

Table 25. PLL electrical parameters

| PLL type | Parameter | Value |
|------------|--------------------|--|
| AUDIO_PLL1 | Clock output range | Up to 650 MHz |
| | Reference clock | 24 MHz |
| | Lock time | 50 μ s |
| | Jitter | $\pm 1\%$ of output period, ≥ 50 ps |
| VIDEO_PLL1 | Clock output range | Up to 594 MHz |
| | Reference clock | 24 MHz |
| | Lock time | 50 μ s |
| SYS_PLL1 | Clock output range | 312.5 MHz — 1 GHz |
| | Reference clock | 24 MHz |
| | Lock time | 70 μ s |
| ARM_PLL | Clock output range | 800 MHz — 1700 MHz |
| | Reference clock | 24 MHz |
| | Lock time | 70 μ s |
| DRAM_PLL1 | Clock output range | 400 MHz — 1000 MHz |
| | Reference clock | 24 MHz |
| | Lock time | 50 μ s |

4.5 I/O DC parameters

This section includes the DC parameters of the following I/O types:

- General Purpose I/O (GPIO)
- Double Data Rate I/O (DDR) for LPDDR4 and LPDDR4X modes
- LVDS I/O

4.5.1 General purpose I/O (GPIO) DC parameters

Table 26 shows DC parameters for GPIO pads. The parameters Table 26 are guaranteed per the operating ranges in Table 14, unless otherwise noted.

Table 26. GPIO DC parameters

| Parameter | Symbol | Test Conditions | Min | Typ | Max | Unit |
|---------------------------|----------------|--|----------------|-----|----------------|------|
| High-level output voltage | $V_{OH(1.8V)}$ | DSE = X1, IOH = 1.1 mA DSE = X6, IOH = 6.6 mA | 0.8 x NVCC_xxx | — | NVCC_xxx | V |
| | $V_{OH(3.3V)}$ | DSE = X1, IOH = 2 mA DSE = X4, IOH = 8 mA | 0.8 x NVCC_xxx | — | NVCC_xxx | V |
| Low-level output voltage | $V_{OL(1.8V)}$ | DSE = X1, IOL = 1.1 mA DSE = X6, IOL = 6.6 mA | 0 | — | 0.2 x NVCC_xxx | V |
| | $V_{OL(3.3V)}$ | DSE = X1, IOL = 2 mA DSE = X4, IOL = 8 mA | 0 | — | 0.2 x NVCC_xxx | V |
| Low-level input voltage | V_{IL} | NVCC_xxx = 1.65 - 3.465 V; Temp = -40 to 125°C | 0 | — | 0.3 x NVCC_xxx | V |
| High-level input voltage | V_{IH} | NVCC_xxx = 1.65 - 3.465 V; Temp = -40 to 125°C | 0.7 x NVCC_xxx | — | NVCC_xxx | V |
| Pull-down resistor | Rpd3.3v | NVCC_xxx = 3.0 - 3.465 V; Temp = -40 to 125°C | 24 | 43 | 87 | KΩ |
| Pull-up resistor | Rpu3.3v | | 18 | 37 | 72 | KΩ |
| Pull-down resistor | Rpd1.8v | NVCC_xxx = 1.65 - 1.95 V; Temp = -40 to 125°C | 13 | 23 | 48 | KΩ |
| Pull-up resistor | Rpu1.8v | | 12 | 22 | 49 | KΩ |

Note: For GPIO pads, when the supplies are ramp-up or/and below operating level, the pad state values are undefined.

Note: For PHY pads, the PAD state values are undefined before POR_B is asserted.

Table 27. Additional leakage parameters

| Parameter | Symbol | Condition | Min | Max | Unit |
|--------------|-----------------|---|-----|-----|------|
| Leakage high | I _{IH} | Non-PHY I/O, 1.65 V - 3.465 V, Temp = -40°C to 125°C pad = VDDIO ^[1] | -5 | 5 | μA |
| Leakage low | I _{IL} | Non-PHY I/O, 1.65 V - 3.465 V, Temp = -40°C to 125°C pad = VSS ^[1] | -5 | 5 | |

[1] This specification does not apply to PHY, ANALOG, TAMPER0, TAMPER1 I/Os, PMIC_ON_REQ, and PMIC_STBY_REQ.

4.5.2 DDR I/O DC electrical characteristics

The DDR I/O pads support LPDDR4/LPDDR4X operational modes. The Double Data Rate Controller (DDRC) is compliant with JEDEC-compliant SDRAMs.

DDRC operation is contingent upon the board's DDR design adherence to the DDR design and layout requirements stated in the hardware development guide for the i.MX 93 application processors.

4.5.3 LVDS DC parameters

The LVDS interface complies with TIA/EIA 644-A standard. See TIA/EIA STANDARD 644-A, "Electrical Characteristics of Low Voltage Differential Signaling (LVDS) Interface Circuits" for details.

Table 28 shows the Low Voltage Differential Signaling (LVDS) DC parameters.

Table 28. LVDS DC Characteristics

| Parameter | Symbol | Test Conditions | Min | Typ | Max | Unit |
|-------------------------------|---------------|---|-------|-----|-------|------|
| Output Differential Voltage | V_{OD} | $R_{load} = 100 \Omega$ between Pad P and Pad N | 250 | 350 | 450 | mV |
| Output High Voltage | V_{OH} | $R_{load} = 100 \Omega$ between Pad P and Pad N | 1.25 | — | 1.6 | V |
| Output Low Voltage | V_{OL} | $R_{load} = 100 \Omega$ between Pad P and Pad N | 0.9 | — | 1.25 | V |
| Offset common mode Voltage | V_{CM} | — | 1.125 | 1.2 | 1.375 | V |
| Tri-state I/O supply current | $I_{cc-ovdd}$ | $V_{IN} = OVDD^{[1]}$ or 0 | 0.016 | — | 1700 | nA |
| Tri-state core supply current | $I_{cc-vddi}$ | $V_{IN} = VDDI$ or 0 | — | — | 1500 | |
| Power Supply current | I_{cc} | $V_{IN} = OVDD$ or 0 $R_{load} = 100 \Omega$ | — | — | 5 | mA |

[1] OVDD is the I/O supply voltage.

4.6 I/O AC parameters

This section includes the AC parameters of the following I/O types:

- General Purpose I/O (GPIO)
- LVDS I/O

The GPIO load circuit and output transition time waveforms are shown in Figure 5 and Figure 6.

Figure 5. Load circuit for output

Figure 6. Output transition time waveform

4.6.1 General purpose I/O (GPIO) AC parameters

Table 29. General purpose I/O (GPIO) AC parameters

| Symbol | Description | Min | Typ | Max | Unit | Condition |
|--------|--------------|------|-----|------|------|--|
| tR | TX rise time | 3950 | — | 5950 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X1 |
| tF | TX fall time | 4140 | — | 5600 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X1 |
| tR | TX rise time | 1890 | — | 2820 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X2 |
| tF | TX fall time | 1790 | — | 2560 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X2 |
| tR | TX rise time | 675 | — | 1950 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X3 |
| tF | TX fall time | 584 | — | 1730 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X3 |
| tR | TX rise time | 521 | — | 1320 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X4 |
| tF | TX fall time | 442 | — | 748 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X4 |
| tR | TX rise time | 454 | — | 742 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X5 |
| tF | TX fall time | 380 | — | 554 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X5 |
| tR | TX rise time | 419 | — | 639 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate |

Table continues on the next page...

Table 29. General purpose I/O (GPIO) AC parameters...continued

| Symbol | Description | Min | Typ | Max | Unit | Condition |
|--------|--------------|------|-----|------|------|--|
| | | | | | | (1.62 V, 1.8 V, 1.98 V), Drive strength X6 |
| tF | TX fall time | 349 | — | 506 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X6 |
| tR | TX rise time | 4030 | — | 5790 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (3 V, 3.3 V, 3.465 V), Drive strength X1 |
| tF | TX fall time | 4410 | — | 6290 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (3 V, 3.3 V, 3.465 V), Drive strength X1 |
| tR | TX rise time | 1870 | — | 2950 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (1.62 V, 1.8 V, 1.98 V), Drive strength X2 |
| tF | TX fall time | 1900 | — | 3310 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (3 V, 3.3 V, 3.465 V), Drive strength X2 |
| tR | TX rise time | 774 | — | 1930 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (3 V, 3.3 V, 3.465 V), Drive strength X3 |
| tF | TX fall time | 719 | — | 2070 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (3 V, 3.3 V, 3.465 V), Drive strength X3 |
| tR | TX rise time | 598 | — | 1360 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (3 V, 3.3 V, 3.465 V), Drive strength X4 |
| tF | TX fall time | 490 | — | 1590 | ps | Slew rate FSEL1 = 11b, Fast Slew Rate (3 V, 3.3 V, 3.465 V), Drive strength X4 |

4.6.2 DDR I/O AC electrical characteristics

The DDR I/O pads support LPDDR4/LPDDR4X operational modes. The DDRC is compliant with JEDEC-compliant SDRAMs. DDRC operation is contingent upon the board's DDR design adherence to the DDR design and layout requirements stated in the hardware development guide for the i.MX 93 application processor.

4.6.3 LVDS AC Parameters

The differential output transition time waveform is shown in [Figure 7](#).

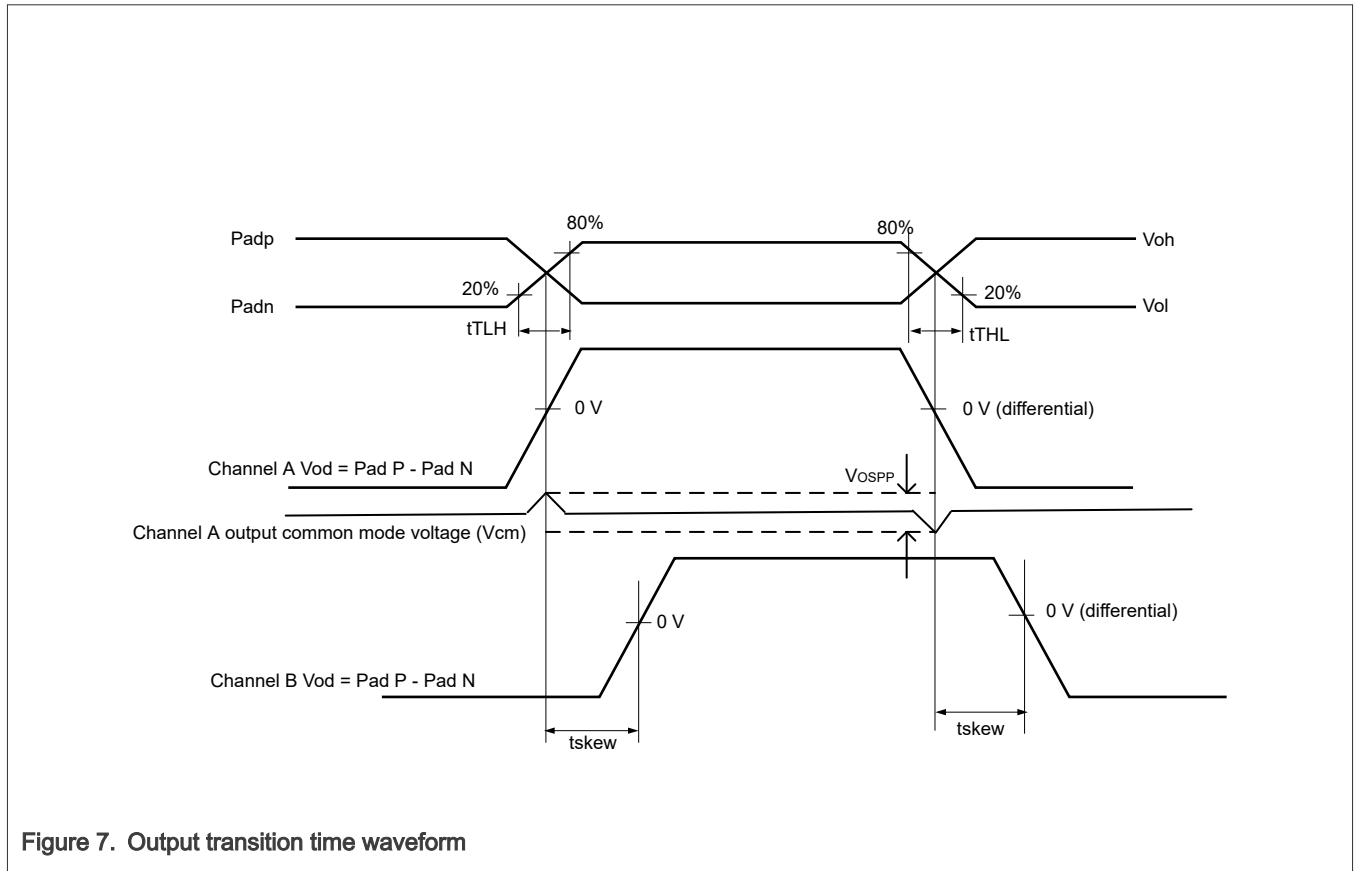

Figure 7. Output transition time waveform

[Table 30](#) shows the AC parameters of LVDS.

Table 30. LVDS AC parameters

| Parameter | Symbol | Test Conditions | Min | Typ | Max | Unit |
|--|---------------|--|-------|---------------------|------|-----------------------------------|
| Lane skew ^[1] | t_{Skew} | $R_{load} = 100 \Omega$ $C_{load} = 2 \text{ pF}$ | — | 0.25 ^[2] | — | ns |
| Transition Low to High time ^[3] | t_{TLH} | | — | — | 0.3 | Unit Interval (UI) ^[4] |
| Transition High to Low time | t_{THL} | | — | — | 0.3 | |
| Operating data rate ^[5] | f | — | — | — | 560 | Mbps |
| Offset peak to peak voltage imbalance | V_{ospp} | — | — | — | 150 | mV |
| Tri-state I/O supply current | $I_{cc-ovdd}$ | $V_{IN} = OVDD$ or 0 | 0.016 | — | 1700 | nA |
| Tri-state core supply current | $I_{cc-vddi}$ | $V_{IN} = VDDI$ or 0 | — | — | 1500 | |
| Power Supply current | I_{cc} | $V_{IN} = OVDD$ or 0 $R_{load} = 100 \Omega$ | — | — | 5 | mA |

[1] t_{Skew} is the differential time at $V_{od} = 0$ voltage between different channel.

[2] This is typical maximum absolute delay between any two channels.

[3] Measurement levels are 20–80% from output voltage.

- [4] This value is dependent on Operating data rate.
- [5] This is the maximum bit rate that defined by supported display types.

4.7 Differential I/O output buffer impedance

The Differential CCM interface is designed to be compatible with TIA/EIA 644-A standard. See, TIA/EIA STANDARD 644-A, *Electrical Characteristics of Low Voltage Differential Signaling (LVDS) Interface Circuits* (2001) for details.

4.7.1 DDR I/O output impedance

DDR output driver and ODT impedances are controlled across PVT using ZQ calibration procedure with a 120 ohm $\pm 1\%$ resistor to ground. Programmable drive strength and ODT impedance targets available in the NXP DDR tool are detailed in the device IBIS model. Impedance deviation (calibration accuracy) is $\pm 10\%$ (Maximum/Minimum impedance) across PVT.

4.8 System modules timing

This section contains the timing and electrical parameters for the modules in each i.MX 93 processor.

4.8.1 Reset timing parameters

Figure 8 shows the reset timing and Table 31 lists the timing parameters.

Figure 8. Reset timing diagram

Table 31. Reset timing parameters

| ID | Parameter | Min | Max | Unit |
|-----|---|-----|-----|-----------------|
| CC1 | Duration of POR_B to be qualified as valid. Note: POR_B rise/fall times must be 400 μ s or less. | 1 | — | RTC_XTALI cycle |

4.8.2 WDOG Reset timing parameters

Figure 9 shows the WDOG reset timing and Table 32 lists the timing parameters.

Figure 9. WDOGx_B timing diagram

Table 32. WDOGx_B timing parameters

| ID | Parameter | Min | Max | Unit |
|-----|-------------------------------|-----|-----|-----------------|
| CC3 | Duration of WDOG1_B Assertion | 1 | — | RTC_XTALI cycle |

Note: RTC_XTALI is approximately 32 kHz. RTC_XTALI cycle is one period or approximately 30 μ s.

Note: *WDOGx_B* output signals (for each one of the Watchdog modules) do not have dedicated pins, but are muxed out through the IOMUX. See the IOMUXC chapter of the i.MX 93 Applications Processor Reference Manual (IMX93RM) for detailed information.

4.8.3 JTAG timing parameters

Figure 10 depicts the JTAG test clock input timing. Figure 11 depicts the JTAG boundary scan timing. Figure 12 depicts the JTAG test access port. Signal parameters are listed in Table 33.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

Figure 10. Test Clock Input Timing Diagram

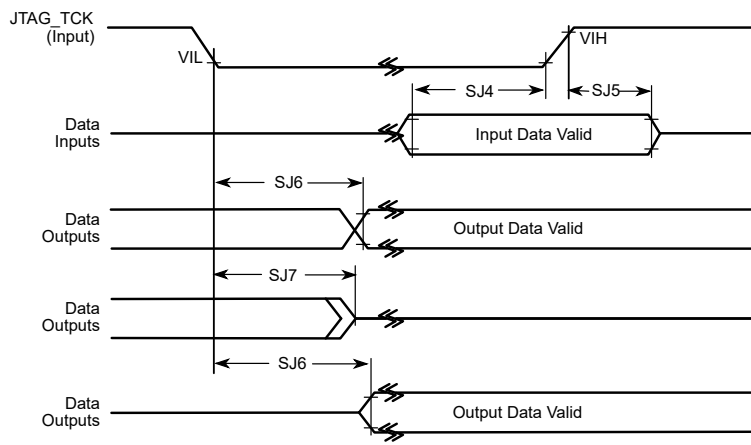

Figure 11. Boundary system (JTAG) timing diagram

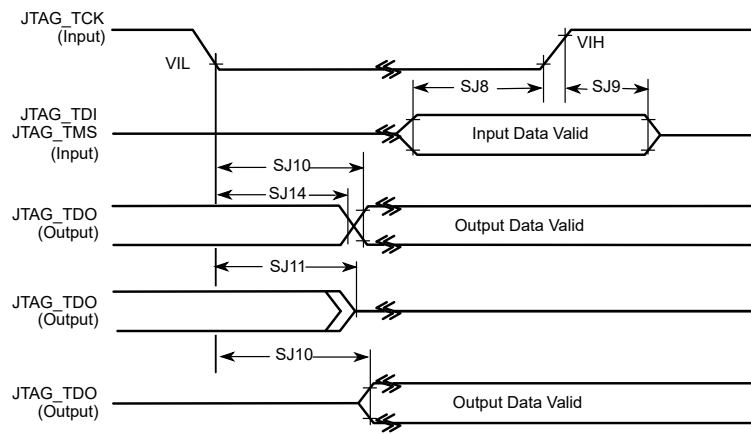

Figure 12. Test Access Port Timing Diagram

Table 33. JTAG Timing^{[1],[2]}

| ID | Parameter | All Frequencies | | Unit |
|------|---|-----------------|-----|------|
| | | Min | Max | |
| SJ0 | JTAG_TCK frequency of operation ^{[3],[4]} | — | 50 | MHz |
| SJ1 | JTAG_TCK cycle time in crystal mode | 20 | — | ns |
| SJ2 | JTAG_TCK clock pulse width measured at V_M ^[5] | 10 | — | ns |
| SJ3 | JTAG_TCK rise and fall times | — | 3 | ns |
| SJ4 | Boundary scan input data set-up time | 15 | — | ns |
| SJ5 | Boundary scan input data hold time | 15 | — | ns |
| SJ6 | JTAG_TCK low to output data valid | — | 600 | ns |
| SJ7 | JTAG_TCK low to output high impedance | — | 600 | ns |
| SJ8 | JTAG_TMS, JTAG_TDI data set-up time | 5 | — | ns |
| SJ9 | JTAG_TMS, JTAG_TDI data hold time | 5 | — | ns |
| SJ10 | JTAG_TCK low to JTAG_TDO data valid | — | 14 | ns |
| SJ11 | JTAG_TCK low to JTAG_TDO high impedance | — | 14 | ns |
| SJ14 | JTAG_TCK low to JTAG_TDO data invalid | 1 | — | ns |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [2] Output timing valid for maximum external load $CL = 25$ pF, which is assumed to be a 10 pF load at the end of a 50 Ω , unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance of the transmission line can be equal to the selected R_{DS(on)} of the I/O pad output driver.
 [3] T_{DC} = target frequency of JTAG
 [4] 50 MHz frequency is for the JTAG debug interface. For boundary scan, the maximum TCK frequency is 10 MHz.
 [5] V_M = mid-point voltage

4.8.4 SWD timing parameters

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

Figure 13 depicts the SWD timing.

