Input Differential Voltage Range	V_{IDR}	Note 1	V
Input Voltage Range	V_{IR}	Note 1	V
Junction Temperature (Note 2)	T_J	+150	°C
Operating Temperature Range	T_A	-40 to +125	°C
Storage Temperature Range	T_{stg}	-55 to +150	°C
DC Output Current	I_O	1.0	A
Peak Output Current (Nonrepetitive) > 1 ms Duration < 1 ms Duration (Note 3)	$I_{(max)}$	1.5 2.0	A
Thermal Resistance, Junction-to-Air	$R_{\theta JA}$	80	°C/W
Thermal Resistance, Junction-to-Case	$R_{\theta JC}$	12	°C/W

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected. Operating the device outside its recommended conditions, but still within its maximum rated limits may not cause immediate damage. However, doing so can lead to reduced performance, unpredictable behavior, and potentially shorten the device's lifespan or reliability.

1. Either or both input voltages should not exceed the magnitude of V_{CC} or V_{EE} .
2. Power dissipation must be considered to ensure maximum junction temperature (T_J) is not exceeded.
3. When driving inductive loads, negative flyback voltage/current excursions may need to be constrained with Schottky diodes to protect the output drivers.

For circuit stability, ensure that $R_x > \frac{2R_3 \cdot R_1}{R_M}$ where, R_M = internal resistance of motor.
The voltage available at the terminals of the motor is: $V_M = 2(V_1 - \frac{V_S}{2}) + |R_0| \cdot I_M$
where, $|R_0| = \frac{2R_3 \cdot R_1}{R_x}$ and I_M is the motor current.