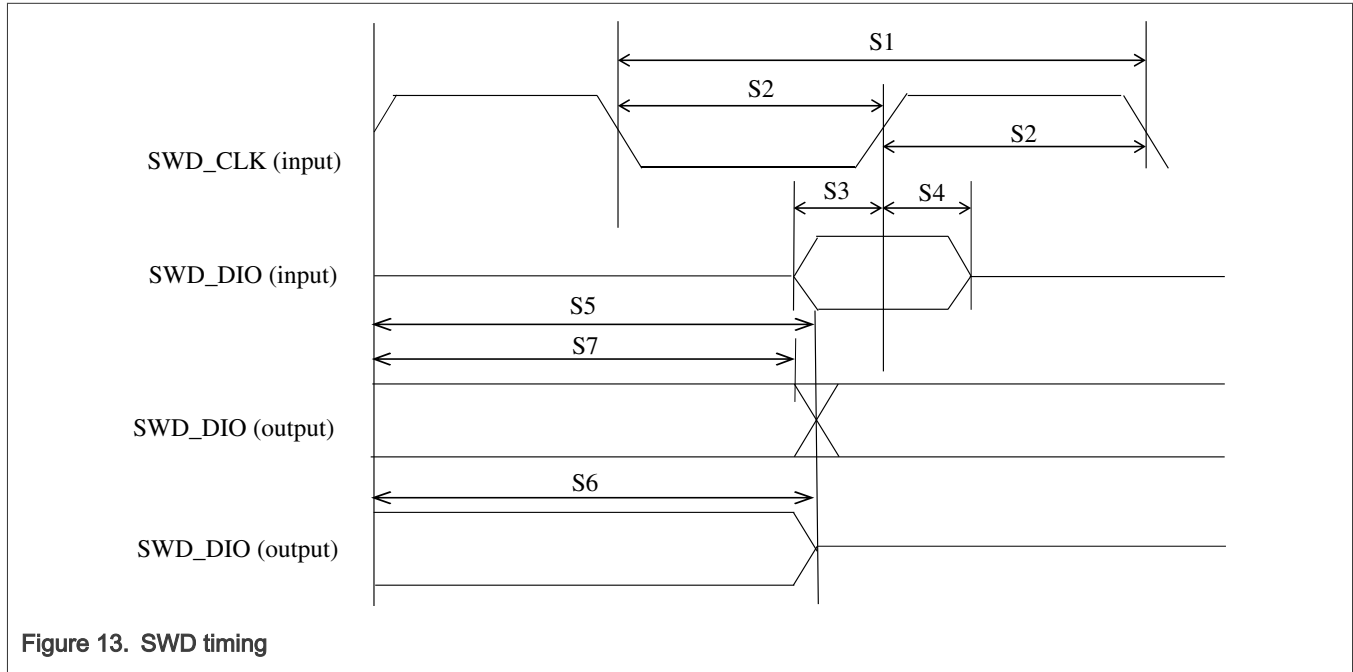

Figure 13. SWD timing

Table 34 lists SWD timing parameters.

Table 34. SWD timing parameters^{[1],[2]}

| Symbol | Description | Min | Max | Unit |
|--------|----------------------------|-----|-----|------|
| S0 | SWD_CLK frequency | — | 50 | MHz |
| S1 | SWD_CLK cycle time | 20 | — | ns |
| S2 | SWD_CLK pulse width | 10 | — | ns |
| S3 | Input data setup time | 5 | — | ns |
| S4 | Input data hold time | 5 | — | ns |
| S5 | Output data valid time | — | 14 | ns |
| S6 | Output high impedance time | — | 14 | ns |
| S7 | Output data invalid time | 0 | — | ns |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).

[2] Timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 Ω, unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line can be equal to the selected RDSO_N of the I/O pad output.

4.8.5 DDR SDRAM-specific parameters (LPDDR4/LPDDR4X)

The i.MX 93 Family of processors have been designed and tested to work with JEDEC JESD209—compliant LPDDR4/LPDDR4X memory.

- JEDEC LPDDR4 Specification JESD209-4B, February 2017
- JEDEC LPDDR4X Specification JESD209-4-1, January 2017

Timing diagrams and tolerances required to work with these memories are specified in the respective documents and are not reprinted here.

Meeting the necessary timing requirements for a DDR memory system is highly dependent on the components chosen and the design layout of the system as a whole. NXP cannot cover in this document all the requirements needed to achieve a design that meets full system performance over temperature, voltage, and part variation; PCB trace routing, PCB dielectric material, number of routing layers used, placement of bulk/decoupling capacitors on critical power rails, VIA placement, GND and Supply planes layout, and DDR controller/PHY register settings all are factors affecting the performance of the memory system. Consult the hardware user guide for this device and NXP validated design layouts for information on how to properly design a PCB for best DDR performance. NXP strongly recommends duplicating an NXP validated design as much as possible in the design of critical power rails, placement of bulk/decoupling capacitors and DDR trace routing between the processor and the selected DDR memory. All supporting material is readily available on the device web page on <https://www.nxp.com/products/processors-and-microcontrollers/arm-processors/i-mx-applications-processors/i-mx-9-processors:IMX9-PROCESSORS>.

Processors that demonstrate full DDR performance on NXP validated designs, but do not function on customer designs, are not considered marginal parts. A report detailing how the returned part behaved on an NXP validated system will be provided to the customer as closure to a customer’s reported DDR issue. Customers bear the responsibility of properly designing the Printed Circuit Board, correctly simulating and modeling the designed DDR system, and validating the system under all expected operating conditions (temperatures, voltages) prior to releasing their product to market.

Table 35. i.MX 93 DRAM controller supported SDRAM configurations

| Parameter | LPDDR4/LPDDR4X |
|-----------------------------|--------------------------|
| Number of Controllers | 1 |
| Number of Channels | 1 |
| Number of Chip Selects | 2 |
| Bus Width | 16-bit |
| Maximum supported data rate | |
| • Low drive mode | 1866 MT/s |
| • Nominal drive mode | 2880 MT/s |
| • Overdrive mode | 3733 MT/s ^[1] |

[1] For 9 x 9 mm package, the maximum data rate of LPDDR4x/LPDDR4 is 3200 MT/s.

4.8.5.1 Clock/data/command/address pin allocations

These processors uses generic names for clock, data, and command address bus; see [Table 111](#) for details about mapping of clock, data, and command address signals of LPDDR4/LPDDR4X modes.

4.9 Display and graphics

The following sections provide information on display and graphic interfaces.

4.9.1 MIPI D-PHY electrical characteristics

4.9.1.1 MIPI HS-TX specifications

Table 36. MIPI high-speed transmitter DC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|-----------------------------|---|-----|-----|------|----------|
| $V_{CMTX}^{[1]}$ | High Speed Transmit Static Common Mode Voltage | 150 | 200 | 250 | mV |
| $ \Delta V_{CMTX} _{(1,0)}$ | V_{CMTX} mismatch when Output is Differential-1 or Differential-0 | — | — | 5 | mV |
| $ V_{OD} ^1$ | High Speed Transmit Differential Voltage | 140 | 200 | 270 | mV |
| $ \Delta V_{OD} $ | V_{OD} mismatch when Output is Differential-1 or Differential-0 | — | — | 14 | mV |
| V_{OHHS}^1 | High Speed Output High Voltage | — | — | 360 | mV |
| Z_{OS} | Single Ended Output Impedance | 40 | 50 | 62.5 | Ω |
| ΔZ_{OS} | Single Ended Output Impedance Mismatch | — | — | 10 | % |

[1] Value when driving into load impedance anywhere in the Z_{ID} range.

Table 37. MIPI high-speed transmitter AC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|-----------------------|---|-----|-----|-----------|--------|
| $\Delta V_{CMTX(HF)}$ | Common-level variations above 450 MHz | — | — | 15 | mVRMS |
| $\Delta V_{CMTX(LF)}$ | Common-level variation between 50-450 MHz | — | — | 25 | mVPEAK |
| t_R and $t_F^{[1]}$ | Rise Time and Fall Time (20% to 80%) | 100 | — | 0.35 x UI | ps |

[1] UI is the long-term average unit interval.

4.9.1.2 MIPI HS-RX specifications

Table 38. MIPI high-speed receiver DC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|--------------|---|-----|-----|-----|----------|
| V_{IDTH} | Differential input high voltage threshold | — | — | 70 | mV |
| V_{IDTL} | Differential input low voltage threshold | -70 | — | — | mV |
| V_{IHHS} | Single ended input high voltage | — | — | 460 | mV |
| V_{ILHS} | Single ended input low voltage | -40 | — | — | mV |
| V_{CMRXDC} | Input common mode voltage | 70 | — | 330 | mV |
| Z_{ID} | Differential input impedance | 80 | 100 | 125 | Ω |

Table 39. MIPI high-speed receiver AC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|--------------------------------------|---|-----|-----|-----|------|
| $\Delta V_{CMRX(HF)}$ ^[1] | Common mode interference beyond 450 MHz | — | — | 50 | mV |
| $\Delta V_{CMRX(LF)}$ | Common mode interference between 50 and 450 MHz | -25 | — | 25 | mV |
| C_{CM} | Common mode termination | — | — | 60 | pF |

[1] $\Delta V_{CMRX(HF)}$ is the peak amplitude of a sine wave superimposed on the receiver inputs.

4.9.1.3 MIPI LP-TX specifications

Table 40. MIPI low-power transmitter DC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|--------------------------|---|-----|-----|-----|----------|
| V_{OH} ^[1] | Thevenin Output High Level | 1.1 | 1.2 | 1.3 | V |
| V_{OL} | Thevenin Output Low Level | -50 | — | 50 | mV |
| Z_{OLP} ^[2] | Output Impedance of Low Power Transmitter | 110 | — | — | Ω |

[1] This specification can only be met when limiting the core supply variation from 1.1 V till 1.3 V.

[2] Although there is no specified maximum for ZOLP, the LP transmitter output impedance ensures the TRLP/TFLP specification is met.

Table 41. MIPI low-power transmitter AC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|---|--|-----|-----|-----|-------|
| T_{RLP}/T_{FLP} ^[1] | 15% to 85% Rise Time and Fall Time | — | — | 25 | ns |
| T_{REOT} ^{1,[2],[3]} | 30% to 85% Rise Time and Fall Time | — | — | 35 | ns |
| $T_{LP-PULSE-TX}$ ^[4] | Pulse width of the LP exclusive-OR clock: First LP exclusive-OR clock pulse after Stop state or last pulse before Stop state | 40 | — | — | ns |
| | Pulse width of the LP exclusive-OR clock: All other pulses | 20 | — | — | ns |
| $T_{LP-PER-TX}$ | Period of the LP exclusive-OR clock | 90 | — | — | ns |
| $\delta V / \delta t_{SR}$ ^{1,[5],[6],[7]} | Slew Rate @ CLOAD= 0 pF | 25 | — | 500 | mV/ns |
| | Slew Rate @ CLOAD= 5 pF | 25 | — | 300 | mV/ns |
| | Slew Rate @ CLOAD= 20 pF | 25 | — | 250 | mV/ns |
| | Slew Rate @ CLOAD= 70 pF | 25 | — | 150 | mV/ns |
| C_{LOAD} | Load Capacitance | 0 | — | 70 | pF |

[1] C_{LOAD} includes the low equivalent transmission line capacitance. The capacitance of TX and RX are assumed to always be < 10 pF. The distributed line capacitance can be up to 50 pF for a transmission line with 2 ns delay.

[2] The rise-time of TREOT starts from the HS common-level at the moment of the differential amplitude drops below 70 mV, due to stopping the differential drive.

[3] With an additional load capacitance CCM between 0 to 60 pF on the termination center tap at RX side of the lane.

[4] This parameter value can be lower than TLPX due to differences in rise vs. fall signal slopes and trip levels and mismatches between Dp and Dn LP transmitters. Any LP exclusive-OR pulse observed during HS EoT (transition from HS level to LP-11) is glitch behavior as described in Low-Power Receiver section.

[5] When the output voltage is between 15% and below 85% of the fully settled LP signal levels.

[6] Measured as average across any 50 mV segment of the output signal transition.

[7] This value represents a corner point in a piecewise linear curve.

4.9.1.4 MIPI LP-RX specifications

Table 42. MIPI low power receiver DC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|---------------|---|-----|-----|-----|------|
| V_{IH} | Logic 1 input voltage | 740 | — | — | mV |
| V_{IL} | Logic 0 input voltage, not in ULP state | — | — | 550 | mV |
| $V_{IL-ULPS}$ | Logic 0 input voltage, ULP state | — | — | 300 | mV |
| V_{HYST} | Input hysteresis | 25 | — | — | mV |

Table 43. MIPI low power receiver AC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|-----------------------|------------------------------|-----|-----|-----|------|
| $e_{SPIKE}^{[1],[2]}$ | Input pulse rejection | — | — | 300 | V.ps |
| $T_{MIN-RX}^{[3]}$ | Minimum pulse width response | 20 | — | — | ns |
| V_{INT} | Peak Interference amplitude | — | — | 200 | mV |
| f_{INT} | Interference frequency | 450 | — | — | MHz |

[1] Time-voltage integration of a spike above V_{IL} when in LP-0 state or below V_{IH} when in LP-1 state.

[2] An impulse below this value will not change the receiver state.

[3] An input pulse greater than this value shall toggle the output.

4.9.1.5 MIPI LP-CD specifications

Table 44. MIPI contention detector DC specifications

| Symbol | Parameter | Min | Typ | Max | Unit |
|------------|------------------------------|-----|-----|-----|------|
| V_{IHCD} | Logic 1 contention threshold | 450 | — | — | mV |
| V_{ILCD} | Logic 0 contention threshold | — | — | 200 | mV |

4.9.2 LCD Controller (LCDIF) timing parameters

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

Figure 14 shows the LCDIF timing and Table 45 lists the timing parameters.

Figure 14. LCD timing

Table 45. LCD timing parameters^{[1][2]}

| ID | Parameter | Symbol | Min | Max | Unit |
|----|---|----------------|------|-----|------|
| L1 | LCD pixel clock frequency ^[3] | tCLK(LCD) | — | 80 | MHz |
| L2 | LCD pixel clock high (falling edge capture) | tCLKH(LCD) | 5 | — | ns |
| L3 | LCD pixel clock low (rising edge capture) | tCLKL(LCD) | 5 | — | ns |
| L4 | LCD pixel clock high to data valid (falling edge capture) | td(CLKH-DV) | -1.5 | 1.5 | ns |
| L5 | LCD pixel clock low to data valid (rising edge capture) | td(CLKL-DV) | -1.5 | 1.5 | ns |
| L6 | LCD pixel clock high to control signal valid (falling edge capture) | td(CLKH-CTRLV) | -1.5 | 1.5 | ns |
| L7 | LCD pixel clock low to control signal valid (rising edge capture) | td(CLKL-CTRLV) | -1.5 | 1.5 | ns |

[1] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm, unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO of the I/O pad output driver.

[2] Input timing assumes an input signal slew rate of 3 ns (20%/80%).

[3] The maximum frequency supported is 52 MHz when NVCC_xxxx operating at 3.3 V.

4.10 Audio

This section provides information about audio subsystem.

4.10.1 SAI switching specifications

This section provides the AC timings for the SAI in Controller (clocks driven) and Target (clocks input) modes. All timings are given for non inverted serial clock polarity (SAI_TCR2[BCP] = 0, SAI_RCR2[BCP] = 0) and non inverted frame sync (SAI_TCR4[FSP] = 0, SAI_RCR4[FSP] = 0). If the polarity of the clock and/or the frame sync have been inverted, all the timings remain valid by inverting the clock signal (SAI_BCLK) and/or the frame sync (SAI_FS) shown in the figures below.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

For the 50 MHz BCLK operation, the BCLK and SYNC must always be in the same direction as the data (source synchronous):

- SAI transmitter must be in asynchronous mode with BCLK and SYNC configuration as outputs
- SAI receiver must be:
 - In asynchronous mode with BCLK and SYNC configuration as inputs
 - In synchronous mode with SAI_RCR2[BCI] = 1

Table 46. Controller mode SAI timing (50 MHz)^{[1][2][3]}

| Num | Characteristic | Min | Max | Unit |
|-----|--|-----|-----|-------------|
| S1 | SAI_MCLK cycle time | 20 | — | ns |
| S2 | SAI_MCLK pulse width high/low | 40% | 60% | MCLK period |
| S3 | SAI_BCLK cycle time | 20 | — | ns |
| S4 | SAI_BCLK pulse width high/low | 40% | 60% | BCLK period |
| S5 | SAI_BCLK to SAI_FS output valid | — | 3 | ns |
| S6 | SAI_BCLK to SAI_FS output invalid | -2 | — | ns |
| S7 | SAI_BCLK to SAI_TXD valid | — | 3 | ns |
| S8 | SAI_BCLK to SAI_TXD invalid | -2 | — | ns |
| S9 | SAI_RXD/SAI_FS input setup before SAI_BCLK | 3 | — | ns |
| S10 | SAI_RXD/SAI_FS input hold after SAI_BCLK | 2 | — | ns |

[1] To achieve 50 MHz for BCLK operation, clock must be set in feedback mode.
 [2] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [3] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm. Unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO of the I/O pad output driver.

Table 47. Controller mode SAI timing (25 MHz)^{[1][2]}

| Num | Characteristic | Min | Max | Unit |
|-----|--|-----|-----|-------------|
| S1 | SAI_MCLK cycle time | 40 | — | ns |
| S2 | SAI_MCLK pulse width high/low | 40% | 60% | MCLK period |
| S3 | SAI_BCLK cycle time | 40 | — | ns |
| S4 | SAI_BCLK pulse width high/low | 40% | 60% | BCLK period |
| S5 | SAI_BCLK to SAI_FS output valid | — | 3 | ns |
| S6 | SAI_BCLK to SAI_FS output invalid | -2 | — | ns |
| S7 | SAI_BCLK to SAI_TXD valid | — | 3 | ns |
| S8 | SAI_BCLK to SAI_TXD invalid | -2 | — | ns |
| S9 | SAI_RXD/SAI_FS input setup before SAI_BCLK | 8 | — | ns |
| S10 | SAI_RXD/SAI_FS input hold after SAI_BCLK | 0 | — | ns |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [2] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm. Unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO of the I/O pad output driver.

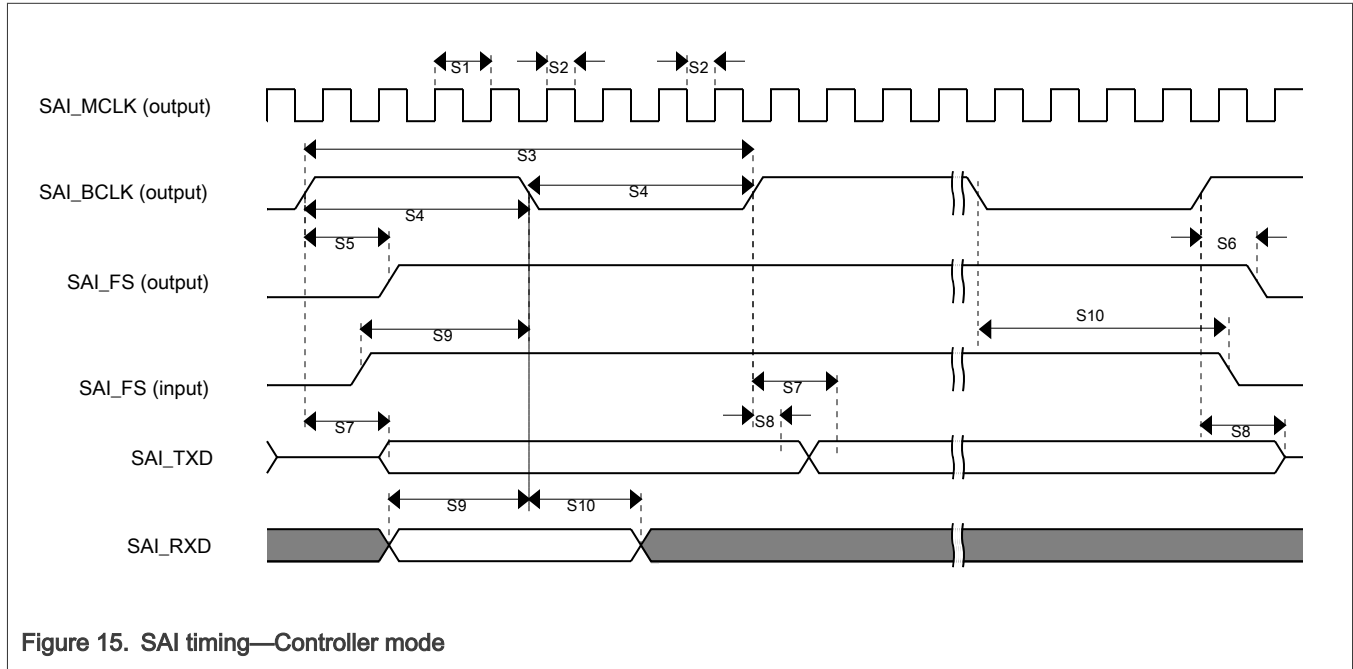

Figure 15. SAI timing—Controller mode

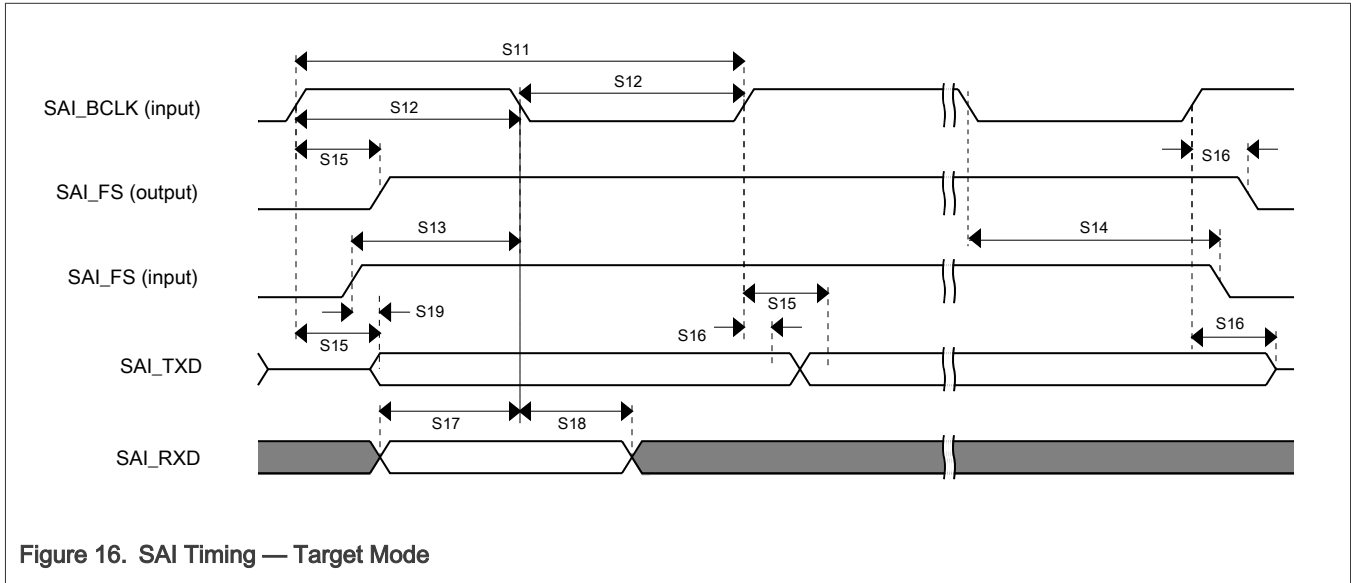

Table 48. Target mode SAI timing (25 MHz)^{[1][2]}

| Num | Characteristic | Min | Max | Unit |
|-----|---|-----|-----|-------------|
| S11 | SAI_BCLK cycle time (input) | 40 | — | ns |
| S12 | SAI_BCLK pulse width high/low (input) | 40% | 60% | BCLK period |
| S13 | SAI_FS input setup before SAI_BCLK | 3 | — | ns |
| S14 | SAI_FS input hold after SAI_BCLK | 2 | — | ns |
| S15 | SAI_BCLK to SAI_TXD/SAI_FS output valid | — | 9 | ns |
| S16 | SAI_BCLK to SAI_TXD/SAI_FS output invalid | 0 | — | ns |
| S17 | SAI_RXD setup before SAI_BCLK | 3 | — | ns |
| S18 | SAI_RXD hold after SAI_BCLK | 2 | — | ns |
| S19 | SAI_FS input assertion to SAI_TXD output valid ^[3] | — | 25 | ns |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).

[2] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm. Underterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSON of the I/O pad output driver.

[3] Applies to first bit in each frame and only if the TCR4[FSE] bit is clear.

4.10.2 SPDIF timing parameters

The Sony/Philips Digital Interconnect Format (SPDIF) data is sent using the bi-phase marking code. When encoding, the SPDIF data signal is modulated by a clock that is twice the bit rate of the data signal.

Table 49 and Figure 17 and Figure 18 show SPDIF timing parameters for the Sony/Philips Digital Interconnect Format (SPDIF), including the timing of the modulating Rx clock (SPDIF_SR_CLK) for SPDIF in Rx mode and the timing of the modulating Tx clock (SPDIF_ST_CLK) for SPDIF in Tx mode.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

Table 49. SPDIF timing parameters

| Parameter | Symbol | Timing Parameter Range | | Unit |
|--|--------|------------------------|------|------|
| | | Min | Max | |
| SPDIF_IN Skew: asynchronous inputs, no specs apply | — | — | 0.7 | ns |
| SPDIF_OUT output (Load = 50 pf) | — | — | 1.5 | ns |
| • Skew | — | — | 24.2 | |
| • Transition rising | — | — | 31.3 | |
| • Transition falling | — | — | | |
| SPDIF_OUT output (Load = 30 pf) | — | — | 1.5 | ns |
| • Skew | — | — | 13.6 | |
| • Transition rising | — | — | 18.0 | |
| • Transition falling | — | — | | |
| Modulating Rx clock (SPDIF_SR_CLK) period | srckp | 40.0 | — | ns |
| SPDIF_SR_CLK high period | srckph | 16.0 | — | ns |

Table continues on the next page...

Table 49. SPDIF timing parameters ...continued

| Parameter | Symbol | Timing Parameter Range | | Unit |
|---|--------|------------------------|-----|------|
| | | Min | Max | |
| SPDIF_SR_CLK low period | srckpl | 16.0 | — | ns |
| Modulating Tx clock (SPDIF_ST_CLK) period | stcklp | 40.0 | — | ns |
| SPDIF_ST_CLK high period | stckph | 16.0 | — | ns |
| SPDIF_ST_CLK low period | stckpl | 16.0 | — | ns |

Figure 17. SPDIF_SR_CLK timing diagram

Figure 18. SPDIF_ST_CLK timing diagram

4.10.3 PDM Microphone interface timing parameters

Note: These timing requirements apply only if the clock divider is enabled ($PDM_CTRL2[CLKDIV] = 0$), otherwise there are no special timing requirements.

The PDM microphones must meet the setup and hold timing requirements shown in the following table. The "k" factor value in Table 50 depends on the selected quality mode as shown in Table 51.

Table 50. PDM timing parameters

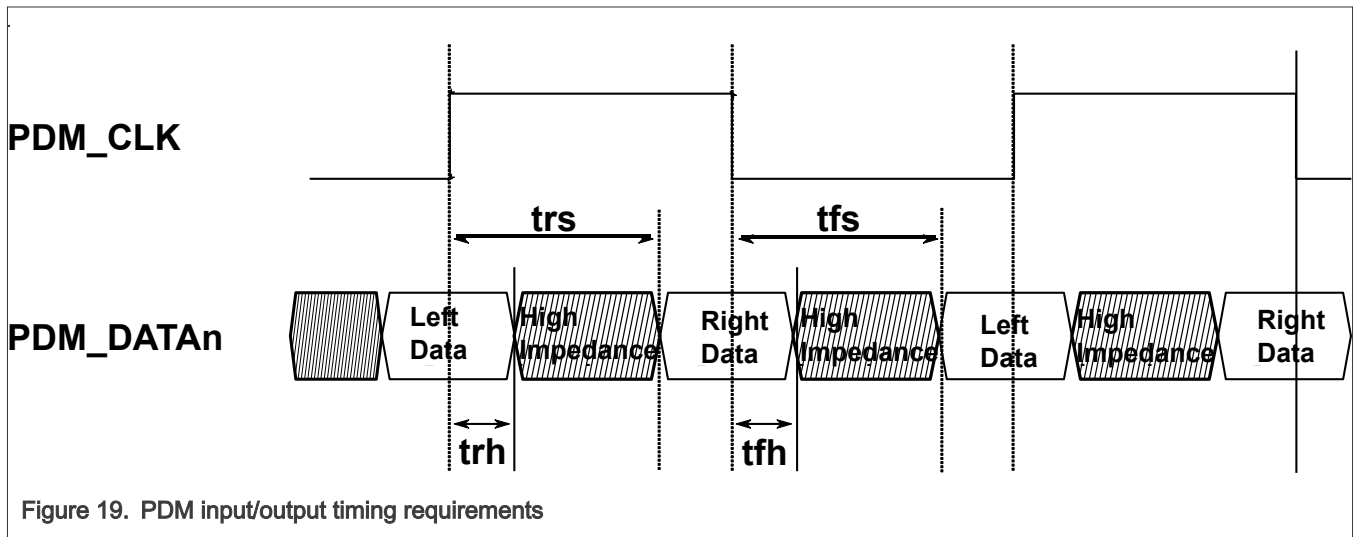

| Parameter | Value |
|-----------|--|
| trs, tfs | $\leq \frac{\text{floor}(k \times \text{CLKDIV}) - 1}{@ (\text{moduleNickname})_CLK_ROOTrate}$ |
| | [1] |
| trh, tfh | ≥ 0 |

[1] Depending on K value, user must make sure floor (K x CLKDIV) > 1 to avoid timing problems.

Table 51. K factor value

| Quality factor | K factor |
|------------------------------------|----------|
| High Quality | 1/2 |
| Medium Quality, Very Low Quality 0 | 1 |
| Low Quality, Very Low Quality 1 | 2 |
| Very Low Quality 2 | 4 |

Figure 19 illustrates the timing requirements for the PDM.

4.10.4 Medium Quality Sound (MQS) electrical specifications

Medium quality sound (MQS) is used to generate medium quality audio via a standard GPIO in the pinmux, allowing the user to connect stereo speakers or headphones to a power amplifier without an additional DAC chip. Two outputs are asynchronous PWM pulses and their maximum frequency is 1/32 x mclk_frequency.

Table 52. MQS specifications

| Symbol | Description | Min | Typ | Max | Unit |
|---------------------|---|-----|--------|------|------|
| $f_{mclk}^{[1][2]}$ | Bit clock is used to generate the mclk. | — | 24.576 | 66.5 | MHz |

[1] Frequency of mclk depends on software settings.

Please see [General purpose I/O \(GPIO\) AC parameters](#) for other electrical parameters.

[2] The maximum frequency supported is 52 MHz when NVCC_xxxx operating at 3.3 V.

4.11 Analog

The following sections introduce the timing and electrical parameters about analog interfaces of i.MX 93 processors.

4.11.1 12-bit ADC electrical specifications

All ADC channels meet the 12-bit single-ended accuracy specifications.

Table 53. ADC electrical specifications

| Symbol | Description | Min | Typ | Max | Unit | Notes |
|-------------------------|--|--|------|------------------|-------|-----------------|
| V _{ADIN} | Input voltage | V _{GND} | — | V _{DDA} | V | [1] |
| f _{AD_CK} | ADC clock frequency | 20 | — | 80 | MHz | — |
| C _{sample} | Sample cycles | 5.5 | — | — | Cycle | — |
| C _{compare} | Fixed compare cycles | — | 58 | — | Cycle | — |
| C _{conversion} | Conversion cycles | C _{conversion} = C _{sample} + C _{compare} | | | Cycle | — |
| C _{AD_INPUT} | ADC input capacitance | — | — | 7 | pF | [2] |
| R _{AD_INPUT} | ADC input series resistance | — | — | 1.25 | KΩ | — |
| DNL | ADC differential nonlinearity | — | ±2 | — | LSB | [3] |
| INL | ADC integral nonlinearity | — | ±6 | — | LSB | [3] |
| R _{AS} | Analog source resistance | — | — | 5 | KΩ | — |
| Bandgap | Output voltage ready time for bandgap | — | 1 | — | μs | [4] |
| ENOB | Effective number of bits: Single-ended mode (11 x 11 mm package, PWM) | — | 9.8 | — | bit | [5],[6],[7],[8] |
| | Effective number of bits: Single-ended mode (11 x 11 mm package, PFM) | — | 9.4 | — | | |
| | Effective number of bits: Single-ended mode (9 x 9 mm package, PWM) | — | 9.2 | — | | |
| | Effective number of bits: Single-ended mode (9 x 9 mm package, PFM) | — | 8.5 | — | | |
| | Effective number of bits: Single-ended mode (14 x 14 mm package, PWM) | — | 10.5 | — | | |
| | Effective number of bits: Single-ended mode (14 x 14 mm package, PFM) | — | 10.1 | — | | |

[1] On or off channels
 [2] ADC component plus pad capacitance (~ 2 pF)
 [3] After calibration
 [4] Based on simulation test
 [5] Noise on the ADC reference voltage (VDD_ANA1P8) will result in performance loss of the ADC proportional to the noise present.
 [6] Input data used for test is 1 kHz sine wave.
 [7] Measured at VREFH = 1.8 V and pwrsel = 2.

[8] ENOB can be lower than shown, if an ADC channel corrupts other ADC channels through capacitive coupling. This coupling may be dominated by board parasitics. Care must be taken not to corrupt the desired channel being measured. This coupling becomes worse at higher analog frequencies and with switching waveforms due to the harmonic content.

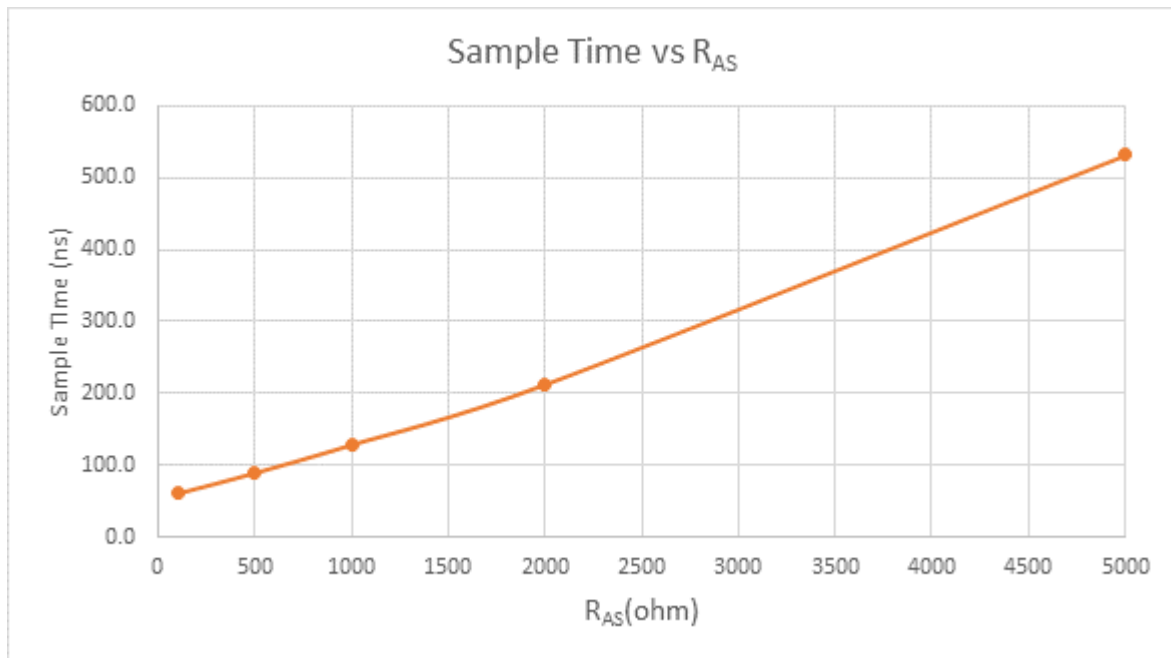

Figure 20. Sample time vs R_{AS}

4.11.2 12-bit ADC input impedance equivalent circuit diagram

There is an additional R_{IOMUX} of 350 Ω (from 295 Ω to 405 Ω) resistance if an input goes through the MUX inside the IO and C_P of 2.5 pF as shown in Figure 21.

To calculate the sample request time, using the following equation where R_{ADCtotal} = R_{ADIN} + R_{IOMUX}, R_{IOMUX} = 350 Ω, C_P = 2.5 pF and B = 11 for 1/4 LSB settling.

$$T_{\text{smp_req}} = B [R_{AS} (C_{AS} + C_P + C_{ADIN}) + (R_{AS} + R_{ADCtotal}) C_{ADIN}]$$

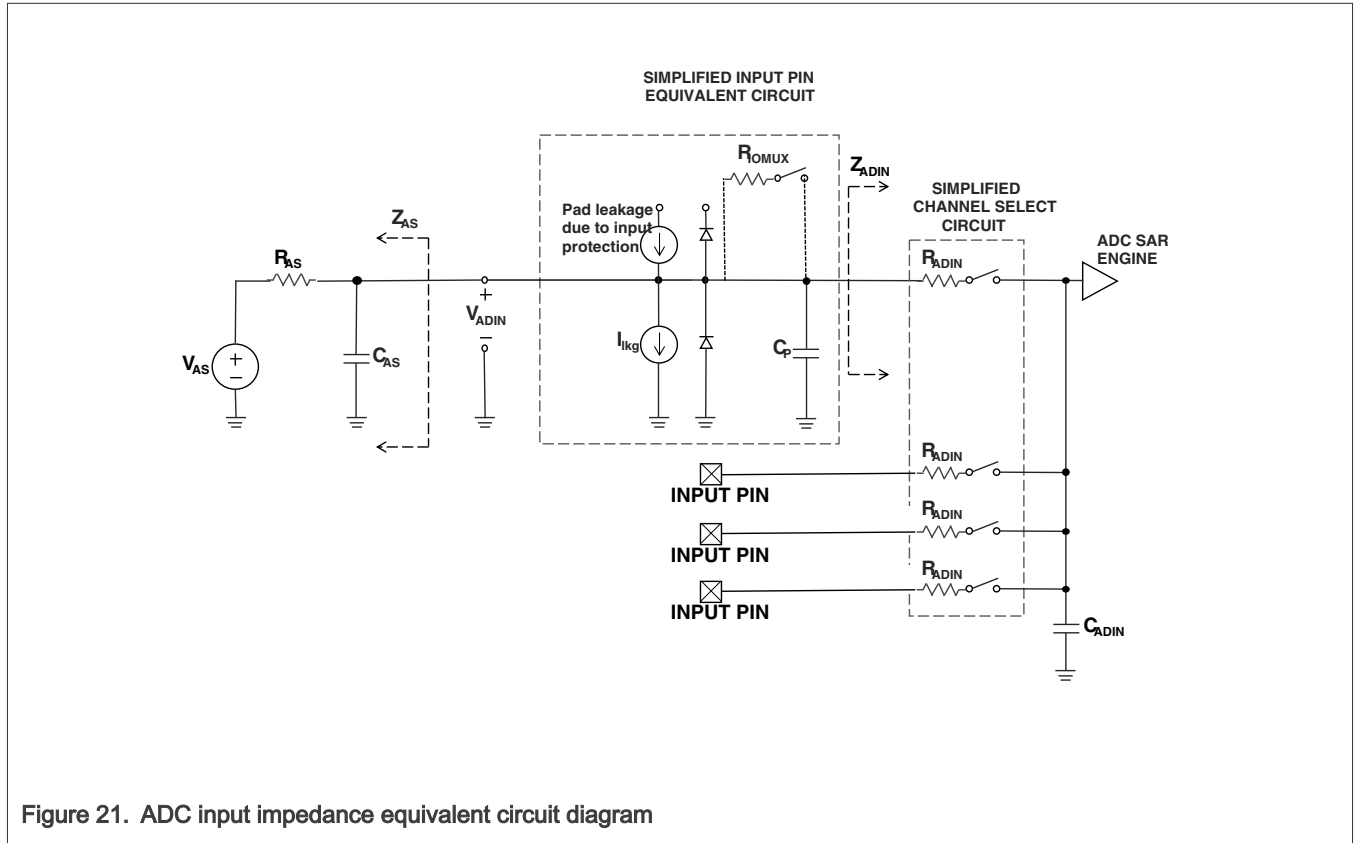

Figure 21. ADC input impedance equivalent circuit diagram

4.12 External peripheral interface parameters

The following subsections provide information on external peripheral interfaces.

4.12.1 Ultra-high-speed SD/SDIO/MMC host interface (uSDHC) AC timing

This section describes the electrical information of the uSDHC, which includes SD/eMMC5.1 (single data rate) timing, eMMC5.1/SD3.0 (dual data rate) timing and SDR50/SDR104 AC timing.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

4.12.1.1 SD3.0/eMMC5.1 (single data rate) AC timing

Figure 22 depicts the timing of SD3.0/eMMC5.1, and Table 54 lists the SD3.0/eMMC5.1 timing characteristics.

Figure 22. SD3.0/eMMC5.1 (SDR) timing

Table 54. SD3.0/eMMC5.1 (SDR) interface timing specification^{[1],[2]}

| ID | Parameter | Symbols | Min | Max | Unit |
|--|---|----------------|------|-------|------|
| Card Input Clock | | | | | |
| SD1 | Clock Frequency (Low Speed) | $f_{PP}^{[3]}$ | 0 | 400 | kHz |
| | Clock Frequency (SD/SDIO Full Speed/High Speed) | $f_{PP}^{[4]}$ | 0 | 25/50 | MHz |
| | Clock Frequency (MMC Full Speed/High Speed) | $f_{PP}^{[5]}$ | 0 | 20/52 | MHz |
| | Clock Frequency (Identification Mode) | f_{OD} | 100 | 400 | kHz |
| SD2 | Clock Low Time | t_{WL} | 7 | — | ns |
| SD3 | Clock High Time | t_{WH} | 7 | — | ns |
| SD4 | Clock Rise Time | t_{TLH} | — | 3 | ns |
| SD5 | Clock Fall Time | t_{THL} | — | 3 | ns |
| uSDHC Output/Card Inputs SD_CMD, SDx_DATAx (Reference to CLK) | | | | | |
| SD6 | uSDHC Output Delay | t_{OD} | -6.6 | 3.6 | ns |
| uSDHC Input/Card Outputs SD_CMD, SDx_DATAx (Reference to CLK) | | | | | |
| SD7 | uSDHC Input Setup Time | t_{ISU} | 2.5 | — | ns |
| SD8 | uSDHC Input Hold Time ^[6] | t_{IH} | 1.5 | — | ns |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [2] Output timing valid for maximum external load $CL = 25$ pF, which is assumed to be a 10 pF load at the end of a 50 ohm, unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO of the I/O pad output driver.
 [3] In Low-Speed mode, card clock must be lower than 400 kHz, voltage ranges from 2.7 to 3.6 V.
 [4] In Normal (Full) -Speed mode for SD/SDIO card, clock frequency can be any value between 0 – 25 MHz. In High-speed mode, clock frequency can be any value between 0 – 50 MHz.
 [5] In Normal (Full) -Speed mode for MMC card, clock frequency can be any value between 0 – 20 MHz. In High-speed mode, clock frequency can be any value between 0 – 52 MHz.
 [6] To satisfy hold timing, the delay difference between clock input and cmd/data input must not exceed 2 ns.

4.12.1.2 SD3.0/eMMC5.1 (dual data rate) AC timing

Figure 23 depicts the timing of SD3.0/eMMC5.1 (DDR). Table 55 lists the SD3.0/eMMC5.1 (DDR) timing characteristics. Be aware that only DATA is sampled on both edges of the clock (not applicable to CMD).

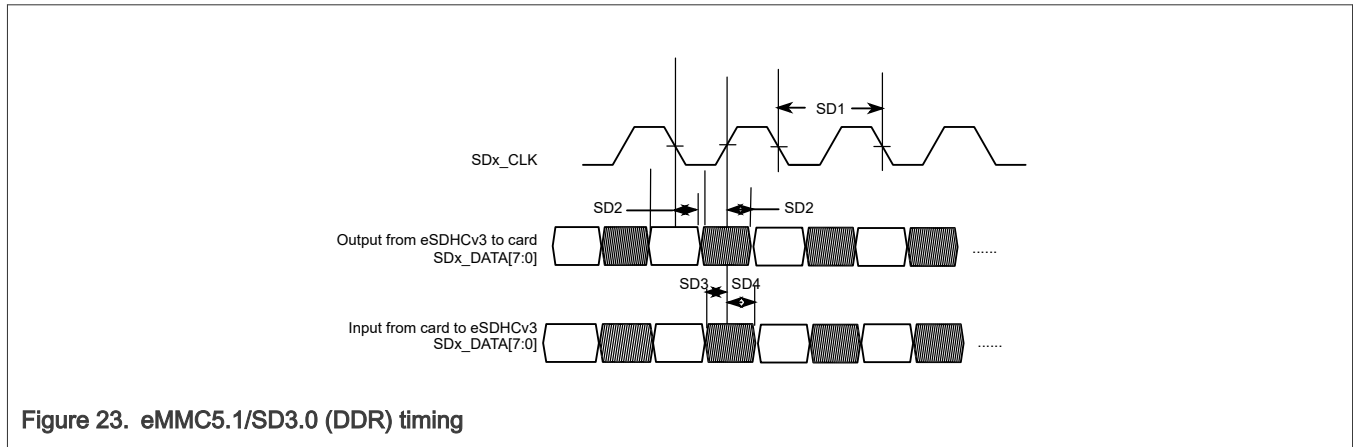

Figure 23. eMMC5.1/SD3.0 (DDR) timing

Table 55. SD3.0/eMMC5.1 (DDR) interface timing specification^{[1],[2]}

| ID | Parameter | Symbols | Min | Max | Unit |
|--|-------------------------------|-----------|-----|-----|------|
| Card Input Clock | | | | | |
| SD1 | Clock Frequency (eMMC5.1 DDR) | f_{PP} | 0 | 52 | MHz |
| SD1 | Clock Frequency (SD3.0 DDR) | f_{PP} | 0 | 50 | MHz |
| uSDHC Output / Card Inputs SD_CMD, SDx_DATAx (Reference to CLK) | | | | | |
| SD2 | uSDHC Output Delay | t_{OD} | 2.8 | 6.8 | ns |
| uSDHC Input / Card Outputs SD_CMD, SDx_DATAx (Reference to CLK) | | | | | |
| SD3 | uSDHC Input Setup Time | t_{ISU} | 2.4 | — | ns |
| SD4 | uSDHC Input Hold Time | t_{IH} | 1.5 | — | ns |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).

[2] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm, unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO of the I/O pad output driver.

4.12.1.3 HS400 DDR AC timing

Figure 24 depicts the timing of HS400 mode, Table 56 and Table 57 list the HS400 timing characteristics. Be aware that only data is sampled on both edges of the clock (not applicable to CMD). The CMD input/output timing for HS400 mode is the same as CMD input/output timing for SDR104 mode. Check SD5, SD6, and SD7 parameters in Table 60 and Table 61 for HS400 mode.

Figure 24. HS400 timing

Table 56. HS400 interface timing specification (Nominal and Overdrive mode)^{[1],[2]}

| ID | Parameter | Symbols | Min | Max | Unit |
|---|--------------------------------------|--------------|------|------|------|
| Card Input Clock | | | | | |
| SD1 | Clock frequency | f_{PP} | 0 | 200 | MHz |
| SD2 | Clock low time | t_{CL} | 2.2 | — | ns |
| SD3 | Clock high time | t_{CH} | 2.2 | — | ns |
| uSDHC Output/Card Inputs DAT (Reference to SCK) | | | | | |
| SD4 | Output skew from Data of edge of SCK | t_{OSkew1} | 0.45 | — | ns |
| SD5 | Output skew from SCK to Data of edge | t_{OSkew2} | 0.45 | — | ns |
| uSDHC Input/Card Outputs DAT (Reference to Strobe) | | | | | |
| SD6 | uSDHC input skew | t_{RQ} | — | 0.45 | ns |
| SD7 | uSDHC hold skew | t_{RQH} | — | 0.45 | ns |

[1] Input timing assumes an input signal slew rate of 1 ns (20%/80%).

[2] Output timing valid for maximum external load $CL = 15$ pF, which is assumed to be a 8 pF load at the end of a 50 ohm, unterminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance of the transmission line should be matched closely to the $RDSON$ of the I/O pad output driver.

Table 57. HS400 interface timing specification (Low drive mode)^{[1],[2]}

| ID | Parameter | Symbols | Min | Max | Unit |
|-------------------------|-----------------|----------|-----|-----|------|
| Card Input Clock | | | | | |
| SD1 | Clock frequency | f_{PP} | 0 | 133 | MHz |

Table continues on the next page...

Table 57. HS400 interface timing specification (Low drive mode)^{[1],[2]} ...continued

| ID | Parameter | Symbols | Min | Max | Unit |
|---|--------------------------------------|--------------|------|------|------|
| SD2 | Clock low time | t_{CL} | 3.3 | — | ns |
| SD3 | Clock high time | t_{CH} | 3.3 | — | ns |
| uSDHC Output/Card Inputs DAT (Reference to SCK) | | | | | |
| SD4 | Output skew from data of edge of SCK | t_{OSkew1} | 0.45 | — | ns |
| SD5 | Output skew from edge of SCK to data | t_{OSkew2} | 0.45 | — | ns |
| uSDHC Input/Card Outputs DAT (Reference to Strobe) | | | | | |
| SD6 | uSDHC input skew | t_{RQ} | — | 0.45 | ns |
| SD7 | uSDHC hold skew | t_{RQH} | — | 0.45 | ns |

[1] Input timing assumes an input signal slew rate of 1 ns (20%/80%).

[2] Output timing valid for maximum external load $CL = 15$ pF, which is assumed to be a 8 pF load at the end of a 50 ohm, unterminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance of the transmission line should be matched closely to the R_{DSOn} of the I/O pad output driver.

4.12.1.4 HS200 Mode AC timing

Figure 25 depicts the timing of HS200 mode, Table 58 and Table 59 list the HS200 timing characteristics.

Figure 25. HS200 timing

Table 58. HS200 interface timing specification (Nominal and Overdrive mode)^{[1],[2]}

| ID | Parameter | Symbols | Min | Max | Unit |

| uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in HS200 (Reference to CLK)^[3] | | | | | |
| SD8 | uSDHC Input Data Window | t_{ODW} | $0.475 \times t_{CLK}$ | — | ns |

[1] Input timing assumes an input signal slew rate of 1 ns (20%/80%).

[2] Output timing valid for maximum external load CL = 15 pF, which is assumed to be a 8 pF load at the end of a 50 ohm, unterminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance of the transmission line should be matched closely to the RDSON of the I/O pad output driver.

[3] HS200 is for 8 bits while SDR104 is for 4 bits.

4.12.1.5 SDR50/SDR104 AC timing

Figure 26 depicts the timing of SDR50/SDR104, Table 60 and Table 61 list the SDR50/SDR104 timing characteristics.

Figure 26. SDR50/SDR104 timing

Table 60. SDR50/SDR104 interface timing specification (Nominal and Overdrive mode)^{[1],[2]}

| ID | Parameter | Symbols | Min | Max | Unit |
|--|-------------------------|-----------|----------------------|-----|------|
| Card Input Clock | | | | | |
| SD1 | Clock Frequency Period | t_{CLK} | 5 | — | ns |
| SD2 | Clock Low Time | t_{CL} | 2.2 | — | ns |
| SD3 | Clock High Time | t_{CH} | 2.2 | — | ns |
| uSDHC Output/Card Inputs SD_CMD, SDx_DATAx in SDR50 (Reference to CLK) | | | | | |
| SD4 | uSDHC Output Delay | t_{OD} | -3 | 1 | ns |
| uSDHC Output/Card Inputs SD_CMD, SDx_DATAx in SDR104 (Reference to CLK) | | | | | |
| SD5 | uSDHC Output Delay | t_{OD} | -1.6 | 1 | ns |
| uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in SDR50 (Reference to CLK) | | | | | |
| SD6 | uSDHC Input Setup Time | t_{ISU} | 2.4 | — | ns |
| SD7 | uSDHC Input Hold Time | t_{IH} | 1.5 | — | ns |
| uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in SDR104 (Reference to CLK)^[3] | | | | | |
| SD8 | uSDHC Input Data Window | t_{ODW} | $0.5 \times t_{CLK}$ | — | ns |

[1] Input timing assumes an input signal slew rate of 1 ns (20%/80%).

[2] Output timing valid for maximum external load $CL = 15$ pF, which is assumed to be a 8 pF load at the end of a 50 ohm, unterminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance of the transmission line should be matched closely to the RDSON of the I/O pad output driver.

[3] Data window in SDR100 mode is variable.

Table 61. SDR50/SDR104 interface timing specification (Low drive mode)^{[1],[2]}

| ID | Parameter | Symbols | Min | Max | Unit |
|--|-------------------------|-----------|----------------------|-----|------|
| Card Input Clock | | | | | |
| SD1 | Clock Frequency Period | t_{CLK} | 7.5 | — | ns |
| SD2 | Clock Low Time | t_{CL} | 3.3 | — | ns |
| SD3 | Clock High Time | t_{CH} | 3.3 | — | ns |
| uSDHC Output/Card Inputs SD_CMD, SDx_DATAx in SDR50 (Reference to CLK) | | | | | |
| SD4 | uSDHC Output Delay | t_{OD} | -3 | 1 | ns |
| uSDHC Output/Card Inputs SD_CMD, SDx_DATAx in SDR104 (Reference to CLK) | | | | | |
| SD5 | uSDHC Output Delay | t_{OD} | -1.6 | 1 | ns |
| uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in SDR50 (Reference to CLK) | | | | | |
| SD6 | uSDHC Input Setup Time | t_{ISU} | 2.4 | — | ns |
| SD7 | uSDHC Input Hold Time | t_{IH} | 1.5 | — | ns |
| uSDHC Input/Card Outputs SD_CMD, SDx_DATAx in SDR104 (Reference to CLK)^[3] | | | | | |
| SD8 | uSDHC Input Data Window | t_{ODW} | $0.5 \times t_{CLK}$ | — | ns |

[1] Input timing assumes an input signal slew rate of 1 ns (20%/80%).

[2] Output timing valid for maximum external load $CL = 15$ pF, which is assumed to be a 8 pF load at the end of a 50 ohm, unterminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance of the transmission line should be matched closely to the R_{DSO}n of the I/O pad output driver.

[3] Data window in SDR100 mode is variable.

4.12.1.6 Bus operation condition for 3.3 V and 1.8 V signaling

Signaling level of SD/eMMC4.5/5.0/5.1 can be 1.8 V or 3.3 V depending on the working mode. The DC parameters for NVCC_SD2 supplies are identical to those shown in [General purpose I/O \(GPIO\) DC parameters](#).

4.12.1.7 uSDHC supported modes

For SD:

- All SD 3.0 protocols are supported at full speeds on all three SDHC interfaces. This includes DS, HS, SDR12, SDR25, SDR50, SDR104, and DDR50.
- The maximum supported SDR frequency is 200 MHz which is covered in SDR104 mode, and maximum DDR frequency is 50 MHz as a part of DDR50 mode.

For eMMC:

- eMMC HS400 is only supported on SDHC1 as that is the only one with 8-bit interface.
- eMMC HS200 is supported on all three SDHC interfaces because this protocol supports both 4-bit mode and 8-bit mode, which can work on SDHC2 and SDHC3.
- eMMC High Speed DDR, High Speed SDR, and less than or equal to 26 MHz MMC legacy protocols are also supported on all three SDHC interfaces.

- The maximum supported SDR frequency is 200 MHz which is covered in HS200 mode, and the maximum DDR frequency is 200 MHz as a part of HS400 mode.

uSDHC3 supports up to SDR104 (200 MHz) on primary SD3_* pins, but when it is multiplexing on GPIO_IO[27:22], below are the modes supported:

- eMMC High Speed DDR, High Speed SDR, and less than or equal to 26 MHz MMC legacy protocols are supported.
- SDR50 (100 MHz) and SDR104 (200 MHz) modes are NOT supported.
- eMMC HS400 and HS200 modes are NOT supported
- The maximum supported SDR and DDR frequency is 50 and 52 MHz

If IO is supplied by 3.3 V, the maximum supported SDR/DDR frequency is 50/52 MHz

4.12.2 Ethernet controller (ENET) AC electrical specifications

Ethernet supports the following key features:

- Support ENET AVB
- Support IEEE 1588
- Support Energy Efficient Ethernet (EEE)
- 1.8 V/3.3 V RMII operation, 1.8 V RGMII operation

The following sections introduce the ENET AC electrical specifications.

4.12.2.1 ENET2 signal mapping

The following timing specs are defined at the chip I/O pin and must be translated appropriately to arrive at timing specs/constraints for the physical interface.

Table 62. ENET2 signal mapping^[1]

| Pad name | RGMII | Alt mode | RMII | Alt mode | Direction |
|--------------|--------------|----------|-----------------------------|----------|-----------|
| ENET2_MDC | RGMII_MDC | Alt 0 | RMII_MDC | Alt 0 | O |
| ENET2_MDIO | RGMII_MDIO | Alt 0 | RMII_MDIO | Alt 0 | I/O |
| ENET2_TXC | RGMII_TXC | Alt 0 | RMII_TX_ER | Alt 1 | O |
| ENET2_TX_CTL | RGMII_TX_CTL | Alt 0 | RMII_TX_EN | Alt 0 | O |
| ENET2_TD0 | RGMII_TD0 | Alt 0 | RMII_TD0 | Alt 0 | O |
| ENET2_TD1 | RGMII_TD1 | Alt 0 | RMII_TD1 | Alt 0 | O |
| ENET2_TD2 | RGMII_TD2 | Alt 0 | RMII_REF_CLK ^[2] | Alt 1 | I/O |
| ENET2_TD3 | RGMII_TD3 | Alt 0 | — | Alt 0 | O |
| ENET2_RXC | RGMII_RXC | Alt 0 | RMII_RX_ER | Alt 1 | I |
| ENET2_RX_CTL | RGMII_RX_CTL | Alt 0 | RMII_CRSDV | Alt 0 | I |
| ENET2_RD0 | RGMII_RD0 | Alt 0 | RMII_RD0 | Alt 0 | I |

Table continues on the next page...

Table 62. ENET2 signal mapping^{[1]...continued}

| Pad name | RGMII | Alt mode | RMII | Alt mode | Direction |
|-----------|-----------|----------|----------|----------|-----------|
| ENET2_RD1 | RGMII_RD1 | Alt 0 | RMII_RD1 | Alt 0 | I |
| ENET2_RD2 | RGMII_RD2 | Alt 0 | — | Alt 0 | I |
| ENET2_RD3 | RGMII_RD3 | Alt 0 | — | Alt 0 | I |

[1] ENET1 is Ethernet QoS with TSN, while ENET2 is Ethernet MAC.
 [2] The signal can be either input or output.

4.12.2.2 RMII mode timing

In RMII mode, enet1.RMII_CLK is used as the REF_CLK, which is a 50 MHz ± 50 ppm continuous reference clock.

Figure 27 shows RMII mode timings. Table 63 describes the timing parameters (M16–M21) shown in the figure.

Figure 27. RMII mode signal timing diagram

Table 63. RMII signal timing^{[1],[2],[3]}

| ID | Characteristic | Min. | Max. | Unit |
|-----|--|------|------|---------------------|
| M16 | ENET_CLK pulse width high | 35% | 65% | RMII_REF_CLK period |
| M17 | RMII_REF_CLK pulse width low | 35% | 65% | RMII_REF_CLK period |
| M18 | RMII_REF_CLK to ENET0_TXD[1:0], ENET_TX_EN invalid | 2 | — | ns |
| M19 | RMII_REF_CLK to ENET0_TXD[1:0], ENET_TX_EN valid | — | 14 | ns |
| M20 | ENET_RX_DATA[1:0], ENET_CRS_DV, ENET_RX_ER to RMII_REF_CLK setup | 4 | — | ns |
| M21 | RMII_REF_CLK to ENET_RX_DATA[1:0], ENET_CRS_DV, ENET_RX_ER hold | 2 | — | ns |

[1] The timings assume the following configuration: DSE[5:0] = 001111 and FSEL1[1:0] = 11.
 [2] Input timing assumes an input signal slew rate of 3 ns (20%/80%).

[3] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm, unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO_N of the I/O pad output driver.

4.12.2.3 MII serial management channel timing (ENET_MDIO and ENET_MDC)

The MDC frequency is designed to be equal to or less than 2.5 MHz to be compatible with the IEEE 802.3 MII specification.

Figure 28 shows MII asynchronous input timings. Table 64 describes the timing parameters (M10–M15) shown in the figure.

Figure 28. MII serial management channel timing diagram

Table 64. MII serial management channel timing^{[1],[2],[3]}

| ID | Characteristic | Min. | Max. | Unit |
|-----|--|------|------|-----------------|
| M10 | ENET_MDC falling edge to ENET_MDIO output invalid (min. propagation delay) | -1.5 | — | ns |
| M11 | ENET_MDC falling edge to ENET_MDIO output valid (max. propagation delay) | — | 13 | ns |
| M12 | ENET_MDIO (input) to ENET_MDC rising edge setup | 13 | — | ns |
| M13 | ENET_MDIO (input) to ENET_MDC rising edge hold | 0 | — | ns |
| M14 | ENET_MDC pulse width high | 40% | 60% | ENET_MDC period |
| M15 | ENET_MDC pulse width low | 40% | 60% | ENET_MDC period |

[1] The timings assume the following configuration: DSE[5:0] = 001111 and FSEL1[1:0] = 11.

[2] Input timing assumes an input signal slew rate of 3 ns (20%/80%).

[3] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm, unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO_N of the I/O pad output driver.

4.12.2.4 RGMII signal switching specifications

The following timing specifications meet the requirements for RGMII interfaces for a range of transceiver devices.

Table 65. RGMII signal switching specifications^{[1],[2],[3],[4]}

| Symbol | Description | Min. | Max. | Unit |
|-------------|--|------|------|------|
| T_{cyc} | Clock cycle duration | 7.2 | 8.8 | ns |
| T_{skewT} | Data to clock output skew at transmitter | -500 | 500 | ps |
| T_{skewR} | Data to clock input skew at receiver | 1 | 2.6 | ns |
| Duty_G | Duty cycle for Gigabit | 45 | 55 | % |
| Duty_T | Duty cycle for 10/100T | 40 | 60 | % |

- [1] The timings assume the following configuration: DSE[5:0] = 001111 and FSEL1[1:0] = 11.
- [2] Measured as defined in *EIA/JESD 8-6 1995* with a timing threshold voltage of $VDDQ/2$.
- [3] Output timing valid for maximum external load $CL = 15\text{ pF}$, which is assumed to be a 8 pF load at the end of a 50 ohm , unterminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance in the transmission line should be matched closely to the selected $RDSON$ of the I/O pad output driver.
- [4] RGMII timing specifications are only valid for 1.8 V nominal I/O pad supply voltage.

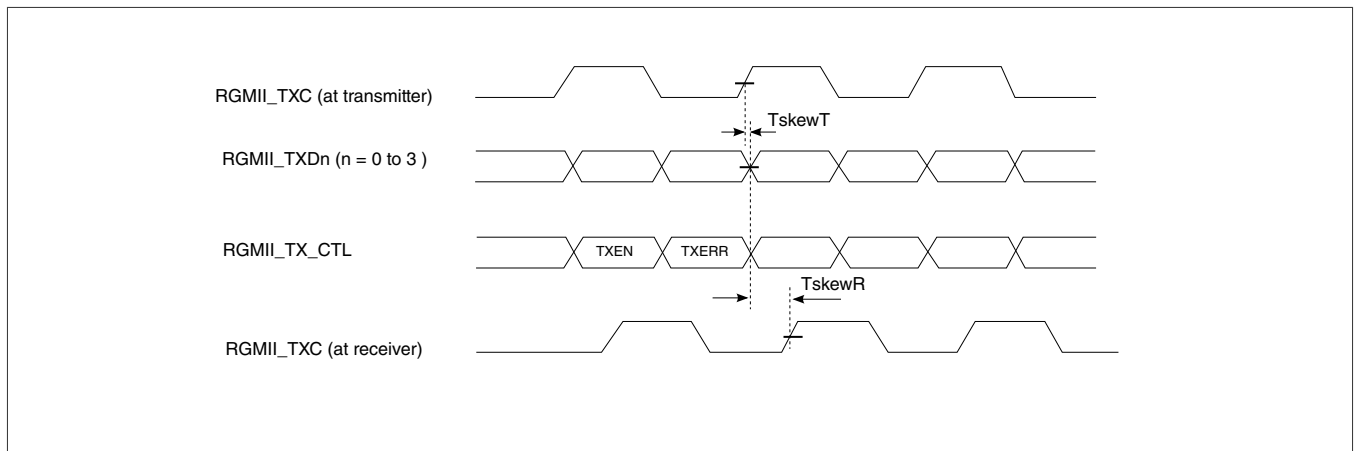

Figure 29. RGMII transmit signal timing diagram original

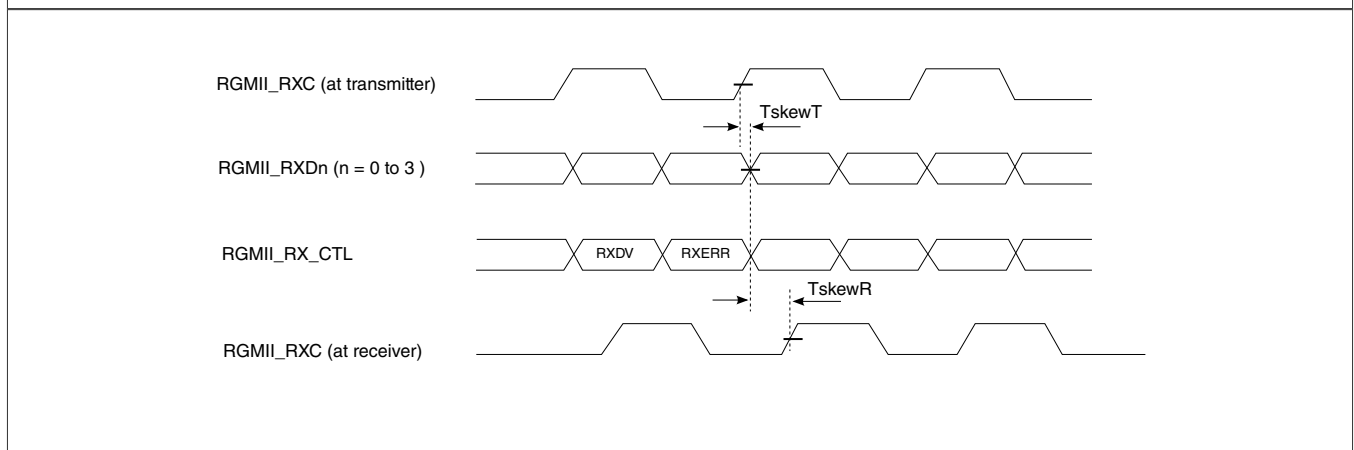

Figure 30. RGMII receive signal timing diagram original

4.12.3 Ethernet Quality-of-Service (QOS) electrical specifications

Ethernet QOS supports the following Time Sensitive Networking (TSN) features:

- 802.1Qbv Enhancements to Scheduling Traffic

- 802.1Qbu Frame preemption
- Time based Scheduling
- 1.8 V/3.3 V RMIi operation, 1.8 V RGMII operation

4.12.3.1 Ethernet QOS signal mapping

The following timing specs are defined at the chip I/O pin and must be translated appropriately to arrive at timing specs/constraints for the physical interface.

Table 66. ENET QOS signal mapping^[1]

| Pad name | RGMII | Alt mode | RMII | Alt mode | Direction |
|--------------|--------------|----------|-----------------------------|----------|-----------|
| ENET1_MDC | RGMII_MDC | Alt 0 | RMII_MDC | Alt 0 | O |
| ENET1_MDIO | RGMII_MDIO | Alt 0 | RMII_MDIO | Alt 0 | I/O |
| ENET1_TXC | RGMII_TXC | Alt 0 | RMII_TX_ER | Alt 1 | O |
| ENET1_TX_CTL | RGMII_TX_CTL | Alt 0 | RMII_TX_EN | Alt 0 | O |
| ENET1_TD0 | RGMII_TD0 | Alt 0 | RMII_TD0 | Alt 0 | O |
| ENET1_TD1 | RGMII_TD1 | Alt 0 | RMII_TD1 | Alt 0 | O |
| ENET1_TD2 | RGMII_TD2 | Alt 0 | RMII_REF_CLK ^[2] | Alt 1 | I/O |
| ENET1_TD3 | RGMII_TD3 | Alt 0 | — | Alt 0 | O |
| ENET1_RXC | RGMII_RXC | Alt 0 | RMII_RX_ER | Alt 1 | I |
| ENET1_RX_CTL | RGMII_RX_CTL | Alt 0 | RMII_CRSDV | Alt 0 | I |
| ENET1_RD0 | RGMII_RD0 | Alt 0 | RMII_RD0 | Alt 0 | I |
| ENET1_RD1 | RGMII_RD1 | Alt 0 | RMII_RD1 | Alt 0 | I |
| ENET1_RD2 | RGMII_RD2 | Alt 0 | — | Alt 0 | I |
| ENET1_RD3 | RGMII_RD3 | Alt 0 | — | Alt 0 | I |

[1] ENET1 is Ethernet QoS with TSN, while ENET2 is Ethernet MAC.

[2] The signal can be either input or output.

4.12.3.2 RMII mode timing

In RMII mode, enet1.RMII_CLK is used as the REF_CLK, which is a 50 MHz ± 50 ppm continuous reference clock.

Figure 31 shows RMII mode timings. Table 67 describes the timing parameters (M16–M21) shown in the figure.

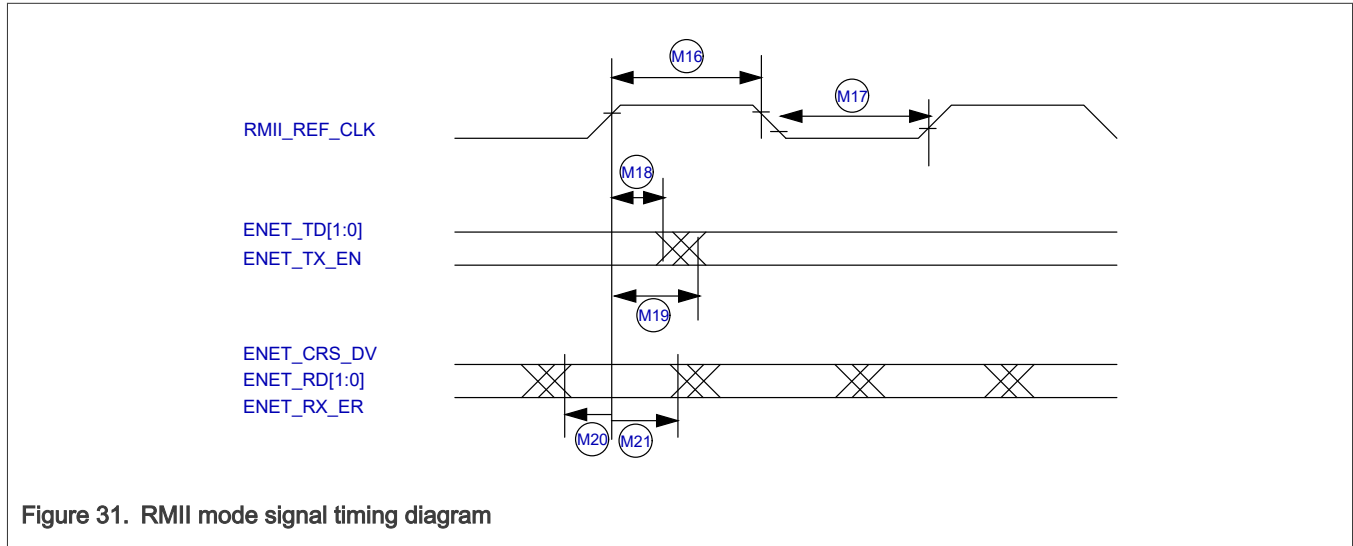

Figure 31. RMI mode signal timing diagram

Table 67. RMI signal timing^{[1],[2],[3]}

| ID | Characteristic | Min. | Max. | Unit |
|-----|---|------|------|--------------------|
| M16 | ENET_CLK pulse width high | 35% | 65% | RMI_REF_CLK period |
| M17 | RMI_REF_CLK pulse width low | 35% | 65% | RMI_REF_CLK period |
| M18 | RMI_REF_CLK to ENET0_TXD[1:0], ENET_TX_EN invalid | 2 | — | ns |
| M19 | RMI_REF_CLK to ENET0_TXD[1:0], ENET_TX_EN valid | — | 14 | ns |
| M20 | ENET_RX_DATA[1:0], ENET_CRD[1:0], ENET_RX_ER to RMI_REF_CLK setup | 4 | — | ns |
| M21 | RMI_REF_CLK to ENET_RX_DATA[1:0], ENET_CRD[1:0], ENET_RX_ER hold | 2 | — | ns |

[1] The timings assume the following configuration: DSE[5:0] = 001111 and FSEL1[1:0] = 11.
 [2] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [3] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm, unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSON of the I/O pad output driver.

4.12.3.3 MII serial management channel timing (ENET_MDIO and ENET_MDC)

The MDC frequency is designed to be equal to or less than 2.5 MHz to be compatible with the IEEE 802.3 MII specification.

Figure 32 shows MII asynchronous input timings. Table 68 describes the timing parameters (M10–M15) shown in the figure.

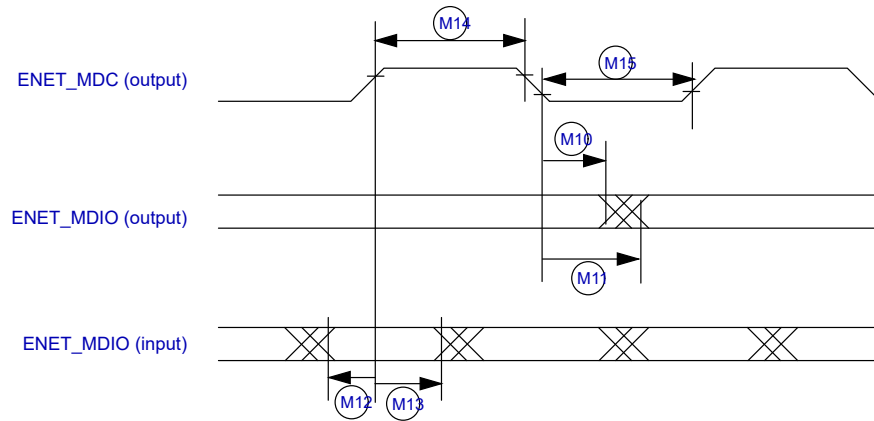

Figure 32. MII serial management channel timing diagram

Table 68. MII serial management channel timing^{[1],[2],[3]}

| ID | Characteristic | Min. | Max. | Unit |
|-----|--|------|------|-----------------|
| M10 | ENET_MDC falling edge to ENET_MDIO output invalid (min. propagation delay) | -1.5 | — | ns |
| M11 | ENET_MDC falling edge to ENET_MDIO output valid (max. propagation delay) | — | 13 | ns |
| M12 | ENET_MDIO (input) to ENET_MDC rising edge setup | 13 | — | ns |
| M13 | ENET_MDIO (input) to ENET_MDC rising edge hold | 0 | — | ns |
| M14 | ENET_MDC pulse width high | 40% | 60% | ENET_MDC period |
| M15 | ENET_MDC pulse width low | 40% | 60% | ENET_MDC period |

[1] The timings assume the following configuration: DSE[5:0] = 001111 and FSEL1[1:0] = 11.
 [2] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [3] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm. Underterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO of the I/O pad output driver.

4.12.3.4 RGMII signal switching specifications

The following timing specifications meet the requirements for RGMII interfaces for a range of transceiver devices.

Table 69. RGMII signal switching specifications^{[1],[2],[3],[4]}

| Symbol | Description | Min. | Max. | Unit |
|--------------------|--|------|------|------|
| T _{cyc} | Clock cycle duration | 7.2 | 8.8 | ns |
| T _{skewT} | Data to clock output skew at transmitter | -500 | 500 | ps |
| T _{skewR} | Data to clock input skew at receiver | 1 | 2.6 | ns |

Table continues on the next page...

Table 69. RGMII signal switching specifications^{[1],[2],[3],[4]...continued}

| Symbol | Description | Min. | Max. | Unit |
|--------|------------------------|------|------|------|
| Duty_G | Duty cycle for Gigabit | 45 | 55 | % |
| Duty_T | Duty cycle for 10/100T | 40 | 60 | % |

- [1] The timings assume the following configuration: DSE[5:0] = 001111 and FSEL1[1:0] = 11.
- [2] Measured as defined in *EIA/JESD 8-6 1995* with a timing threshold voltage of $V_{DDQ}/2$.
- [3] Output timing valid for maximum external load $CL = 15\text{ pF}$, which is assumed to be a 8 pF load at the end of a 50 ohm , unterminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance in the transmission line should be matched closely to the selected R_{DSOn} of the I/O pad output driver.
- [4] RGMII timing specifications are only valid for 1.8 V nominal I/O pad supply voltage.

Figure 33. RGMII transmit signal timing diagram original

Figure 34. RGMII receive signal timing diagram original

4.12.4 LPSPi timing parameters

The Low Power Serial Peripheral Interface (LPSPi) provides a synchronous serial bus with Controller and Peripheral operations. Many of the transfer attributes are programmable. The following tables provide timing characteristics for classic LPSPi timing modes.

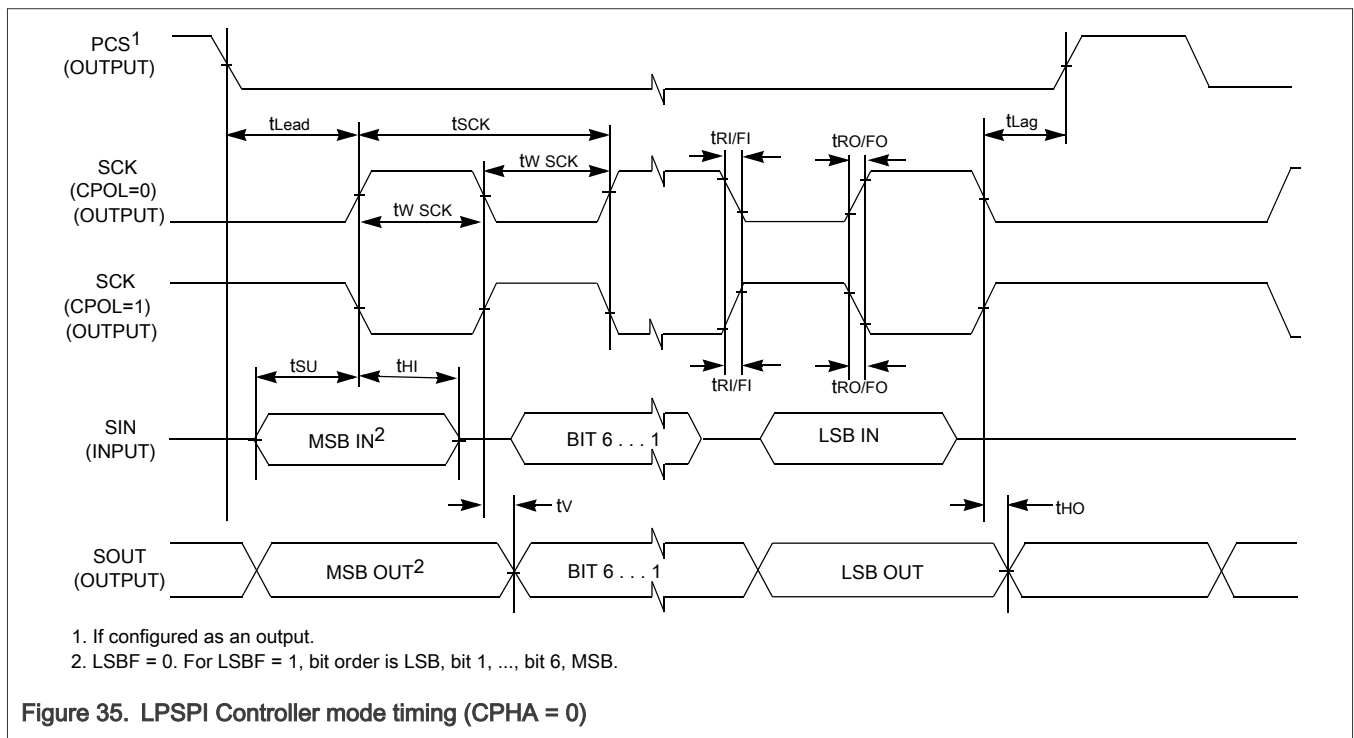

All timing is shown with respect to 20% V_{DD} and 80% V_{DD} thresholds, unless noted, as well as input signal transitions of 3 ns and a 25 pF maximum load on all LPSPi pins.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

Table 70. LPSPI Controller mode timing^{[1],[2]}

| Number | Symbol | Description | Min. | Max. | Units | Note |
|--------|-------------------|---|--------------------------|--------------------------|---------------------|---------|
| 1 | f _{SCK} | Frequency of LPSPI clock ^[3] | — | 30 | MHz | [4] |
| | | | — | 60 | MHz | [5] |
| 2 | t _{SCK} | SCK period | 2 x t _{periph} | — | ns | [6] |
| 3 | t _{Lead} | Enable lead time | 1 | — | t _{periph} | — |
| 4 | t _{Lag} | Enable lag time | 1 | — | t _{periph} | — |
| 5 | t _{WSCK} | Clock (SCK) high or low time | t _{SCK} / 2 - 3 | t _{SCK} / 2 + 3 | ns | — |
| 6 | t _{SU} | Data setup time (inputs) | 8 | — | ns | [7],[8] |
| 7 | t _{HI} | Data hold time (inputs) | 0 | — | ns | [7] |
| 8 | t _V | Data valid (after SCK edge) | — | 2.5 | ns | — |
| 9 | t _{HO} | Data hold time (outputs) | -2.5 | — | ns | — |

- [1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
- [2] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm. Underterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSO of the I/O pad output driver.
- [3] The maximum frequency supported is 52 MHz when NVCC_xxxx operating at 3.3 V.
- [4] The clock driver in the LPSPI module for f_{periph} must guaranteed this limit is not exceeded.
- [5] In Controller loopback mode when LPSPI_CFG1[SAMPLE] bit is 1.
- [6] f_{periph} = Functional clock / (2 ^ PRESCALE) and t_{periph} = 1 / f_{periph}
- [7] If LPSPI_CFG1[SAMPLE] bit is 1, the data setup time (inputs) / data hold time (inputs) specifications are same with the one in Peripheral mode.
- [8] For 3.3 V I/O supply, t_{SU} (Data setup time) parameter value is 9 ns in LPSPI Controller mode.

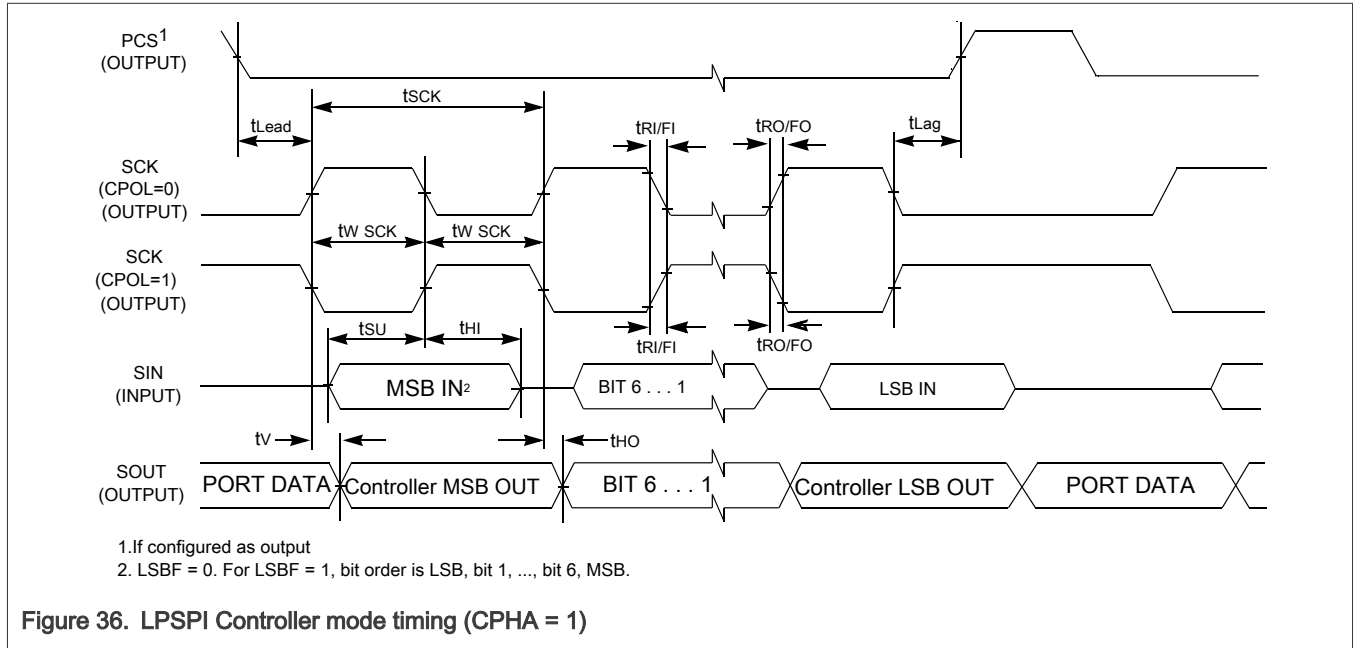

Table 71. LPSPI Peripheral mode timing^{[1],[2]}

| Number | Symbol | Description | Min. | Max. | Units | Note |
|--------|------------|------------------------------|-----------------------|-------------------|--------------|------|
| 1 | f_{SCK} | Frequency of LPSPI clock | 0 | 30 | MHz | — |
| 2 | t_{SCK} | SCK period | $2 \times t_{periph}$ | — | ns | [3] |
| 3 | t_{Lead} | Enable lead time | 1 | — | t_{periph} | — |
| 4 | t_{Lag} | Enable lag time | 1 | — | t_{periph} | — |
| 5 | t_{WSCK} | Clock (SCK) high or low time | $t_{SCK} / 2 - 5$ | $t_{SCK} / 2 + 5$ | ns | — |
| 6 | t_{SU} | Data setup time (inputs) | 3 | — | ns | — |
| 7 | t_{HI} | Data hold time (inputs) | 3 | — | ns | — |
| 8 | t_a | Peripheral access time | — | 20 | ns | [4] |
| 9 | t_{dis} | Peripheral MISO disable time | — | 20 | ns | [5] |
| 10 | t_v | Data valid (after SCK edge) | — | 8 | ns | [6] |
| 11 | t_{HO} | Data hold time (outputs) | 0 | — | ns | — |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [2] Output timing valid for maximum external load $CL = 25$ pF, which is assumed to be a 10 pF load at the end of a 50 ohm. Unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSON of the I/O pad output driver.
 [3] $f_{periph} = \text{Functional clock} / (2^{\wedge} \text{PRESCALE})$ and $t_{periph} = 1 / f_{periph}$
 [4] Time to data active from high-impedance state
 [5] Hold time to high-impedance state
 [6] When operating at 3.3 V I/O supply, this parameter value is 9 ns.

Figure 37. LPSPI Peripheral mode timing (CPHA = 0)

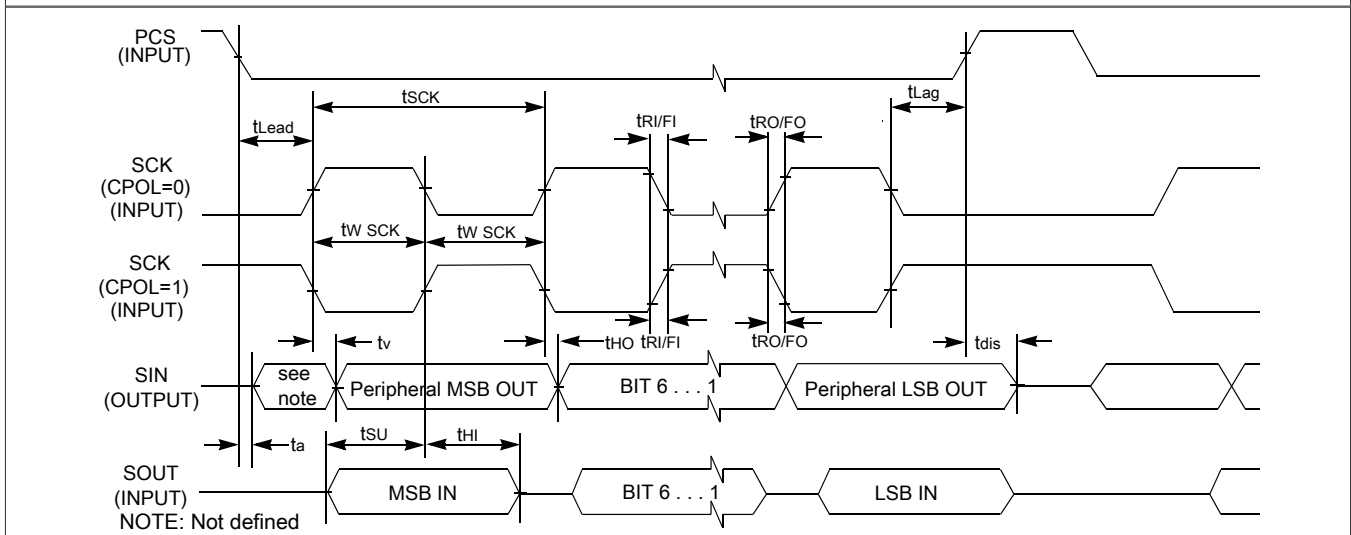

Figure 38. LPSPI Peripheral mode timing (CPHA = 1)

4.12.5 LPI2C timing parameters

LPI2C is a low-power Inter-Integrated Circuit (I2C) module that supports an efficient interface to an I2C bus as a controller and/or as a target.

Table 72. LPI2C module timing parameters^[1]

| Symbol | Description | | Min | Max | Unit | Notes |
|------------------|---------------------|--------------------|-----|-----|------|-------|
| f _{SCL} | SCL clock frequency | Standard mode (Sm) | 0 | 100 | kHz | [2] |
| | | Fast mode (Fm) | 0 | 400 | | |

Table continues on the next page...

Table 72. LPI2C module timing parameters^[1] ...continued

| Symbol | Description | Min | Max | Unit | Notes |
|--------|---------------------------|-----|------|------|-------|
| | Fast mode Plus (Fm+) | 0 | 1000 | | |
| | High speed mode (Hs-mode) | 0 | 3400 | | |
| | Ultra Fast mode (UFm) | 0 | 5000 | | |

[1] For more details, see *UM10204 I2C-bus specification and user manual*.

[2] Standard, Fast, Fast+, and Ultra Fast modes are supported; High speed mode (HS) in target mode.

4.12.6 Improved Inter-Integrated Circuit Interface (I3C) specifications

Unless otherwise specified, I3C specifications are timed to/from the V_{IH} and/or V_{IL} signal points.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

4.12.6.1 I3C Push-Pull Timing Parameters for SDR Mode

I3C interface is not supported on GPIO-Standard-plus pad type for 5 V operation. Measurements are with maximum output load of 30 pF, input transition of 1 ns.

Table 73. I3C Push-Pull Timing Parameters for SDR Mode

| Symbol | Description | Min | Typ | Max | Unit | Condition |
|--------|---|------|------|---|------|---|
| fSCL | SCL Clock Frequency | 0.01 | 12.5 | 12.9 | MHz | F _{SCL} = 1 / (tDIG_L + tDIG_H) |
| tDIG_L | SCL Clock Low Period ^{[1][2]} | 32 | — | — | ns | — |
| tDIG_H | SCL Clock High Period ^[1] | 32 | — | — | ns | — |
| tSCO | Clock in to Data Out for Slave ^[3] ^[4] | — | — | 12 | ns | — |
| tCR | SCL Clock Rise Time ^[5] | — | — | 150e06 * 1 / fSCL (capped at 60) | ns | — |
| tCF | SCL Clock Fall Time ^[5] | — | — | 150e06 * 1 / fSCL (capped at 60) | ns | — |
| tHD_PP | SDA Signal Data Hold in Push-Pull Mode, Slave ^[6] | 1 | — | — | — | Applicable for slave and master loopback modes |
| tSU_PP | SDA Signal Data Setup in Push-Pull Mode | 3 | — | N/A | ns | Applicable for slave and master loopback modes. |

[1] tDIG_L and tDIG_H are the clock Low and High periods as seen at the receiver end of the I3C Bus using V_{IL} and V_{IH} (see Figure 30)

[2] As both edges are used, the hold time needs to be satisfied for the respective edges; i.e., tCF + 3 for falling edge clocks, and tCR + 3 for rising edge clocks.

[3] Devices with more than 12ns of tSCO delay shall set the limitation bit in the BCR, and shall support the GETMXDS CCC to allow the Master to read this value and adjust computations accordingly. For purposes of system design and test conformance, this parameter should be considered together with pad delay, bus capacitance, propagation delay, and clock triggering points.

[4] Pad delay based on 90 Ω / 4 mA driver and 50 pF load. Note that Master may be a Slave in a multi-Master system, and thus shall also adhere to this requirement

- [5] The clock maximum rise/fall time is capped at 60 ns. For lower frequency rise and fall the maximum value is limited at 60 ns, and is not dependent upon the clock frequency.
- [6] t_{HD_PP} is a Hold time parameter for Push-Pull Mode that has a different value for Master mode vs. Slave mode. In SDR Mode the Hold time parameter is referred to as t_{HD_SDR} .

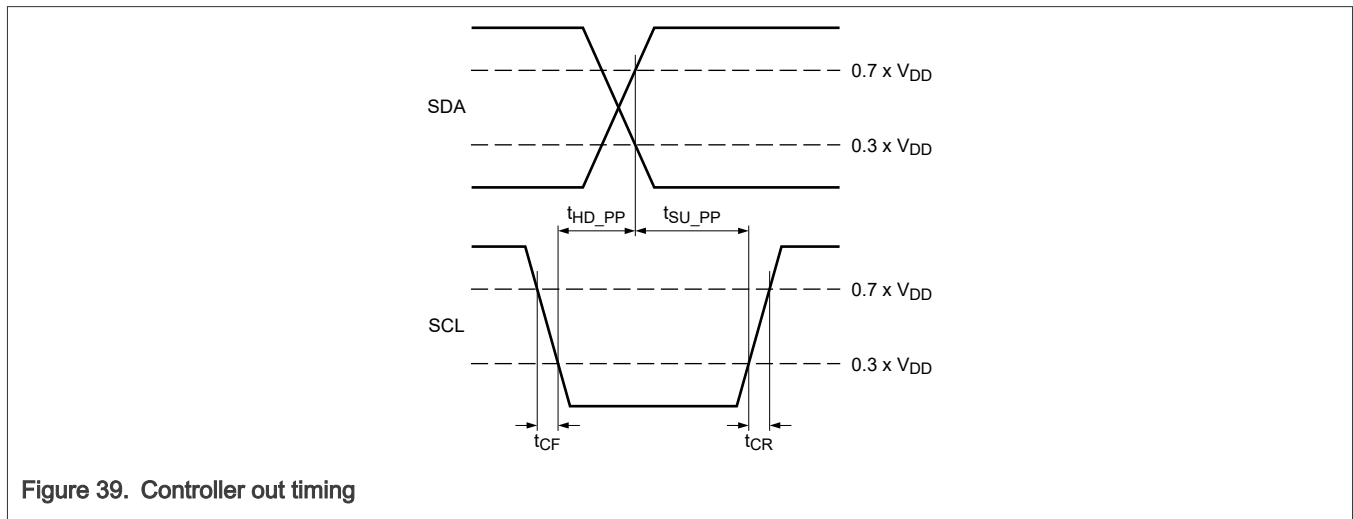

Figure 39. Controller out timing

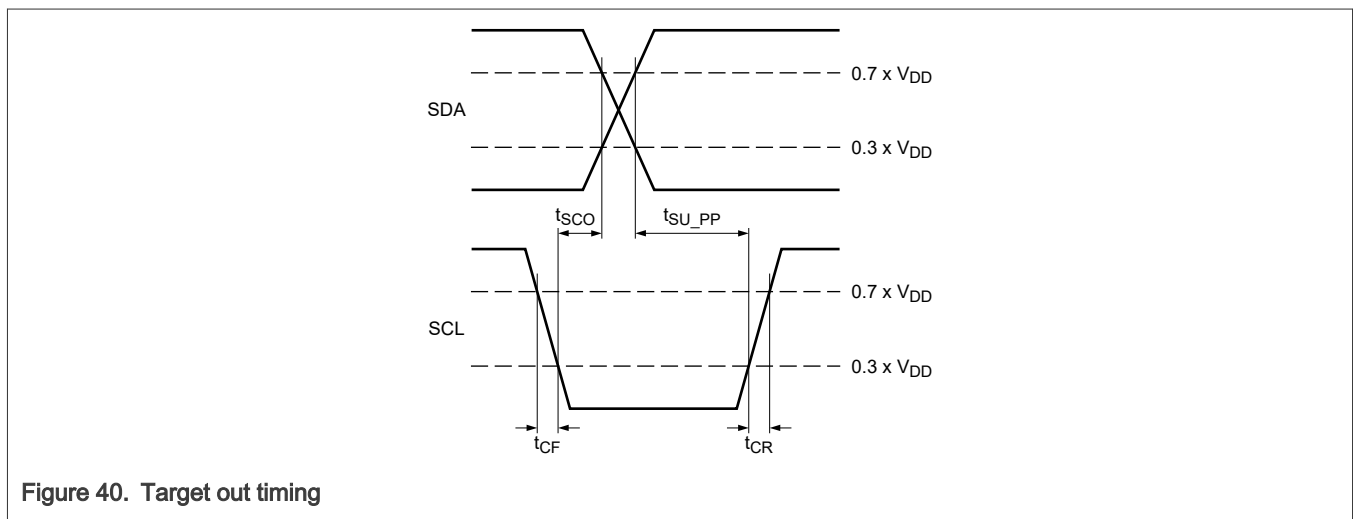

Figure 40. Target out timing

Figure 41. Controller SDR timing

4.12.7 CAN network AC electrical specifications

The Controller Area Network (CAN) module is a communication controller implementing the CAN protocol according to the CAN with Flexible Data rate (CAN FD) protocol and the CAN 2.0B protocol specification. The processor has two CAN modules available. Tx and Rx ports for both modules are multiplexed with other I/O pins. See the IOMUXC chapter of the device reference manual to see which pins expose Tx and Rx pins; these ports are named CAN_TX and CAN_RX, respectively.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

Please see [General purpose I/O \(GPIO\) AC parameters](#) for timing parameters.

Table 74. CAN-FD electrical specifications

| Parameters | FlexCAN (Classical and FD) | Unit |
|----------------------------|----------------------------|------|
| Maximum Baud Rate | 8/8 | Mbps |
| TXD Rise time wcs | 4/4 | ns |
| TXD Fall time wcs | 4/4 | ns |
| RXD Rise time wcs | 4/4 | ns |
| RXD Fall time wcs | 4/4 | ns |
| TXD | 3.3/3.3 | V |
| RXD | 3.3/3.3 | V |
| Internal delay wcs | 100/50 | ns |
| TX PAD delay wcs | 25/25 | ns |
| RX PAD delay wcs | 10/10 | ns |
| TX routing delay wcs | 5/5 | ns |
| RX routing delay wcs | 5/5 | ns |
| Transceiver loop delay wcs | 250/250 | ns |
| Total loop delay | 395/345 | ns |

4.12.8 Timer/Pulse width modulator (TPM) timing parameters

This section describes the output timing parameters of the TPM.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

[Figure 42](#) depicts the timing of the PWM, and [Table 75](#) lists the TPM timing parameters.

Figure 42. TPM timing

Table 75. TPM output timing parameters

| ID | Parameter | Min | Max | Unit |
|----|-----------------------------|-----|------|------|
| | PWM Module Clock Frequency | 0 | 83.3 | MHz |
| P1 | PWM output pulse width high | 12 | — | ns |
| P2 | PWM output pulse width low | 12 | — | ns |

4.12.9 FlexSPI timing parameters

The FlexSPI interface can work in SDR or DDR modes. FlexSPI_n_MCR0[RXCLKSRC] = 0 and FlexSPI_n_MCR0[RXCLKSRC] = 1 configurations are supported when I/O is supplied by 3.3 V and 1.8 V, while FlexSPI_n_MCR0[RXCLKSRC] = 3 configuration is supported when I/O is supplied by 1.8 V only.

Input timing assumes an input signal slew rate of 1 ns (20%/80%) and Output timing valid for maximum external load CL = 15 pF, which is assumed to be a 8 pF load at the end of a 50 ohm, un-terminated, 2-inch microstrip trace on standard FR4 (3.3 pF/inch). For best signal integrity, the series resistance of the transmission line should be matched closely to the selected RDSON of the I/O pad output driver.

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

4.12.9.1 FlexSPI input/read timing

There are three sources for the internal sample clock of FlexSPI read data:

- Dummy read strobe generated by FlexSPI controller and looped back internally (FlexSPI_n_MCR0[RXCLKSRC] = 0x0)
- Dummy read strobe generated by FlexSPI controller and looped back through the DQS pad (FlexSPI_n_MCR0[RXCLKSRC] = 0x1)
- Read strobe provided by memory device and input from DQS pad (FlexSPI_n_MCR0[RXCLKSRC] = 0x3)

The following sections describe input signal timing for each of these three internal sample clock sources.

4.12.9.1.1 SDR mode with FlexSPI_n_MCR0[RXCLKSRC] = 0x0, 0x1

Table 76. FlexSPI input timing in SDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0X0 (Nominal and Overdrive mode)

| Symbol | Parameter | Min | Max | Unit |
|--------|---------------------------------------|-----|-----|------|
| — | Frequency of operation ^[1] | — | 66 | MHz |
| F1 | Setup time for incoming data | 6 | — | ns |
| F2 | Hold time for incoming data | 0 | — | ns |

[1] The maximum frequency supported is 52 MHz when NVCC_XXXX operating at 3.3 V.

Table 77. FlexSPI input timing in SDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0X0 (Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|--------|------------------------------|-----|-----|------|
| — | Frequency of operation | — | 50 | MHz |
| F1 | Setup time for incoming data | 7 | — | ns |
| F2 | Hold time for incoming data | 0 | — | ns |

Table 78. FlexSPI input timing in SDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0X1 (Nominal and Overdrive mode)
[1]

| Symbol | Parameter | Min | Max | Unit |
|--------|---------------------------------------|-----|-----|------|
| — | Frequency of operation ^[2] | — | 166 | MHz |
| F1 | Setup time for incoming data | 1 | — | ns |
| F2 | Hold time for incoming data | 1 | — | ns |

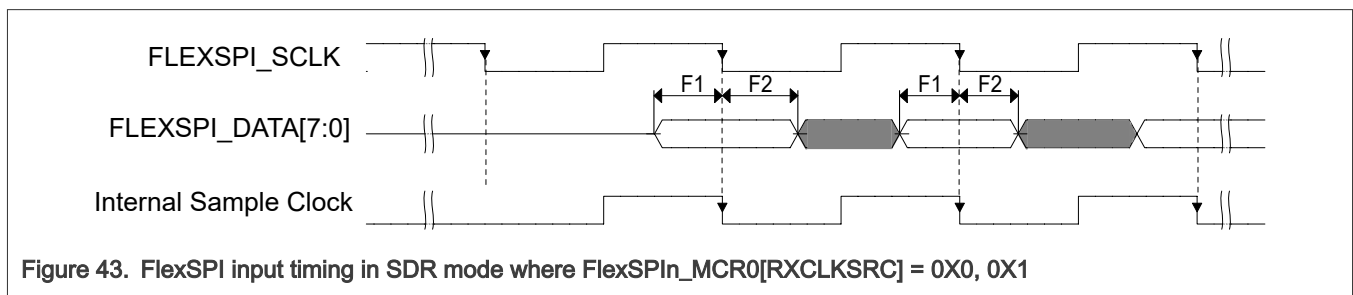

[1] These timing specifications are valid only for 1.8 V nominal I/O pad supply voltage. For 3.3 V I/O supply, see Table 79.

[2] The maximum frequency supported is 52 MHz when NVCC_XXXX operating at 3.3 V.

Table 79. FlexSPI input timing in SDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0X1 (Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|--------|---------------------------------------|-----|-----|------|
| — | Frequency of operation ^[1] | — | 100 | MHz |
| F1 | Setup time for incoming data | 2 | — | ns |
| F2 | Hold time for incoming data | 1 | — | ns |

[1] The maximum frequency supported is 52 MHz when NVCC_XXXX operating at 3.3 V.

Note:

Timing shown is based on the memory generating read data on the SCK falling edge, and FlexSPI controller sampling read data on the falling edge.

4.12.9.1.2 SDR mode with FlexSPI_n_MCR0[RXCLKSRC] = 0x3

There are two cases when the memory provides both read data and the read strobe in SDR mode:

- A1—Memory generates both read data and read strobe on SCK rising edge (or falling edge)

- A2—Memory generates read data on SCK falling edge and generates read strobe on SCK rising edge

Note: In this mode, it is only working under 1.8 V.

Table 80. FlexSPI input timing in SDR mode where FlexSPIn_MCR0[RXCLKSRC] = 0x3 (case A1) (Nominal and Overdrive mode)

| Symbol | Parameter | Min | Max | Unit |
|---|--|------|-----|------|
| — | Frequency of operation | — | 200 | MHz |
| T _{SCKD} | Time from SCK to data valid | — | — | ns |
| T _{SCKDQS} | Time from SCK to DQS | — | — | ns |
| T _{SCKD} - T _{SCKDQS} | Time delta between T _{SCKD} and T _{SCKDQS} | -0.6 | 0.6 | ns |

Table 81. FlexSPI input timing in SDR mode where FlexSPIn_MCR0[RXCLKSRC] = 0x3 (case A1) (Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|---|--|-----|-----|------|
| — | Frequency of operation | — | 133 | MHz |
| T _{SCKD} | Time from SCK to data valid | — | — | ns |
| T _{SCKDQS} | Time from SCK to DQS | — | — | ns |
| T _{SCKD} - T _{SCKDQS} | Time delta between T _{SCKD} and T _{SCKDQS} | -2 | 2 | ns |

Figure 44. FlexSPI input timing in SDR mode where FlexSPIn_MCR0[RXCLKSRC] = 0x3 (case A1)

Note: Timing shown is based on the memory generating read data and read strobe on the SCK rising edge. The FlexSPI controller samples read data on the DQS falling edge.

Table 82. FlexSPI input timing in SDR mode where FlexSPIn_MCR0[RXCLKSRC] = 0x3 (case A2) (Nominal and Overdrive mode)

| Symbol | Parameter | Value | | Unit |
|---|--|-------|-----|------|
| | | Min | Max | |
| — | Frequency of operation | — | 200 | MHz |
| T _{SCKD} | Time from SCK to data valid | — | — | ns |
| T _{SCKDQS} | Time from SCK to DQS | — | — | ns |
| T _{SCKD} - T _{SCKDQS} | Time delta between T _{SCKD} and T _{SCKDQS} | -0.6 | 0.6 | ns |

Table 83. FlexSPI input timing in SDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0x3 (case A2) (Low drive mode)

| Symbol | Parameter | Value | | Unit |
|---|--|-------|-----|------|
| | | Min | Max | |
| — | Frequency of operation | — | 133 | MHz |
| T _{SCKD} | Time from SCK to data valid | — | — | ns |
| T _{SCKDQS} | Time from SCK to DQS | — | — | ns |
| T _{SCKD} - T _{SCKDQS} | Time delta between T _{SCKD} and T _{SCKDQS} | -2 | 2 | ns |

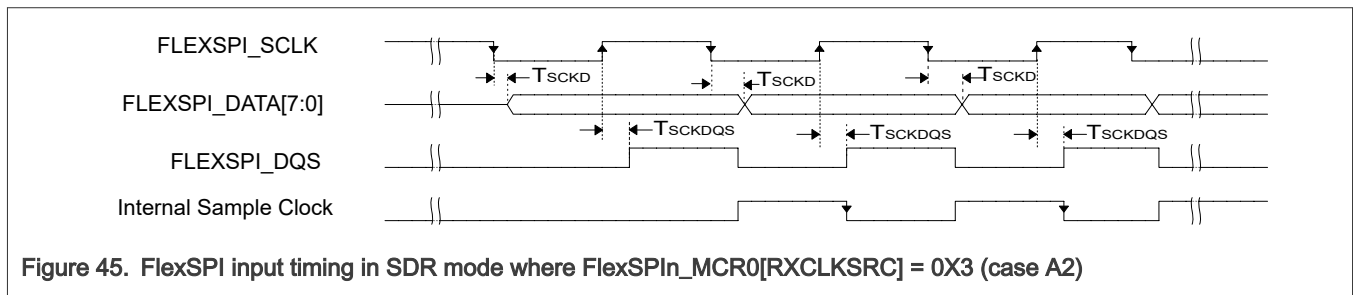

Figure 45. FlexSPI input timing in SDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0X3 (case A2)

Note:

Timing shown is based on the memory generating read data on the SCK falling edge and read strobe on the SCK rising edge. The FlexSPI controller samples read data on a half cycle delayed DQS falling edge.

4.12.9.1.3 DDR mode with FlexSPI_n_MCR0[RXCLKSRC] = 0x0, 0x1

Table 84. FlexSPI input timing in DDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0x0 (Nominal, Overdrive, and Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|--------|------------------------------|-----|-----|------|
| — | Frequency of operation | — | 33 | MHz |
| F1 | Setup time for incoming data | 6 | — | ns |
| F2 | Hold time for incoming data | 0 | — | ns |

Table 85. FlexSPI input timing in DDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0x1 (Nominal and Overdrive mode) [1]

| Symbol | Parameter | Min | Max | Unit |
|--------|---------------------------------------|-----|-----|------|
| — | Frequency of operation ^[2] | — | 83 | MHz |
| F1 | Setup time for incoming data | 1 | — | ns |
| F2 | Hold time for incoming data | 1 | — | ns |

[1] These timing specifications are valid only for 1.8 V nominal I/O pad supply voltage. For 3.3 V I/O supply, see Table 86

[2] The maximum frequency supported is 52 MHz when NVCC_xxxx operating at 3.3 V.

Table 86. FlexSPI input timing in DDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0x1 (Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|--------|---------------------------------------|-----|-----|------|
| — | Frequency of operation ^[1] | — | 66 | MHz |
| F1 | Setup time for incoming data | 1.5 | — | ns |
| F2 | Hold time for incoming data | 1 | — | ns |

[1] The maximum frequency supported is 52 MHz when NVCC_xxxx operating at 3.3 V.

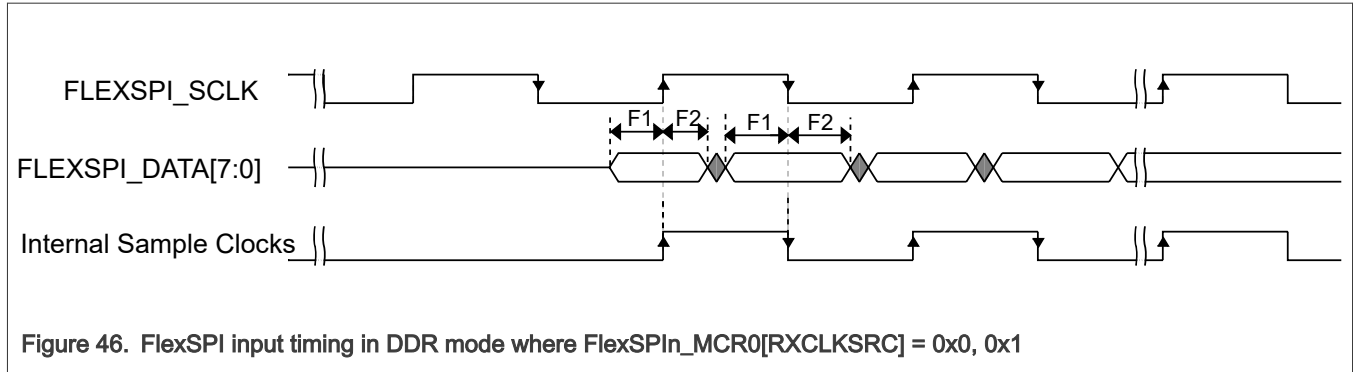

Figure 46. FlexSPI input timing in DDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0x0, 0x1

4.12.9.1.4 DDR mode with FlexSPI_n_MCR0[RXCLKSRC] = 0x3

Note: In this mode, it is only working under 1.8 V.

Table 87. FlexSPI input timing in DDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0x3 (Nominal and Overdrive mode)
[1]

| Symbol | Parameter | Min | Max | Unit |
|---|--|------|-----|------|
| — | Frequency of operation | — | 200 | MHz |
| T _{SCKD} | Time from SCK to data valid | — | — | ns |
| T _{SCKDQS} | Time from SCK to DQS | — | — | ns |
| T _{SCKD} - T _{SCKDQS} | Time delta between T _{SCKD} and T _{SCKDQS} | -0.6 | 0.6 | ns |

[1] These timing specifications are valid only for 1.8 V nominal I/O pad supply voltage.

Table 88. FlexSPI input timing in DDR mode where FlexSPI_n_MCR0[RXCLKSRC] = 0x3 (Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|---|--|------|-----|------|
| — | Frequency of operation | — | 133 | MHz |
| T _{SCKD} | Time from SCK to data valid | — | — | ns |
| T _{SCKDQS} | Time from SCK to DQS | — | — | ns |
| T _{SCKD} - T _{SCKDQS} | Time delta between T _{SCKD} and T _{SCKDQS} | -0.9 | 0.9 | ns |

4.12.9.2 FlexSPI output/write timing

The following sections describe output signal timing for the FlexSPI controller including control signals and data outputs.

4.12.9.2.1 SDR mode

Table 89. FlexSPI output timing in SDR mode (Nominal and Overdrive mode)^[1]

| Symbol | Parameter | Min | Max | Unit |
|------------------|--|--|-----|------|
| — | Frequency of operation ^[2] | — | 200 | MHz |
| T _{ck} | SCK clock period | 5 | — | ns |
| T _{DVO} | Output data valid time | — | 0.6 | ns |
| T _{DHO} | Output data hold time | -0.6 | — | ns |
| T _{CSS} | Chip select output setup time ^[3] | (T _{CSS} + 0.5) x T _{ck} - 0.6 | — | ns |
| T _{CSH} | Chip select output hold time ^[3] | (T _{CSH} x T _{ck}) - 0.6 | — | ns |

[1] These timing specifications are valid only for 1.8 V nominal I/O pad supply voltage. For 3.3 V I/O supply, see Table 90

[2] The maximum frequency supported is 52 MHz when NVCC_XXXX operating at 3.3 V.

[3] T_{CSS} and T_{CSH} are configured by the FlexSPI7_FLSHxCR1 register. See i.MX 93 Applications Processor Reference Manual (IMX93RM) for more details.

Table 90. FlexSPI output timing in SDR mode (Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|------------------|---|--|--------------------|------|
| — | Frequency of operation ^[1] | — | 133 ^[2] | MHz |
| T _{ck} | SCK clock period | 7.5 | — | ns |
| T _{DVO} | Output data valid time | — | 2 | ns |
| T _{DHO} | Output data hold time | -2 | — | ns |
| T _{CSS} | Chip select output setup time | (T _{CSS} + 0.5) x T _{ck} - 2 | — | ns |
| T _{CSH} | Chip select output hold time ^[3] | (T _{CSH} x T _{ck}) - 2 | — | ns |

- [1] The maximum frequency supported is 52 MHz when NVCC_XXXX operating at 3.3 V.
- [2] The actual maximum frequency supported is limited by the FlexSPI_n_MCR0[RXCLKSRC] configuration used, see the FlexSPI SDR input timing specifications.
- [3] T_{CSS} and T_{CSH} are configured by the FlexSPI_n_FLSHAXCR1 register. See i.MX 93 Applications Processor Reference Manual (IMX93RM) for more details.

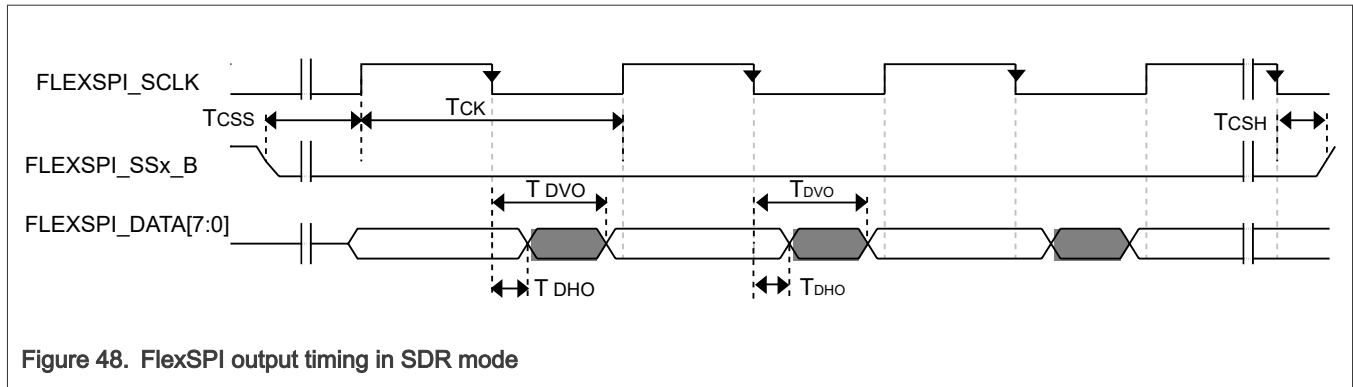

Figure 48. FlexSPI output timing in SDR mode

4.12.9.2.2 DDR mode

Table 91. FlexSPI output timing in DDR mode (Nominal and Overdrive mode)^[1]

| Symbol | Parameter | Min | Max | Unit |
|------------------|---|---|-------|------|
| — | Frequency of operation ^[2] | — | 200 | MHz |
| T _{ck} | SCK clock period | 5 | — | ns |
| T _{DVO} | Output data valid time | — | 1.815 | ns |
| T _{DHO} | Output data hold time | 0.615 | — | ns |
| T _{CSS} | Chip select output setup time | (T _{CSS} + 0.5) x T _{ck} - 0.6 | — | ns |
| T _{CSH} | Chip select output hold time ^[3] | (T _{CSH} + 0.5) x T _{ck} - 0.6 | — | ns |

- [1] These timing specifications are valid only for 1.8 V nominal IO pad supply voltage. see Table 92
- [2] The maximum frequency supported is 52 MHz when NVCC_XXXX operating at 3.3 V.
- [3] T_{CSS} and T_{CSH} are configured by the FlexSPI_n_FLSHAXCR1 register. See i.MX 93 Applications Processor Reference Manual (IMX93RM) for more details.

Table 92. FlexSPI output timing in DDR mode (Low drive mode)

| Symbol | Parameter | Min | Max | Unit |
|------------------|--|---|--------------------|------|
| — | Frequency of operation ^[1] | — | 133 ^[2] | MHz |
| T _{ck} | SCK clock period | 7.5 | — | ns |
| T _{DVO} | Output data valid time | — | 2.75 | ns |
| T _{DHO} | Output data hold time | 0.9 | — | ns |
| T _{CSS} | Chip select output setup time ^[3] | (T _{CSS} + 0.5) x T _{ck} - 0.9 | — | ns |

Table continues on the next page...

Table 92. FlexSPI output timing in DDR mode (Low drive mode) ...continued

| Symbol | Parameter | Min | Max | Unit |
|------------------|---|---|-----|------|
| T _{CSH} | Chip select output hold time ^[3] | (T _{CSH} + 0.5) x T _{ck} - 0.9 | — | ns |

[1] The maximum frequency supported is 52 MHz when NVCC_xxxx operating at 3.3 V.
 [2] The actual maximum frequency supported is limited by the FlexSPI_n_MCR0[RXCLKSRC] configuration used, see the FlexSPI DDR input timing specifications.
 [3] T_{CS} and T_{CSH} are configured by the FlexSPI_n_FLSHAxCR1 register. See i.MX 93 Applications Processor Reference Manual (IMX93RM) for more details.

Figure 49. FlexSPI output timing in DDR mode

4.12.10 LPUART I/O configuration and timing parameters

See [General purpose I/O \(GPIO\) AC parameters](#).

4.12.11 Flexible I/O controller (FlexIO) electrical specifications

The DSE[5:0] = 001111 and FSEL1[1:0] = 11 are required drive settings to meet the timing.

Table 93 shows FlexIO timing specifications.

Table 93. FlexIO timing specifications^{[1],[2]}

| Symbol | Descriptions | Min | Typ | Max | Unit | Notes |
|------------------|--|-----|-----|-----|------|-------|
| t _{ODS} | Output delay skew between any two FlexIO_Dx pins configured as outputs that toggle on same internal clock cycle | 0 | — | 12 | ns | [3] |
| t _{IDS} | Input delay skew between any two FlexIO_Dx pins configured as inputs that are sampled on the same internal clock cycle | 0 | — | 12 | ns | [3] |

[1] Input timing assumes an input signal slew rate of 3 ns (20%/80%).
 [2] Output timing valid for maximum external load CL = 25 pF, which is assumed to be a 10 pF load at the end of a 50 ohm. Unterminated, 5-inch microstrip trace on standard FR4 (3.3 pF/inch), (25 pF total with margin). For best signal integrity, the series resistance in the transmission line should be equal to the selected RDSON of the I/O pad output driver.
 [3] Assume pins muxed on same VDD_IO domain with same load.

4.12.12 USB PHY parameters

The USB PHY parameters meet the electrical compliance requirements listed as following:

- *Universal Serial Bus Revision 2.0 Specification* (including ECNs and errata), *On-The-Go and Embed-ded Host Supplement to the Universal Serial Bus Revision 2.0 Specification* (including ECNs and errata)

4.12.12.1 Pad/Package/Board connections

The USBx_VBUS pin cannot directly connect to the 5 V VBUS voltage on the USB2.0 link.

Each USBx_VBUS pin must be isolated by an external 30 KΩ 1% precision resistor.

The USB 2.0 PHY uses USBx_TXRTUNE and an external resistor to calibrate the USBx_DP/DN 45 Ω source impedance. The external resistor value is 200 Ω 1% precision on each of USBx_TXRTUNE pad to ground.

5 Boot mode configuration

This section provides information on boot mode configuration pins allocation and boot devices interfaces allocation.

i.MX 93 supports three different boot modes:

- Normal Boot Mode
- Boot from Internal Fuse Mode
- Serial Download Boot Mode

Three different boot modes can be either selected via different boot mode pins or overridden by fuses.

i.MX 93 has two kinds of boot type:

- Single Boot: Cortex[®]-A55 core is in charge of loading all containers and images, while Cortex[®]-M33 core is doing nothing except waiting Cortex[®]-M33 firmware is loaded and available during boot.
- Low Power Boot (LPB): only Cortex[®]-M33 core is running after POR. Cortex[®]-A55 core cannot be triggered by Cortex[®]-M33 firmware.

For detailed boot mode configuration, see the "Fuse Map" and the "System Boot" chapter in *i.MX 93 Reference Manual (IMX93RM)*.

5.1 Boot mode configuration pins

There are four boot mode pins used to select boot mode.

Table 94. Fuses and associated pins used for boot

| BOOT_MODE[3:0] | Function |
|----------------|-------------------------------|
| x000 | Boot from Internal Fuses |
| 0001 | Serial Download (USB1) |
| 0010 | uSDHC1 8-bit eMMC 5.1 |
| 0011 | uSDHC2 4-bit SD 3.0 |
| 0100 | FlexSPI Serial NOR |
| 0101 | FlexSPI Serial NAND 2K |
| 0110 | Reserved |
| 0111 | Reserved |
| 1000 | LPB: Boot from Internal Fuses |

Table continues on the next page...

Table 94. Fuses and associated pins used for boot ...continued

| BOOT_MODE[3:0] | Function |
|----------------|----------------------------------|
| 1001 | LPB: Serial Downloader (USB1) |
| 1010 | LPB: uSDHC1 8-bit 1.8 V eMMC 5.1 |
| 1011 | LPB: uSDHC2 4-bit SD 3.0 |
| 1100 | LPB: FlexSPI Serial NOR |
| 1101 | LPB: FlexSPI Serial NAND 2K |
| 1110 | Reserved |
| 1111 | Reserved |

- HW samples the boot CFG pins before ROM starts, these pins should be mapped to Boot CFG pins by default.
- Once HW samples the boot CFG pins and stores the boot CFG in CMC register, the register should be latched. The register value is no more changes and reflecting the pins status.

Additional boot options are also supported for both Normal Boot Mode and Internal Fuse mode:

- All boot modes support for a range of speeds, timings, and protocol formats;
- eMMC and SD boot can be supported from any USDHC instance 1 or 2;
- Serial NOR boot supports for 1-bit, 4-bit, and 8-bit mode;
- Serial NAND boot supports for 1-bit, 4-bit, and 8-bit mode (8-bit Serial NAND)

BOOT_MODE pins are multiplexed over other functional pins. The functional I/O that are multiplexed with these pins must be selected subject to two criteria:

- Functional I/O must not be used if they are inputs to the SoC, which could potentially be constantly driven by external components. Such functional mode driving may interfere with the need for the board to pull these pins a certain way while POR is asserted.
- Functional I/O must not be used if they are outputs of the SoC, which will be connected to components on the board that may misinterpret the signals as valid signals if they are toggled (such as, the board drives them while POR is asserted).

5.2 Boot device interface allocation

i.MX 93 supports three kinds of boot devices:

- Primary Boot Device

The primary boot device is selected by Boot Config pins if boot mode is the Normal Boot or Internal Fuses Boot. The valid primary boot device options are SD/eMMC/FlexSPI NOR/FlexSPI NAND. The valid options also depend on the Boot Type and other fuses configuration.

- Recovery Boot Device

After failure of booting from Primary Boot Device, i.MX 93 tries to boot from another boot source. The recovery boot device is only from SPI1/2/3/4.

- Serial Download Boot Device

Both Cortex[®]-M33 and Cortex[®]-A55 support serial download mode via USB1.

The following tables list the interfaces that can be used by the boot process in accordance with the specific boot mode configuration. The tables also describe the interface's specific modes and IOMUXC allocation, which are configured during boot when appropriate.

Table 95. Boot through FlexSPI

| Signal name | PAD name | ALT |
|----------------|------------|------|
| FlexSPIA_DATA0 | SD3_DATA0 | ALT1 |
| FlexSPIA_DATA1 | SD3_DATA1 | ALT1 |
| FlexSPIA_DATA2 | SD3_DATA2 | ALT1 |
| FlexSPIA_DATA3 | SD3_DATA3 | ALT1 |
| FlexSPIA_DQS | SD1_STROBE | ALT1 |
| FlexSPIA_SS0_B | SD3_CMD | ALT1 |

USB1 interfaces are dedicated pins, thus no IOMUX options.

6 Package information and contact assignments

This section includes the contact assignment information and mechanical package drawing.

6.1 14 x 14 mm package information

6.1.1 14 x 14 mm, 0.65 mm pitch, ball matrix

[Figure 50](#) shows the top, bottom, and side views of the 14 x 14 mm FCBGA package.

FC-PBGA-306 I/O
14 X 14 X 1.144 PKG, 0.65 PITCH

SOT2177-1

RELEASED FOR EXTERNAL ASSEMBLY ONLY. THIS DESIGN ONLY MEETS EXTERNAL DESIGN AND ASSEMBLY RULES. MUST BE REVIEWED AND UPDATED BEFORE BEING ASSEMBLED INTERNALLY.

| Document ID | Release date | Description |
|----------------|--------------|--|
| | | <ul style="list-style-type: none"> Updated LVDS Ball name in Table 4 Replace the text from "The power architecture of i.MX93 is defined based on the assumption that a PMIC is used to supply all the power rails to the SoC. The SoC can be powered from discrete parts rather than a PMIC, but a discrete-based solution is not necessarily BOM cost-optimized." to "The i.MX power architecture is designed with the expectation that a dedicated PMIC supplies all required power rails, ensuring compliance with stringent power-up and power-down sequencing requirements. While discrete component-based implementations are technically viable, they typically lead to increased BOM cost, greater design complexity, and a larger PCB footprint. In contrast, the proposed PMIC solution is BOM-optimized, minimizes board area by integrating multiple power functions into a single package, and simplifies system design by providing a validated, production-tested power management solution that inherently meets the voltage and sequencing specifications of the i.MX platform." in Power architecture section. Updated Figure 3 |
| IMX93IEC v.6.1 | 07 July 2025 | <ul style="list-style-type: none"> Removed the I/O pin information from Ordering information Updated the Package type in Figure 1 |
| IMX93IEC v.6.0 | 04 June 2025 | <ul style="list-style-type: none"> Updated Ordering information Updated Figure 1 Updated the descriptions about DRAM and LPUART, and ADC in Table 1; Removed FlexIO from Table 1 Added LPDDR4 in Figure 2; updated ADC and LPUART in Figure 2 Updated the description about ONOFF and XTALI_24/XTALO_24M in Table 3 Added Table 13 Updated Table 17 Updated Table 29 Updated the description of DDR SDRAM-specific parameters (LPDDR4/LPDDR4X) and Clock/data/command/address pin allocations Added a footnote in Table 45 Added a footnote in Table 52 Updated the unit of C_{sample}, $C_{compare}$, and $C_{conversion}$ to cycle in Table 53; removed the maximum value of $C_{compare}$ and second ADC clock in Table 53; added ENOB values in Table 53 Removed Table. ADC electrical specifications ($V_{REFH} = VDD_{ANAx_1p8}$ and $VADIN_{max} \leq V_{REFH}$) Added a footnote in Table 70 Updated Table 73 Removed BCAN, BCANXL, and minimum operating frequency from Table 74 |

Data sheet status

| Document status ^{[1][2]} | Product status ^[3] | Definition |
|-----------------------------------|-------------------------------|---|
| Objective [short] data sheet | Development | This document contains data from the objective specification for product development. |
| Preliminary [short] data sheet | Qualification | This document contains data from the preliminary specification. |
| Product [short] data sheet | Production | This document contains the product specification. |

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <https://www.nxp.com>.

Definitions

Draft — A draft status on a document indicates that the content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included in a draft version of a document and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms and conditions of commercial sale of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <https://www.nxp.com/profile/terms>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Quick reference data — The Quick reference data is an extract of the product data given in the Limiting values and Characteristics sections of this document, and as such is not complete, exhaustive or legally binding.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Suitability for use in non-automotive qualified products — Unless this document expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.

HTML publications — An HTML version, if available, of this document is provided as a courtesy. Definitive information is contained in the applicable document in PDF format. If there is a discrepancy between the HTML document and the PDF document, the PDF document has priority.

Translations — A non-English (translated) version of a document, including the legal information in that document, is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.

Security — Customer understands that all NXP products may be subject to unidentified vulnerabilities or may support established security standards or specifications with known limitations. Customer is responsible for the design and operation of its applications and products throughout their lifecycles to reduce the effect of these vulnerabilities on customer's applications and products. Customer's responsibility also extends to other open and/or proprietary technologies supported by NXP products for use in customer's applications. NXP accepts no liability for any vulnerability. Customer should regularly check security updates from NXP and follow up appropriately.

Customer shall select products with security features that best meet rules, regulations, and standards of the intended application and make the ultimate design decisions regarding its products and is solely responsible for compliance with all legal, regulatory, and security related requirements concerning its products, regardless of any information or support that may be provided by NXP.

NXP has a Product Security Incident Response Team (PSIRT) (reachable at PSIRT@nxp.com) that manages the investigation, reporting, and solution release to security vulnerabilities of NXP products.

NXP B.V. — NXP B.V. is not an operating company and it does not distribute or sell products.

| 4.6 | I/O AC parameters..... | 29 | 6.2.2 | 11 x 11 mm supplies contact assignments and functional contact assignments..... | 102 |
| 4.6.1 | General purpose I/O (GPIO) AC parameters..... | 30 | 6.2.3 | 11 x 11 mm, 0.5 mm pitch, ball map..... | 112 |
| 4.6.2 | DDR I/O AC electrical characteristics..... | 31 | 6.3 | 9 x 9 mm package information..... | 117 |
| 4.6.3 | LVDS AC Parameters..... | 32 | 6.3.1 | 9 x 9 mm, 0.5 mm pitch, ball matrix..... | 117 |
| 4.7 | Differential I/O output buffer impedance..... | 33 | 6.3.2 | 9 x 9 mm supplies contact assignments and functional contact assignments..... | 119 |
| 4.7.1 | DDR I/O output impedance..... | 33 | 6.3.3 | 9 x 9 mm, 0.5 mm pitch, ball map..... | 126 |
| 4.8 | System modules timing..... | 33 | 6.4 | DDR pin function list..... | 130 |
| 4.8.1 | Reset timing parameters..... | 33 | 7 | Revision history..... | 131 |
| 4.8.2 | WDOG Reset timing parameters..... | 33 | | Legal information..... | 136 |
| 4.8.3 | JTAG timing parameters..... | 34 | | | |
| 4.8.4 | SWD timing parameters..... | 35 | | | |
| 4.8.5 | DDR SDRAM-specific parameters (LPDDR4/LPDDR4X)..... | 36 | | | |
| 4.9 | Display and graphics..... | 37 | | | |
| 4.9.1 | MIPI D-PHY electrical characteristics..... | 37 | | | |
| 4.9.2 | LCD Controller (LCDIF) timing parameters..... | 40 | | | |
| 4.10 | Audio..... | 41 | | | |
| 4.10.1 | SAI switching specifications..... | 41 | | | |
| 4.10.2 | SPDIF timing parameters..... | 44 | | | |
| 4.10.3 | PDM Microphone interface timing parameters..... | 45 | | | |
| 4.10.4 | Medium Quality Sound (MQS) electrical specifications..... | 46 | | | |
